3803. RFI in vehicle

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-10 00:00:00 UTC
From: alang@pathcom.com
Message-ID: <35f7df32.1262780@news.pathcom.com>
Source record: 162161

I am having a problem with RFI in my vehicle. After installing my dual band mobile (Kenwood G707), I found I get RFI while the radio is monitoring frequencies. I have found that the antenna is picking up an emitted signal from the vehicle computer. This only occurs when the temperature reaches about 21 degrees celcius (70 degrees farenheit). All other times the radio is quiet. This also occurred with my previously installed dual band radio, so I now know and have confirmed it is the antenna that picks up the signal. I have no idea what in the computer would emit a signal strong enough to be picked up by the antenna. My installed 10 metre radio is always quiet, as is the AM-FM radio.
I have a 1992 Chevrolet pick up truck.
Has anyone else experienced this problem? Is there a solution?

For Sale : Rohn Model S.S.V. 150' Self-Supporting Tower

20' sections with (1) one 10' top section and a 3 ' mast mounting section . The steel is on the ground (blocked) in Burton Ohio about 20 to 25 miles east of Cleveland , 4 miles west of Middlefield Ohio . The bottom sections (3) are bolted the remaining are welded members . The tower has been on the ground for about a year and is 7 to 8 years old . In use it supported a VHF stationmaster antenna and had provisions for some type of side mount that was never used . The basic condition is good , with some surface rust on the top sections

This Tower was designed with VHF , UHF and beyond in mind. Not a HF supporting structure ...

40' to 190' Model SSV Towers 90MPH wind speed ANSI/EIA222D (NO ICE) SSI120D90 (Rohn#) at 120' with 8N Base ... Face spread 8' 6 3/4" at base Projected area Sq Ft Tower Top 8.3 rounds 5.0 flats , 30' below tower top 11.7 rounds 7.0 flats . Assumes one 7/8" line to top , two 7/8" lines 30' below top sections are 8N , 7N , 6N , 5N , 4N , 3WN < 120 ' , 2W and 1WB (10') make last 30'

Really Michael, sure I do. I carry those around in my shirt pocket
just incase I meet some idiot like you demanding "legal" proof of every
thing I may say. Grow up and get real Michael, This is no court of law
and you will never be a lawyer, at least not in my life time. This is
Stinking News Group, and here we offer up opinions, at least some do.
Others like yourself sit there and Demand Proof citing numbers ect. How
small your mind is becoming. Go back inside and play with your dolls if
that is all you can come up with.

Shouldn't be an issue? Shame on you Michael, you have now joined a very
select and growing group that believes free speech comes without
responsibility to those around you and in this case where ever that
signal may land. My statement suggests that the FCC has given up on
trying to attack vulgar and obcene language on the air because Judges
all over the land continue to throw the cases out. ACLU lawyers are
lined up 6 deep (ill send photos to confirm soon) to defend these pieces
of trash. Therefore, as I stated, you have to be guilty of something
like out of band, (over the edge even unintentionally works) which we
all know is so much more disruptive than the trash that is now condoned.

Errr, so you have now counted them all any you have that number? And
are we to accept your asertion that the only offenders on HF are on
14.313 and 3850? Shame on you for thinking so shallow. If you only
checked those two freqs, you are way short on your count. Try again.

>

So you believe the concept that from 100 people randomly selected in
this country, more would be bad than would be good, and you define both
elements please, so I may judge your objectivness here. I happen to
think otherwise.

>
> >Two, What makes you think what you heard on 27mz was only CBers? You

Then that makes them double offenders. But if you run out of band, what
dif does it make if you use a little more pwr//? The statement is to
show that CBers are not the only problem when you discuss radio
communication. Yet there are elitists constantly straining their
fingers pointing at those 0n 27mz as CBers and Trouble Makers when some
of us know your Brothers in Hamdom are there also. BTW, some of them
bring more than 100w to 27mz.

You know Coyle, your statement just hit a serious nerve and I will
soothe it my asking you some serious questions to determin just what
credentials you may be citing in determining lazyness here.

What kind of car do you drive? If not Mercedes or better, are you
lazy?

How many bedrooms in your home? If not 16 or more, are you just lazy?

What class pilots license do you hold? If not ATP, are you just lazy?

You elitists assume everyone wishes to be just like you and if not they
must have a defect somewhere.

Get a grip man and find another horse, that one is tired.

Hello

Im sending this email to give you the latest information on
AirNav, the Aircraft Tracking Software.

It is already possible to download more AirNav Maps from AirNav
homepage.

AirNav Maps:
The collection now includes more than 30 maps for many parts of
the world.
New additions were made including many maps for USA, Canada and
Europe.
To install these maps just download and unzip them. That's all.

If you want to get more information on this just go to AirNav
homepage at

http://fly.to/airnav and follow Data Files Link.

In the homepage, it's also possible to download the latest full
version of the program and register it Online. You will receive your
unlock codes within 12 hours.
Hope this info is of your interest.

Best regards, Andre Brandao

Um, wrong. I ordered the mic from HRO in Denver just 2 months ago, and it
was $50.00. AES, and several others were all the same price.

Just because the FCC has fallen down on their job, we shouldn't
encourage use of dirty transmitters. While a *new* spectrum
analyzer may cost $40,000, perfectly servicable older units can
be had for well under $1,000. You can even *build* one, there was
a construction article in QST the last two issues, and Science
Workshop still sells their kit based on a TV tuner. Simple, cheap,
and adequate to see if your transmitter is clean. With a bit of
patience, you can even bench check it with a general coverage
receiver and an attenuator. Failing all that, at least take it to a
friend who *does* have the proper test equipment before putting
it on the air. There's no reason to interfere with other amateurs
because you don't personally own the test equipment to certify
that your Tx meets FCC specs.

3823. Back to the future

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-10 00:00:00 UTC
From: k0hb@juno.COM
Message-ID: <19980910.130114.6510.2.k0hb@juno.com>
Source record: 162181

There's a lot of resistance to changes in the structure of our
Amateur Radio Service. I propose we throw out *all* the changes,
and go back to the original requirement, as laid out in the
following excerpt from "Regulations governing Radio Communication",
published by the Bureau of Navigation, US Department of Commerce
and Labor, dated Sept 28, 1912, concerning amateur license classes.

First grade.--The applicant must have a sufficient knowledge
of the adjustment and operation of the apparatus, and of the
regulations of the International Convention and acts of Congress
in so far as they relate to interference with other radio
communication and impose certain duties on all grades of operators.
The applicant must be able to transmit and receive in Continental
Morse, but no speed rate will be prescribed. Applicants for licenses
of this grade residing at or near any place where examinations are
held will communicate with examining officers and will be examined
and receive licenses of amateur grades. At places in seaboard
States, remote from examining officers, applicants will file
applications with the radio inspector, who will endeavor to arrange
for examinations on his inspection trips.

Second grade.--The requirements for the second grade will be the
same as for the first grade. The second-grade license will be issued
where an applicant can not be examined or until he can be examined.
An examining officer or radio inspector is authorized in his
discretion to waive an actual examination of an applicant for an
amateur license, if the amateur for adequate reasons can not present
himself for examination but in writing can satisfy the examining
officer or radio inspector that he is qualified to hold a license
and will conform to its obligations.

Seems straight-forward to me.

But even back then, even before meetings of the ARRL BoD, there were
those who couldn't leave well enough alone, and less than 5 months
later, on Feb 20, 1913, the first of the changes which led to our
current mess were made. In a new edition of the rules issued on that
date,
the following sentence was added to the requirement for a First Grade
license:

"A speed of at least five words per minute (five letters to the
word) must be attained."

No particular reason is given for this change, or for that matter, for
the

Morse test requirement.

Hey, it gets more complicated every year! On July 1, 1913, they established the "Extra Grade" license, but it was not for hams! Clearly we need an ARRL BoD meeting to address this, but so far this is no ARRL to have such meetings.

Extra grade.--The Department desires to establish, if practicable, a corps of specially trained and trustworthy radio operators who may be available for Government service. For this purpose a special license will be issued to operators holding the commercial first-grade license, whose certificates of skill in radio communication,
issued under the act of June 24, 1910, and licenses under this act record 12 months' satisfactory ocean service as shown by masters' indorsement. A special examination in the radio regulations of the United States Navy will also be required. The commercial extra-grade license will be issued during 1913, and will be the subject of a special circular.

A year after that, dated July 27th, 1914, we finally get a *reason* for the
Morse test requirement.

122. Amateur first grade.--The applicant must have a sufficient knowledge of the adjustment and operation of the apparatus which he wishes to operate and of the regulations of the International Convention and acts of Congress in so far as they relate to interference with other radio communication and impose certain duties on all grades of operators. The applicant must be able to transmit and receive in Continental Morse at a speed sufficient to enable him to recognize distress calls or the official "keep-out" signals. A speed of at least five words per minute (five letters to the word) must be attained.

123. Amateur second grade.--The requirements for the second grade will be the same as for the first grade. The second-grade license will be issued only where an applicant can not be personally examined or until he can be examined. An examining officer or radio inspector is authorized in his discretion to waive an actual examination of an applicant for an amateur license, if the amateur for adequate reasons can not present himself for examination but in writing can satisfy the examining officer or radio inspector that he is qualified to hold a license and will conform to its obligations.

And we get some insight into the type of test we'll need to take.

EXAMINATIONS.

Code test (five letters
to the word).

125. The test shall consist of messages with call letters and regular preambles, conventional signals and abbreviations and odd phrases, and shall in no case consist of simple, connected reading matter. The test will be conducted by means of the omnigraph or other automatic instrument wherever
possible.

126. The test shall continue for five minutes at a speed of 20 words, 12 words, and 5 words per minute, respectively, for the commercial first, second, and lower grades, and to qualify the applicant must receive 20, 12, or 5 words in consecutive order.

Note: Applicants for amateur grades will need take the 5 words per minute examination only.
.
Written examination.

129. The practical and theoretical examination shall consist of seven comprehensive questions under the following headings and values:

Points,
maxi-
mum value.
(a) Experience 20

(b) Diagram of receiving and transmitting
apparatus 10

(c) Knowledge of transmitting apparatus 20

(d) Knowledge of receiving apparatus 20

(e) Knowledge of operation and care of storage
batteries 10

(f) Knowledge of motors and generators 10

(g) Knowledge of international regulations governing radio communication and the United States radio laws and regulations 10

100

PLACES WHERE EXAMINATIONS ARE HELD.

Regular examinations

134. United States navy yards: Boston, Mass.; New York; Philadelphia,
Pa.; Norfolk, Va.; Charleston, S. C.; New Orleans, La.;

Mare
Island, Cal; Puget Sound, Wash.

135. Naval radio stations: San Juan, P. R.; Colon, R. P.;
Honolulu,
H. T.; Key West, Fla.

136. United States Army stations: Fort Omaha, Nebr.; Fort Wood,
N. Y.; Fortress Monroe, Va.; Fort St. Michael, Alaska; Fort

Valdez, Alaska.

137. Bureau of Navigation, Department of Commerce, Washington,
D. C.

138. Radio inspectors, at their offices and elsewhere, by
special
arrangement.

Shortly later, HPM organized the ARRL, and the rest is history!

Today:

Six different license classes.
Five different written exams.
Three different Morse exams, with three different possible formats.

They'll fight each other. About the only practical way to do this is to diode steer them. Use a pair of matched diodes to OR the positive sides of the supplies together, just tie the negatives together directly. You'll lose about 0.6 volt this way, but the two supplies won't fight each other. One may still current hog over the other, however. You have to watch out for that. You may need to add equalizing resistors to the diode OR junction to prevent that. That'll also cost you a bit of voltage, and reduce the quality of the regulation. There's no free lunch.

You are correct in regard to HRO which has an EMS-11 for around $50.
However, I've seen several compatible new mikes at swap meets for
around $30.

What you need to do is forget the letters that are stopping you. Then come
back to them at a later date. As you drive down the road form the letters
in your head, don't use dot dash, use di dah. Sound them out and even
make the noise, if the folk's with you dont mind.
Read road sign's, license plates, whatever.

Do you have a HF receiver? If so, then tune in W1AW code practice. If
you take QST, the sked is in there, if you can't find a local with the
info then let me know and I'll look it up for you.

really want it, you will learn it. It is actually fun after a while.
I am from the old school on CW and feel you need to get on the air and
use it. Get your CW up to 5 and get on ten CW with some local's. Use it
you will be surprised how fast you will pick it up. With tapes you will
tend to start to memorize the text, this is why if you get on the air you
will find it a bitch at the start, but easier as you go.

I learned CW the wrong and hard way. Got on the air as a Novice. Then
had to "relearn" it. I got my general 3 months after my novice. I now
copy 40-50 solid. If I can do it, anyone can.

Please do not frame it as I am not mass crossposting.

==========

*** BLOW OUT SALE *** All prices are negotiable !!!!!

@@@ RS Extended warranty costs $10 or more but this price is not
included in the price mentioned and I did not consider extended
warranty for deciding the price. I put the price for the rig itself
when you buy directly from the RS or other stores @@@

Everything is working perfect and will be checking once more before
the shipment. You may refuse the shipment if you have any doubts
that there are malfunctioning problems. We can discuss all of this
matter through the e-mail: webmaster@radiotelephone.net.NOSPAM
Please do not forget to remove .NOSPAM when replying !!

=-=-=-=-=-=-=- Listing for Amateur + CB + Scanner =-=-=-=-=-=-=-

Amateur Mobile:

HTX-242 Mobile Radio
- 136-174 MHz VHF 45W 2m receiver. Extend TX by
buttons.
- Purchased: March 1997
- Warranty: ~1.5 years RS extended warranty
- Asking: $160 CDN or $100 US + shipping(radio shack
price $399.99 CDN + tax). It's about 65-70% off the regular
purchase price (if you include the tax as well)
- Box + Manual + Proof of Purchase
- Note: This radio is cigarette lighter plug ready.
You do not need to attach a cigarette lighter plug. It's already
there. Working perfect. Low usage to now.

Power Supply (Techcessories)
- 6A max Power Supply. Works perfect for HTX-242
mobile. Want to use for HTX-202 ? I will give you a plug free !!*
- Purchased: March 1997
- Warranty:~1.5 years RS extended warranty
- Asking: $40 CDN (radio shack price 99.99 CDN + tax)
or $25 US + shipping
- One output and one cigarette lighter plug output
- Box + Manual + Proof of Purchase

RS Mobile Antenna
- Purchased: a year ago. i have two.
- Warranty: no
- Asking: $5 CDN (Original Price well exceeded $60
CDN)

All* of this [amateur gears] for... $200 CDN or $130 US FUNDS
I prefer sell all of these at once. Need an extra mobile
rig or start ham radio and looking for one ? This is a good
opportunity for you to add an extra rig !! 1st come (payment), 1st
serve.

==========
Amateur Portable:

HTX-202 SOLD at $99 CDN. No Longer Available !!
Thank you for your correspondance.

CBs:
TRC-484
- 40CH AM Mobile.
- Purchased: April 1997
- Warranty:~1.5 years RS extended warranty
- Asking: $60 CDN or $40 US (radio shack price $139.99
CDN + tax)
- Cigarette plug alREADY !!!!!
- Portable CB ANTENNA comes with this !!!!!
- Power can be modified up to ~8-15W (it is illegal.
do this at your own risk)
- Box + Manual + Proof of Purchase

TRC-485 looking for SSB CB for low cost ?
- 40CH AM, 80CH SSB
- Purchased: December 1997
- Warranty: 6 months RS warranty
- Asking: $130 CDN or $90 US (radio shack price
$299.99 CDN + tax)
- Cigarette plug alREADY !!!!!
- Mobile cellular look like ANTENNA comes with this
!!!!!
- Power can be modified up to ~8-15W (it is illegal.
do this at your own risk)
- Box + Manual + Proof of Purchase

I will try to attach antenna for all the CB rigs free.

Scanners:

Pro-28 Portable Scanner
- General VHF and UHF scanner
- Purchased: August 1997
- Asking: $59 CDN or $39 US (radio shack price $129.99
CDN + tax)
- Rechargeble Alkaline Batteries or Ni-Cads included.

- Box + Manual + Proof of Purchase

Accesories:

Micronta SWR/POWER Tester
- SWR/POWER Tester for HF
- Purchased in 1997
- $25 CDN or $15 US (radioshack price $44.99 CDN +
tax)
- ~2.5 years instant exchange extended warranty (i.e.
you buy this and if there is a problem, you can exchange it anyway...
although working perfect at this time)
- Manual + Proof of Purchase

=-

1st come, 1st serve.

Why selling: I am trying to clear up my stations... I am very busy
nowadays and do not have time for ham or CB...

ALL PRICES ARE NEGOTIABLE !!!!!!

Enjoy !!

>pregnant. Is there any precautions?
>
>My friends told me that the Family Radio Band are weak and I should just get
>a amateur radio instead.
>
>spdrace7@ix.netcom.com
>

Three precautions.

1) It is illegal to transmit on the amateur radio frequencies without
a proper license. To get a license you need to pass an exam. That
requires a little studying, but it shouldn't be too difficult for
anyone. There are study guides available from several sources,
including Radio Shack and The ARRL (American Radio Relay League - the
US National orginazation for amateur radio). Check out www.arrl.org.

2) There is some concern about the effect of exposure to radio
frequency from a transmitter. In fact, as part of the exam required to
get an amateur license, there are questions relating to determining
safe RF exposure levels.

3) Information that you transmit over the amateur frequencies is
likely to be heard by many people - there is no privacy.

By itself, an amateur handheld isn't likely to have much better range
than an FRS radio.

From Tad Cook, K7VVV
Seattle, WA September 11, 1998
To all radio amateurs

SB PROP ARL ARLP037
ARLP037 Propagation de K7VVV

Solar activity still remains fairly high. The average solar flux for the past week declined a little over 8 points, but the daily value actually peaked again on Sunday at 164.6. The average solar flux for the previous 90 days went up another two points to 124, and the solar flux on every day last week was above this level, indicating a continued general upward trend. Geomagnetic conditions were stable, so HF operators enjoyed good propagation.

Solar flux is expected to decline on Friday through Sunday from 140 to 135 to 130. It should then bottom out below 130 early in the week, then rise above 145 after September 18, above 155 after September 23, and peak below 170 from September 25 until the end of the month. Look for unsettled geomagnetic conditions around September 18 and 19, caused by a solar wind stream from a coronal hole. These predictions are based on the previously observable regions now rotated off the visible surface of the sun, so a burst of new activity could raise these values.

VE2FLE sends along an interesting resource for current geomagnetic conditions. It is an ftp site, which can be accessed using a web browser, and the downloaded file can be read with the same. Check ftp://suntwo.geolab.NRCan.gc.ca/pub/forecast/forecast.gif to see current geomagnetic activity in the sub-auroral, auroral and polar zones. In addition to current and recent activity, it also provides forecasts.

Sunspot Numbers for September 3 through 9 were 117, 73, 101, 142, 138, 164 and 156 with a mean of 127.3. 10.7 cm flux was 162.7, 154.7, 154.3, 164.6, 151.2, 153.5 and 145.3, with a mean of 155.2, and estimated planetary A indices were 9, 7, 6, 6, 7, 11, and 8, with a mean of 7.7.

To all radio amateurs

SB QST ARL ARLB071
ARLB071 South Texas hams brace for Tropical Storm Frances

Hams in South Texas have activated HF emergency nets on 40 and 75 meters as Tropical Storm Frances hit the Texas coast from the Gulf of Mexico early Friday. The storm, which is not expected to become a hurricane, is packing 65 mph winds. Torrential rain and high tides caused flooding in coastal areas and damaged beachfront homes. Residents of some coastal areas had to evacuate.

ARES has activated 7.285 and 3.873 MHz for daytime and nighttime emergency traffic, respectively, and 7.290 and 3.935 MHz for daytime and nighttime health-and-welfare traffic, respectively.

South Texas Section Manager Ray Taylor, N5NAV, has asked the FCC to declare a communications emergency to keep the net frequencies clear for the next few days.

Taylor reports one person has died as a result of the storm.

Have you ever listened to an Anglophobic Scot speaking "English?"
I have known some who delight in being incomprehensible.
I tell them come back after you learn English, but of course they don't.

Basque "spanish" is the same. Many want to be independent of Spain
and there is cause in their history.. Like the persecuted Jews, the Basque
do not forget easily or willingly. They take pride in being cryptic to the
foreigner including any person from as far as 2 towns away, in some cases.

HAMS ACTIVATE NETS AS TROPICAL STORM FRANCES STRIKES

Hams in South Texas have activated HF emergency nets on 40 and 75 meters
as Tropical Storm Frances hit the Texas coast from the Gulf of Mexico
early Friday. The storm, which is not expected to become a hurricane, is
packing 65 mph winds. Torrential rain and high tides caused flooding in
coastal areas and damaged beachfront homes. Residents of some coastal
areas had to evacuate.
```

ARES has activated 7.285 and 3.873 MHz for daytime and nighttime emergency traffic, respectively, and 7.290 and 3.935 MHz for daytime and nighttime health-and-welfare traffic, respectively. South Texas Section Manager Ray Taylor, N5NAV, has asked the FCC to declare a communications emergency to keep the net frequencies clear for the next few days.

Taylor reports one person has died as a result of the storm.

CANADIAN AMATEURS REPOND TO SWISSAIR DISASTER

Within a couple of hours of the Swissair Flight 111 crash September 2, Amateur Radio operators had set up a communication link between the disaster site at Peggy's Cove and downtown Halifax. At the request of local government officials, RAC ARES Halifax Area Coordinator Dave George, VE1AJP, relayed word to activate the Halifax Regional Municipality Emergency Measures Organization Amateur Radio Group. In addition, the Director of the Nova Scotia Region Canadian Red Cross, John Byrne, activated the Disaster Response Team, including Telecoms Officer Joe MacPherson, VE1CH. The Red Cross team was directed to report to the site and join the emergency response vehicle, on its maiden journey. MacPherson said new UHF hand-helds were used in simplex to keep in touch with key Red Cross officials and to link with the command bus--as a backup to Amateur Radio. Hams also were deployed to several other staging areas. MacPherson said the hams' emergency ID cards and vehicle identification cards were imperative to gain access.

MacPherson called in members of the Senior Amateur Radio Association to activate the communications center at the Canadian Red Cross Headquarters in downtown Halifax and also set up telecommunications links--amateur and other--between the on-site emergency response vehicle, the command post, Red Cross HQ, and the net control station.

MacPherson said some 20 hams volunteered in all. A shift roster was set up for 24-hour operation by the net control station. Two repeaters were used, one for traffic handling, the other for personnel coordination and assignment.

Amateur operators established emergency HF links to the military and to naval ships engaged in the search. They also were asked to establish communication on marine emergency channel 16 (156.8 MHz).

"The response was both fast and efficient considering the hour and the number of people needed," MacPherson said. "The extensive training over the past year really paid off. Radio procedures were excellent, and I heard many reports from senior officials at the site about how well the amateurs performed."--thanks to RAC and Joe MacPherson, VE1CH

LABOR DAY NO PICNIC IN WESTERN NEW YORK

There was no Labor Day holiday for hams in upstate New York, who activated SKYWARN nets in the face of severe weather that struck several counties. In the wee hours of September 7, straight-line winds ranging from 70 to 115 MPH tore across 11 of the 30 counties that make up the Western New York section--from Niagara County in the west to Herkimer,

Otsego and Delaware Counties in the east. Some 270,000 customers still were without power by mid-week. Gov. George Pataki declared nine counties as disaster areas. Four deaths and nearly two dozen injuries are blamed on the storms. Oneida County SEC Bud Hippisley, K2KIR, reported a lightning strike the day after Labor Day at his home damaged several pieces of ham radio and computer gear.

Shortly after midnight on Labor Day, the National Weather Service began issuing severe thunderstorm and tornado warnings. One of the more severely damaged areas was the New York State Fair Grounds, where the annual fair was scheduled to wind up on Labor Day. The storm hit there at 1:20 AM, killing two State Fair vendors and injuring several campers. The State Fair was closed on Monday.

Western New York SM Bill Thompson, W2MTA, reports that initial severe weather alerts by the Binghamton NWS center came at 12:52 AM. SKYWARN activations followed in Cayuga, Onondaga, Seneca and Yates counties. Tornado warnings were posted from Onondaga County eastward to Madison and Oneida counties at 1:05 AM. Additional SKYWARN nets activated at 1:30 AM with WB2UEC as SKYWARN net control on the Oneida County 2-meter repeater.

Red Cross shelters remained open at mid-week in four counties. Damage assessment and debris removal was expected to continue for several more days. Army and Air National Guard personnel have been activated to help.--thanks to Bill Thompson, W2MTA

CONTEST PANEL PONDERS AGENDA

ARRL Contest Advisory Committee Chairman Tim Duffy, K3LR, reports the CAC is looking at four possible contesting rules changes. The committee plans to vote on the topics in October and make its recommendations to the Membership Services Committee, and is seeking input on the issues from the contesting community.

Among the items the CAC is a pondering is whether to suggest increasing the time period (at the end) for the 10 GHz and Up Cumulative Contest.

The CAC also is considering whether to suggest that ARRL contests with single band categories allow multiple single-operator (ie, multiple operators) unassisted single band operations from the same location and using the same call sign. The individual operators would submit separate log entries.

The CAC is also considering some questions regarding CW contacts for mixed-mode entries in the ARRL 10 Meter Contest: Should contacts be required to be made below a specific frequency and/or should operators be required to stay on a mode for a specified time before switching to the other mode?

The CAC also wants to know if it should recommend establishing a low-power category (200 W output) for VHF and UHF operating events.

Comments on the proposals are welcome to the Contest Advisory Committee; e-mail cac@arrl.org.

SOME SWEEPSTAKES SECTIONS PLAY HARD TO GET

All contesters know the toughest ARRL/RAC sections to snag during the ARRL November Sweepstakes--or at least they think they do. But accountant Doug Richardson, VE5CMA, "could not resist playing with the numbers" and has ranked the hard-to-get sections in both the CW and phone events--from 1 to 78.

Most people who've ever attempted a clean sweep during Sweepstakes would probably guess Yukon/Northwest Territories (VE8/VY1) as the most elusive section. The real surprise from Richardson's data is that VE8/VY1 came in third place--behind Wyoming and Newfoundland-Maritime--on CW and second behind Puerto Rico on SSB. His analysis and rankings are detailed in the article ARRL Sweepstakes "Need List" on page 20 of the September/October issue of National Contest Journal (NCJ).

Working from 1996 and 1997 Sweepstakes results, Richardson teased out a combined ranking for all 78 ARRL/RAC sections. The results will be of interest to anyone who's ever tried to put those final few mults into the log in a quest to work all 78.

On CW, the top five hardest sections were: Wyoming, Newfoundland-Maritime (split in 1997), Yukon/NWT, Quebec, and Saskatchewan. On SSB, the toughest five sections to get were Puerto Rico, Yukon/NWT, Alaska, Newfoundland-Maritime, and Quebec.

What was the easiest section to snag? On CW, it was South Texas. On phone, it was Michigan, according to Richardson's statistics.

See you in the Sweeps!

PROPOSED POSTAGE HIKES FORCE QSL SERVICE TO ADJUST

Starting in 1999, the ARRL Outgoing QSL Service will increase its fees from $4 to $6 a pound. ARRL Membership Services Manager Bill Kennamer, K5FUV, says the move is necessary to absorb the effects of a proposed postal rate increase and to bring the money-losing service a bit closer to a break-even basis. The rate for quantities of 10 cards will remain at $1.

Kennamer said the rate increase represents a cost of 4 cents per card (based on 150 cards per pound) to sort, package and mail QSL cards to the bureaus of the other IARU member societies. "Even with the increase, this still represents one of the better bargains in services to ARRL members," he said.

Inaugurated in 1976, the Outgoing QSL Service provides an economical way for ARRL members to send their QSL cards to amateurs in other countries. Today, two fulltime employees handle the more than 2 million cards that show up most years.

"The ARRL has subsidized the Outgoing QSL Service since the beginning, and continues to do so today," Kennamer explained. He said the League's handling and mailing costs now run more than $9 a pound, leaving a shortfall of more than $5 per pound at the current rates.

The last rate increase, to $4 a pound, was three years ago.

JY1 ACTIVE FROM US

During his stay in the US for medical treatment, King Hussein of Jordan, JY1, has been active on HF, and AMSAT Area Coordinator Bruce Paige, KK5DO, in Houston, is among those with a QSL to prove it. And what a QSL it is!

Hussein, who suffers from lymphoma, has been in the US for treatment of the disease earlier this summer at the Mayo Clinic in Minnesota. While still in the US, he also made time to get on the radio. Paige worked JY1 on August 22 around 2200 UTC on 20-meter SSB "for about 10 minutes until the pileup got to be too much."

Paige said Hussein had been working a US op who had just undergone the same cancer treatment that the King was starting, but then signed off. He showed up on frequency later when his QSL manager, WA3HUP, came on the air, and Paige eventually got to work him. "I have worked astronauts aboard the shuttle, cosmonauts aboard the Mir, DX stations on rare islands," Paige said. "None of then gave me the rush that talking to the King has done. That was a very exciting moment for me."

Hussein also was on the air Sunday, August 30. Paige said he got his QSL about a week later via WA3HUP. It's very likely the only QSL card decorated with gold leaf. You can see it at http://www.amsatnet.com/jy1.html.

King Hussein was due to return to the Mayo Clinic earlier this month.

NEW VIDEOS AVAILABLE FROM ARRL

The League now has another volume of videos available for your club program. Check out Volume 12--Amateur Radio Far Away. It includes programs that focus on Amateur Radio in space.

* Phase 3D Integration Lab. Take a close-up view of the satellite of the future, Phase 3D, described by the very folks who designed and assembled it. Scientists and engineers at the Phase 3D Integration Lab near Orlando, Florida, show all the ins and outs of testing the satellite in preparation for its launch. [1996; 25 mins]

* JAS1B/Fuji2. Our fellow amateurs in Japan have been experimenting with Amateur Radio satellites for a long time. Here's a look at some of the history and background of Japan's Amateur Radio satellite program. [1996; 28 mins]

* Sandia Robotics. Have you ever considered how robots may affect Amateur Radio in the future? Sandia National Laboratories demonstrates several robots, but none have any Amateur Radio applications--yet! This

video is sure to prompt a discussion about the ways Amateur Radio could enhance robot use. [1996; 12 mins]

* SAREX at Center Street School in California. With the help of the ARRL, AMSAT, and NASA, Gordon West, WB6NOA, describes a successful Space Amateur Radio EXperiment (SAREX) contact with shuttle mission STS-94 in July, 1997. [1997; 47 mins]

Volume 12--Amateur Radio Far Away, is $12 from the ARRL. To order, contact Margie Bourgoin, KC1DCO, in the ARRL Educational Activities Department; tel 860-594-0267; e-mail mbourgoin@arrl.org. Order item No 6974.

FCC SEQUENTIAL CALL SIGN UPDATE (View with nonproportional font!)

The following is a list of FCC sequentially assigned call signs issued as of September 1, 1998. For more information about the sequential call sign system, see Fact Sheet PR5000 #206S or contact the FCC, 1270 Fairfield Rd, Gettysburg, PA 17325-7245; e-mail fccitd@fcc.gov.

SOLAR UPDATE

Sun watcher Tad Cook, K7VVV, Seattle, Washington, reports: Solar activity still remains fairly high. The average solar flux for the past week declined a little over 8 points, but the daily value actually peaked again on Sunday at 164.6. The average solar flux for the previous 90 days went up another two points to 124, and the solar flux on every day last week was above this level, indicating a continued general upward trend. Geomagnetic conditions were stable, so HF operators enjoyed good propagation.

Solar flux is expected to decline September 11-13 from 140 to 135 to 130. It should then bottom out below 130 early in the week, then rise above 145 after September 18, above 155 after September 23, and peak below 170 from September 25 until the end of the month. Look for unsettled geomagnetic conditions around September 18 and 19, caused by a solar wind stream from a coronal hole. These predictions are based on the previously observable regions now rotated off the visible surface of the sun, so a burst of new activity could raise these values.

VE2FLE sends along an interesting resource for current geomagnetic conditions. It is an ftp site, which can be accessed using a Web browser, and the downloaded file can be read with the same. Check ftp://suntwo.geolab.NRCan.gc.ca/pub/forecast/forecast.gif to see current geomagnetic activity in the sub-auroral, auroral, and polar zones. In addition to current and recent activity, it also provides forecasts.

Sunspot numbers for September 3 through 9 were 117, 73, 101, 142, 138, 164, and 156, with a mean of 127.3. The 10.7-cm flux was 162.7, 154.7, 154.3, 164.6, 151.2, 153.5, and 145.3, with a mean of 155.2. The estimated planetary A indices were 9, 7, 6, 6, 7, 11, and 8, with a mean of 7.7.

IN BRIEF:

* This weekend on the radio: The ARRL September VHF QSO Party is September 12-13. See August QST, page 103, for the rules. Also on tap this weekend: the Worked All Europe (SSB) Contest, the North American Sprint (SSB), and the Ohio and Indiana QSO parties. Just ahead: YLRL Howdy Days are September 18-20; the QCWA QSO Party--Part 2 (see below), the ARRL 10 GHz and Up Cumulative Contest, the Air Force Anniversary QSO Party, the Washington State Salmon Run, and the Tennessee QSO Party are September 19-20. See September QST, page 103, for more information. Contest results: The 1998 ARRL DX Contest CW results are available to ARRL members on the ARRLWeb Members Only Web Site, http://www.arrl.org/members/. This posting in Adobe PDF format replicates the article that will appear in October's QST.

* QCWA QSO Party--Part Deux: The second Quarter Century Wireless Association QSO Party of the year takes place from 1800 UTC September 19 to 1800 UTC September 20. This is a CW and phone event--operator's choice or mixed mode. Work stations on each of 15 possible "bands," 160-10 (excluding WARC), CW and phone, plus VHF and UHF. Work stations in your own QCWA chapter once. No crossband or repeater contacts. QCWA members exchange call signs, last two digits of the year first licensed, chapter number ("AL" if not a member of a chapter). Nonmembers exchange call signs, the last two digits of the year first licensed, and state/province/country. Logs go to Art Monsees, W4BK, 420 Bay Ave, Apt 1521, Clearwater, FL 34616, or Don Bice, W4PCO, 5511 18th Ave N, St Petersburg, FL 33170. For full details, check out the QCWA Web site at http://www.teleport.com/~qcwa/qsoparty.htm or see QST, March 1998, page 101.

* Zack Lau, W1VT, in hospital: ARRL Senior Lab Engineer Zack Lau, W1VT, is reported to be in good spirits and on the road to recovery after being hospitalized in Hartford, Connecticut. A well-known and widely respected authority on RF and microwave topics and a regular contributor to QEX, Zack is a fixture on the VHF/UHF and above contest circuit. He's also been known to fire up W1AW on occasion to operate an HF event. Zack has been at ARRL HQ for more than 12 years and is considered the technical cornerstone of the ARRL Lab. Friends may send their best wishes to Zack Lau via ARRL HQ.

* Martha McCoy succumbs following surgery: Martha McCoy, the wife for over 50 years of former ARRL HQ staffer and ham radio writer and columnist Lew McCoy, W1ICP, died September 4, following a brain tumor operation.

* K0BC is new QCWA president: Gary Harrison, K0BC, of Bolivar, Missouri, is the new president of the Quarter Century Wireless Association. He succeeded Jack Kelleher, W4ZC, on September 1. QCWA members can contact Harrison at gharrison@getonthe.net.--thanks to Jack Kelleher, W4ZC

* Vanity update: The vanity call sign program continues to be a hit. The FCC in Gettysburg reports it received 597 vanity applications during August, nearly all of them filed electronically. The FCC reports it has processed vanity applications received through August 24.

* VE3PD to be next RAC president: The Radio Amateurs of Canada Board of Directors has elected Pat Doherty, VE3PD, of Murillo, Ontario, to succeed Farrell "Hoppy" Hopwood, VE7RD. Doherty, who's Ontario North Director for Radio Amateurs of Canada, will take office January 1, 1999. Hopwood resigned earlier this year, effective at year's end.--RAC

* K7BV assumes CY9AA QSL chores: National Contest Journal Editor Dennis Motschenbacher, K7BV, has assumed QSL chores for the 1997 CY9AA DXpedition to St Paul's Island. The DXpedition made some 12,000 contacts, but QSLing has fallen behind for a variety of reasons. Motschenbacher says he'll enlist the assistance of his wife and his friends in the Northern California Contest Club "in an organized yet speedy attack on the QSL backlog." During the transition in QSL managers, K7BV requests that stations be patient and not send additional cards either to VE9AA or to him. Motschenbacher said he now has the cards originally sent to VE9AA and expects the logs soon, but added that it will take some time to clear the entire backlog of "thousands" of cards. "I will be putting this activity right at the top of my list," he pledged. VE9AA, VE1PZ, and K7BV were the ops for the June/July 1997 CY9AA operation. K7BV says that the first cards from his CY9AA "clean-up" effort go out the week of September 7, "with KU7Y joining the team of volunteers dedicated to helping me get these much overdue cards out as soon as possible." He adds that his own QSLs for his recent 8P0V IARU contest operation and warm-up time as 8P9JJ "are being prepared now to respond to the 6,000+ QSOs I made."--thanks to Bill Moore, NC1L

* Updated 10 meter logs delayed: The ARRL Contest Branch had hoped to publish the revised 1997 ARRL 10-Meter Contest Results in the October

QST. Due to a software glitch in the Contest Branch, however, the revised results will not appear in that issue but in a later issue, possibly November. A problem had developed with the system that collects electronic log submittals, and some logs were not received even though they had been acknowledged.

* Marquesas/Austral Islands on DXCC List: The ARRL Awards Committee has accepted a recommendation of the ARRL DX Advisory Committee to add the Marquesas Islands and the Austral Islands (FO) to the DXCC List. The additions will be effective with contacts made on or after 2359 UTC, March 31, 1998. The ARRL DXCC Desk will accept QSL cards for both the Marquesas and the Austral Islands beginning October 1, 1998. QSL cards received before that time will be returned without action.--DXCC Desk

* TAPR 1998 CD-ROM available: The TAPR 1998 CD-ROM that was supposed to be ready for the Dayton Hamvention now is available! Those who ordered the 1998 CD should have already received their copies. The CD features updated information and software. Check the TAPR Web site, http://www.tapr.org/tapr/html/cdrom97.html, for the list of current updates. The price is $20 (plus $5 S&H). The new virtual audio segments on the 1998 CD include the 1997 ARRL and TAPR Digital Communications Conference; the 1997 Digital Communications Conference (more than 30 hours of audio, plus photos); the 1997 Ham Radio Town Meeting at Dayton; and the 1997 Texas Packet Radio Society Fall Digital Symposium. TAPR still has copies of the 1997 CD-ROM too. Send orders to TAPR, 8987-309 E Tanque Verde Rd #337, Tucson, AZ 85749-9399; tel 940-383-0000; fax 940-566-2544.

* Satellite Times ends publication: Satellite Times has ceased publication after four years. The magazine, published by Grove Enterprises, called it a wrap with its September issue. Subscribers will be absorbed by Grove's Monitoring Times. In a statement, publisher Bob Grove said his company attempted to turn the publication over to "other responsible entities," but got no takers. He said rising costs for paper and printing were the last straw. For more information, see http://www.grove-ent.com/grove/hmpgst.html

* WTX SM on the tube: West Texas Section Manager Charles Royall, WD5CJI, made six TV appearances on KLST-TV, Channel 8, on August 26. One was a "live shot," and the others were a rerun of a news clip taped in his shack as he handled traffic during the Del Rio flood disaster. Royall also coordinated flood relief efforts for the Lions Clubs and Salvation Army of San Angelo, Texas.--thanks to Jennifer Gagne, N1TDY

* USAF special event: The Strategic Air Command Memorial Amateur Radio Club will sponsor a special event station during the USAF QSO party September 19-20. K0GRL will operate from Elkhorn, Nebraska. Most operation will be on HF (no fixed frequencies), with some VHF/UHF operation. K0GRL is the call sign of the late Gen Curtis LeMay. For more information, contact SSgt Clay Mayrose, WA6LBU, Shift Supervisor, Offutt Global Detachment 1, 755TH Communications Squadron; e-mail clay.mayrose@offutt.af.mil or wa6lbu@aol.com; tel 402-292-9680 (H);

402-294-7062 (W).

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide essential news of interest to active amateurs promptly and efficiently, and in advance of publication in our official journal, QST. The ARRL Letter strives to be fast, accurate, concise, and readable.

Material from The ARRL Letter may be reproduced in whole or in part in any form, including photoreproduction and electronic databases. Credit must be given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, ARRL members should visit the League's Members Only Web Site at http://www.arrl.org/members/ and follow the registration instructions. Registration also provides access to The ARRLWeb Extra, a news and feature magazine.

For members and nonmembers alike, The ARRL Letter also is available free of charge from these sources:

* The ARRLWeb page, http://www.arrl.org/arrlletter/. NOTE: The ARRL Letter will be posted each Friday as soon as possible after publication.

* The Netcom listserver operated by volunteers from the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list". (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via the Netcom listserver.)

* The HIRAM BBS: 860-594-0306. The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published Fridays). For example, to request The ARRL Letter file for Friday, September 4, 1998, type "send ltr0904.txt". Then, on a separate line, type "quit". The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.

* CompuServe and America Online subscribers, as a downloadable text file
in the services' ham radio libraries.

Ham radio is so unimportant there is nothing about it that could get me "mad."

Burt

3856. Apple Ham Log to PC

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-11 00:00:00 UTC
From: majicpat@aol.com
Message-ID: <1998091122320000.SAA07258@ladder03.news.aol.com>
Source record: 162061

Greetings:
For several years, I used Appleworks (on my Apple IIGS computer) to maintain a database containing all my ham radio contact loggings. I would like to convert this data for use in an IBM-compatible environment. Thus far, I have used a PC Transfer card (Applied Engineering) to convert the Appleworks files to MS-DOS text files. Does anyone know how I can convert these text files so they can be read by an IBM-compatible database?

Many thanks,
Pat

3857. Re: How to transmit on police frequencies?

Newsgroup: rec.radio.amateur.misc

If you where able get a radio to transmitt on the Police frequency you still would have to get the right CTCSS or DPL for that department, and if the department has repeaters then you need both frequencys to be able to talk and listen to then. Tranmiting on the police frequency is a VERY BIG DEAL so if you do and your not autherized to do so like EMERGENCY SERVICES PERSONAL, then be prepared to defend yourself. Also the haveing a radio that is illegaly modified to transmitt out of HAM band is ILLEGAL to have unless your part of MARS and CAP.

If you where able get a radio to transmitt on the Police frequency you still would have to get the right CTCSS or DPL for that department, and if the department has repeaters then you need both frequencys to be able to talk and listen to then. Tranmiting on the police frequency is a VERY BIG DEAL so if you do and your not autherized to do so like EMERGENCY SERVICES PERSONAL, then be prepared to defend yourself. Also the use of a radio that is illegaly modified to transmitt out of HAM band is ILLEGAL to have unless your part of MARS and CAP. OR Emergency personal

Amen. Almost fifty years ago I went from something like zero wpm to my 5wpm Novice via the ARRL practice sessions as a teenager, then to my 20wpm test some years later via those same sessions and nothing more beyond on the air experience. Never had a code practice tape in my life. I've been away from ham radio for two decades and now as a geriatric I'm right back at w1aw to knock off the rust. There is absolutely nothing to compare with real on-the-air w1aw code practice sessions. You mark your calendar with the schedules for the particular sessions you need and it's upon you to control your life and be tuned on the freq on time. You can't beat it.

3870. The Barbie Ham

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-11 00:00:00 UTC
From: burt@imfamous.com
Message-ID: <6t9phc$ik8$1@nnrp1.dejanews.com>
Source record: 162111

I received the following message which says it all. By the way I coined the term "Barbie ham" to describe those hams that the old farts license when they go into the schools and run ham classes in which rarely even one kid EVER gets on the air or own equipment. The Barbie Hams are all for show.

From: ERIK BAGBY
To: BURT FISHER
Subj: INTERESTING HAMS-WHERE?

I wish you guys could come to Atlanta!! I am a 17 year old ham and have been licensed since 1985- and let me tell you how much I cannot agree more with you guys!! I have demonstrated amateur radio for SEVERAL of my classes- never seen so many confused and bored people. I mean, let's get real here- why would the average young person want to get into a hobby full of social oucasts when they can get into computers, drugs, booze,you name it!! I got into ham because I've got radio in my blood- but not everyone is like me!! And hey, we've got so many of those "barbie dolls" down here- just listening to all those old fart gutter scum talk about how their daughter passed her Tech is hilarious. I never hear them on the air! No wonder I put up a GMRS repeater- people can actually understand the concept of that!!
73's from the armpit of the south,
Erik M. Bagby/KB4TPP

Interesting question that you asked. Let's start with this premise: That you and your wife are not licensed Amateurs, and that you are asking a serious question and not simply trying to start a controversial thread. (Unfortunately, that happens in this NG occasionally).

Anyway, taking your situation at face value, congratulations on the coming arrival to your family!

You cannot legally use Amateur transmitting equipment without a license, so let's look at alternatives.

How far do you need to talk, distance-wise? You might be able to get away with FRS. It has a reliable range of 3/4 mile under normal circumstances, such as in a mall, around your neighborhood, and car-to-car. It can be two miles (or more) under "ideal" circumstances. That means you are in the clear, or talking over water, or on the top floor of a high-rise hotel talking down to the beach. The equipment is quite inexpensive.

The next level is GMRS. It is legal for personal use. The cost of equipment is higher, and you have to spring for an FCC license (The fee used to be around $70). GMRS has higher power and allows the use of external antennas, so it gets 3 to 5 miles range. You also might be able to subscribe to a repeater system, which could give you 15 to 40 miles, or more.

The next alternative, if you need longer range, is Cellular. Or the newest angle (available in large metropolitan areas) which is Nextel. It works like a long-range walkie-talkie and also can make cell calls. Yes, air time charges are applicable.

My wife and I have found Cellular to be the most practical. We use FRS in the mall or at sporting events. However, each of us has a portable cell phone which we can use in and out of the car. These are little hand-held units that cost one buck each when you sign up for a year's service.

I pay $49/mo for my service, which gives me 300 minutes of airtime free. Adding her phone to my account was another $15, and she gets about one hour free time.

I look at it this way. There is nothing I can do to her automobile for $15/month to guarantee it won't break down or be involved in an accident. This is cheap insurance, as I see it.

Avoid the temptation to use Amateur gear. Also avoid marine radios, if you're not on a boat. If you have other questions about FRS, GMRS, or Cellular, please write. Someone in the newsgroup will know the answer, or will know where to find it.....

Best regards,
Paul (Amateur call K5PF)

Aw come on fellows! There is absolutely no need for a confusing, complex
program to find the position of any satellite in synchronous orbit!
There is a simple, single page nomograph in which the satellites
suborbital point is entered and the azimuth and elevation is obtained.

If there could ever be a better example of why it takes a computer
to really screw up something simple, this is it!! Cliff K7RR

This didn't fly when you posted this message (word-for-word) last Fall. So let's run it around one more time and see if you get some suckers to bite.

Now, the last time you posted this, everyone poked holes in the Erik Bagby story. The main objection was how a 17-year-old put up a GMRS repeater. Anyone who has worked with repeaters in ANY radio service knows that this would be quite an undertaking for a youngster of his age. How many hours would he have to bag groceries just to pay for the GMRS transcievers, let along a REPEATER?

Also, the last time you posted this word-for-word epistle, nobody commented on how clever you were for coining the term "Barbie Ham". Actually, it went the other way. You may have coined the term, but it never got into "circulation". And that made you mad. Do we have to go through that again? Perhaps you think there are some newcomers to the NG who didn't see it the first time and will embrace the term (and you) and give you some satisfaction. (Sigh)

Can I respectfully make a suggestion, Burt? Let's pretend your posting didn't make a second appearance. Then let's bring back the boy who is collecting get-well cards. Or the "chain letter" which is going to make us a lot of money. How about circulating the new one? You know....where if you keep sending it to people, you will win $5,000 and/or a trip to Disneyland. Yeah, I know the media has checked it out and reported in national magazines that it is a hoax. But it's so BELIEVABLE! And it beats the story about the Tech Plus in Smyrna GA.

I think Richie Allen is correct in that digital(CW) is the most
efficient means of communication. History tells us so. For instance, the
Indians used smoke signals and drums to communicate over long distances.
The military until recently relied on CW as a means of communicating
during war time. Even though the military is not using CW now, they are
using another form of digital communication. Imagine this: several
trained soldiers positioned around the world with very simple equipment
relaying messages around the world using only CW. CW is simple, with few
choice components and a sheet of paper describing morse code a high
school student could build a TX/RX CW radio and communicate around the
world! To the military that is power! CW uses the computer we all have,
our brain. I think that what makes CW most valuable is that when
atmospheric conditions change a dot is still a dot and a dash is still a
dash. This is not true of Voice communication. Note, efficient is wrt
humans sending and receiving messages using CW. For those purists,
please assume we have a CW capable radio.

The Icom IC-R2 was released in Australia about 3 weeks ago. Has anybody tryed it out yet? I was thinking of getting one but am under the impression that it is an IC-Q7 with TX dissabled since I already have one I dont need another one. I have been lead to beleive it is PC-programable.

Any comments e-mailled to my address would be appreciated.

Cheers
ERIC.

CB Rambo sez: "HAW HAW HAW!"

Actually, though, I always get the final post. It's "Still waiting to hear from your lawyer, OYE BOY!" Followed by dead silence from the other party. Then, as you have observed, the conversation is resurrected approximately six months later.

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

Welcome back, George. You may find some info of use to you at my site.

One major difference is the exams. They are given by teams of Volunteer Examiners, hams who have accreditation through one of several Volunteer Examiner Co-ordinators, such as the ARRL. The FCC does not give ANY exams at all anymore, ham or commercial. Anyway, stop by the Rat Shack or better yet your local ham radio shop, and they should have contact numbers for the local VE teams. Typically, in a large urban area, there will be an exam session somewhere about every saturday morning. Less busy areas might only have a session per month. Get an up-to-date study guide, and if you can't copy the code well enough for the license you want, get a good Morse Tutor program, like Supermorse. Software solutions IMHO beat the hell out of tapes. Also W1AW has code practice broadcasts several times a day. See a recent QST for sked. I hear them around 14047.5 and 18097, but there is a freq on nearly every HF band.

BTW, though Supermorse rus great under W95, it seems to give me fits under W98 and I have to run it in a DOS session. Bummer.

Good answer from Paul. I am in agreement. Another alternative that gives you more license-free power than FRS is CB. Hanheld CBs are pretty cheap, and you can legally use op to 4 watts, or 12W SSB. Lots of noise, though, and the occasional inconsiderate operator, but what a hell, you got 40 channels on most nicer CBsso you just change

Looking at the problem with my own narrow view, I would say you should consider getting a ham license, and legally use a 2 M HT, such as the ubiquitous Radio Shackk HTX-202. Though I am a die-hard Morse Code guy, for what you want, you might be satisfied with a no-code tech license, and just the aforementioned inexpensive HTs.

There is a bit of information for prospective hams at my site, URL in the sig. Hope this helps.

3892. Monitor HASH - HELP !!!!!!

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-11 00:00:00 UTC
From: "Glenville." <gsawyer@dove.net.au>
Message-ID: <35f8ff60.0@news.mtx.net.au>
Source record: 162133

I need a few more ideas:

Out there how many others suffer from bad R.F / Broad-band radiation from
their P.C Monitor ???

My P.C is clean and reasonably quiet across the High Frequency R.F Bands,
but while ever the monitor is running (hard to use the P.C without it
really), then the "HASH" level around here increases DRAMATICALLY, yes it
has the customary FCC radiation sticker etc etc, but that seems to mean
Diddly in actual
terms.

I have tried a "Ferrite Clamp" on the power lead, tried running from a
different power outlet to the receiver and P.C, and have tried a "Ferritte
Clamp"
also on the VGA cable to the monitor, can anyone throw some more (hopefully
Easy) to
implement ideas my way ?

Thanks - trust me I need all the help I can get.

Glenville Sawyer

Yes, but didn't they lose? ;-)

> The military until recently relied on CW as a means of communicating
> during war time. Even though the military is not using CW now, they are
> using another form of digital communication.

The military relied on Morse for a very short time actually. I think you will find pennant flags and semaphore have been relied on for much longer than Morse.

> Imagine this: several
> trained soldiers positioned around the world with very simple equipment
> relaying messages around the world using only CW. CW is simple, with few
> choice components and a sheet of paper describing morse code a high
> school student could build a TX/RX CW radio and communicate around the
> world! To the military that is power!

This is a joke, right? I suggest that you go to the local library and look at modern tactical and strategic communications. Why do you think they have invested all that time and money getting video onto HF, encrypted data communications and satellites when all they _really_ need is "several trained soldiers positioned around the world" "using only CW"?

> CW uses the computer we all have,
> our brain. I think that what makes CW most valuable is that when
> atmospheric conditions change a dot is still a dot and a dash is still a
> dash. This is not true of Voice communication.

Have a look at the error corecting modes like PACTOR and then compare them to operator Morse. You will find that PACTOR will still work when a dot is no longer a dot to the ear.

> Note, efficient is wrt
> humans sending and receiving messages using CW. For those purists,
> please assume we have a CW capable radio.

You are comparing apples and pears. If you want to compare the properties of Morse using OOK, then you have to compare it to another non-verbal digital mode. If not, you have to take the emotion content of the voice into account as it conveys information that Morse finds very difficult, if not impossible

to convey. In this respect Morse is always very inefficient.

Unless you are talking about poor SNR conditions, voice is a more efficient method of communication for the simple fact that it uses a wider bandwidth and is therefore inherently capable of transferring data at a higher rate.

Efficiency is a term which has no real meaning until there is defined criteria against which it is measured. In poor SNR, CW is more efficient, in good SNR, voice is more efficient.

Welcome back George. Unfortunatly you will have to start all over. The testing is now all Volunteer Examineer's. No more trip's to the FCC. Radio Shack has a good series of books. You can take the Extra right out of the hopper if you desire. But you need to read up on the requirements. Also check out www.arrl.org for some licensing info. After you get your license back, and if it isnt issued, you can apply for your old call back.

Gee, Jeffy. I wasn't aware that I specified these bands.

Don't worry; you beepers can have HF. Nobody wants those frequencies anyway. The wonderful display of radio professionalism and companionship will continue on 75 and 20 meters. But expect the amount of available VHF and above spectrum...where newer, codeless hams operate...to gradually be converted from amateur to commercial use. I've seen the proposals, Congress makes the rules, and the corporations have many more dollars to throw in the campaign coffers than does the ARRL. Wait and see.

Well, as far as Ham Radio being "Bring" to most kids I'd have to argue. I'm 15, and have been licensed since I was 13 (I'm a no-code TECH.) On several occasions I have taken my radio to school and found that at least a few people got interested in it. Most of these people were actually people who were into radio in the first place (CB or Scanners.) Sure, to most teens my age, Ham Radio isn't at all fun, but to me it is. Why did I get into it? I don't know. Am I glad I got into it? Definatly! And to answer some questions: No, radio isn't my life. Yes, I do enjoy the hobby. Anyway, I do agree that most teens that do get licensed rarely (if ever) go on the air. Most get on the air because someone in their family wanted them to. This 11 year old ham in my area has been licensed for 1.5 years. I've heard him on the air about 3 times over that period of time. Not suprising, huh? Didn't think so. There are teens out there on ham radio. I regulary talk to a 16 year old local ham on a repeater.

I'm know that you realize this, but in case the original poster
doesn't, this is nothing particular to the amateur frequencies.
Information you transmit via ANY radio communicator, including
radio transceivers commonly known as "cellular phones", is not
private.

Right! That's what they normally consider a loss-leader. I can't believe
that wouldn't already be accounted for in their prices. If I'm asked to pay
for the 1999 catalog, I'll probably do so, but not without protest. I'll
bitch and moan on the local repeaters and so forth. That's ridiculous.

Several users have complained that they are unable to connect to the W8MMQ web site. For that matter, people have been complaining to the server admin about the content of the web site. If you don't like the site, then just don't visit it!

Anyway, I have set up a backup site, http://members.xoom.com/w8mmq/. Use this if you cannot access the site on QSL.NET.

Again, if you cannot "stomach" the web site, then don't waste your time visiting a second time, or complaining to me or anyone else about it. It is my site, not YOURS!

BTW. To download the complete Starr report, click on the nuns-with-guns pic on the front to enter the site, then scroll down to the Up Front section. Click on Starr report, to begin the download process!

WARNING: The file is in .ZIP format. It contains highly explicit material (language, etc) and should be read only at the viewer's discretion.

73 de,
Dan/W8MMQ

More unsubstantiated allegations, eh, OYE BOY?

> (its been known
>to happen). That kind of harrassment causes problems and eventually loss of
>employment for no real good reason . See my point now? I don't have to reveal

>where I work (in fact, I cannot because of Security issues on said job).

You don't have a real job anyway, so the point is moot. Can't "reveal" what you don't have.

>Personally, I don't care what CBRambo does, so long as he keeps it to himself
>and ceases interfering in my activites (on-line or off). Since this is not a
>direct response to him, it does not qulify under my previous postings issuing
>a cease and desist notice.

Gee, thank you, OYE BOY! I sure am glad to know that I have your personal approval to respond. Gosh, I just HATE to think of what might happen if I violated your self-imposed "ceasee and desist notice" and replied to you without permission! (What a freakin' JOKE! Where do you get this nonsense from? Old Perry Mason reruns?)

>Yous future look at this conversation has already deviated from the "planned
>event sequence" by a considerable amount. It is humorous though. However, I
>did not resurrect this, and choose to remain uninvolved directly. Anything
>cbrambo has to say, he can say to empty ether.

Thank you for your expert opinion, OYE BOY. Here's another clue for you, though: when you RESPOND to a thread, you become involved. Funny how that works, isn't it? Maybe someday your little pea-brain will finally understand that the way to make threads you personally dislike to disappear is to IGNORE THEM. DON'T RESPOND. As usual, you're still below sea level on the learning curve.

Still waiting to hear from your "lawyer", OYE BOY!

"Where's that big 'ol CB RAMBO??"

Ahhhhhh he'll probably resurface like a boil that refuses to heal. Types like CBDumbo, Covert(Pervert) 62, TheLibNut, etc. are so full of hate and ignorance that probably the graveyard is the only thing that will bring some peace to their troubled souls. Covert(pervert) 62 must REALLY be full of hate as I've seen prior web pages he's made just to express his hate for someone, can you imagine what a miserable life one must lead to go to the time and trouble of making a hate-page ?? Perhaps we can hope he and his ilk will spend more time drunkenly belching into a microphone instead of posting on usenet.

3914. Read The Thread Before Responding

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-12 00:00:00 UTC
From: k5pf@aol.com
Message-ID: <1998091209295900.FAA27690@ladder01.news.aol.com>
Source record: 161955

Advice to newcomers:

Believe it or not, there are individuals who make controversial postings to a newsgroup in order to "stir things up" and get a lot of responses. (gasp!)

A good rule of thumb when participating in NG's is to read the entire thread before responding. The benefit's are:

* Someone may have already answered the question being asked (in the case of a legit posting). If so, you can agree or amplify without repeating what has been said already.

* If the NG participants are being "baited", you will pick up on it very fast and can save your time for more productive surfing and browsing.

* You can see if the thread has outlived its usefulness. The first eight to ten messages usually are the most fruitful, in tems of information. After that, it tends to move toward discussions among folks who "major in minor points", or it drifts off topic, or (in rare cases) it trails off into name calling.

Newsgroups are a lot of fun, besides being informative. There are some good minds on the Internet and if you have a question, someone will give you the benefit of their experience or their opinion--you can count on that!

However, it's best to read a thread before jumping in.... Just as you don't physically walk up to a group of people and immediately start talking. Hopefully, one listens to the conversation for a few exchanges before jumping in. Same principle for newsgroups.

(Works on 2 meter repeaters, also.)

73 to the group, and keep the good stuff comin'

61. I think I got my Novice license in 1952, 46 years ago when I was 15 years old. I was copying w1aw a couple years before I took my first test, which means 48 years ago. I might be off a year one way or another, but I did have my license before I turned 16.

3930. Ham Radio Plates

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-12 00:00:00 UTC
From: Bill Smith <bs@BSartist.com>
Message-ID: <6tduo5$4ik@bgtnsc02.worldnet.att.net>
Source record: 161971

Folks,
Here's an odd question for this newsgroup.... :-)

Has anyone looked into Ham Radio license plates that are also commercial
license plates in New York State?

I'm buying a pickup that I need to register as Commercial but I'd like
to put Ham Radio plates on it. I'll also call DMV but given my experience, I
suspect I'll get better quality info here ;-)

I fail to follow your logic, Vietnam Dan. How can a suggestion that someone
not get started with ham radio be equated with a suggestion that someone
already licensed "get the hell out?"

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

Vince didn't say the CW test keeps "bad" operators out, he said it keeps the
sick, lame, and lazy people out. I'd have to say it is working, too, Mark,
since it has kept you and your incessant whining off HF.

Of course, the digital voice modes are more "private" than
the analog voice modes because 250,000 hams don't have un-
locked UHF rigs capable of decoding digital voice.

Could some one please tell me where I can find the Technical manuals for a Collins R-390A/URR? I am new to Amateur Radio with a tech license, but use the radio to listen on HF. I can recieve AM and CW just fine, but I think the internal BFO pitch is off because I cannot get SSB. I have tried tuning in on the KHz knob while adjusting the pitch, but I still cannot get a clear voice at all. I am prepared to purchase a copy or authentic manual for the radio, but if someone could tell me where the internal adjustment is I would really appreciate it! Thanks.

I just bought a brand new used Kenwood TS-700A 2m all-mode rig,
and the manual hasn't arrived yet. I am totally unfamiliar with
operating any SSB, let alone this rig, but was thinking I'd
really like to try to participate in the VHF QSO Party this
weekend. (This would also be my first contest.)

Can anyone give me any instruction on the workings of this
particular transceiver?

Any contesting advice is appreciated, too. I have a little
horiz pol yagi, about 20-30 feet off the ground.

Thanks!

You should have licensed authorization from MARS/CAP in order to transmit on
those frequencies.If so, then page 16 of your owner's manual has the propcedure
in detail.

Source record: 161994

I am wanting to purchase a handheld radio. My needs are fairly minor. I would like to be able to scan emerg. freg., rx airport freq. and tx/rx 440 mhz. Any suggestions as to a durable radio I should look into.

brad

3954. SB-200 help needed.

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-12 00:00:00 UTC
From: Michel Morin <morinm@csdgs.qc.ca>
Message-ID: <QAyK1.2299$UQ.13398628@carnaval.risq.qc.ca>
Source record: 161995

Hi there I've got a problem with a Heathkit SB-200 linear, it gets out less power than I put in it. I opened it, checked everything, nothing is burnt or broken. The tubes light and glow a bright orange when I transmit. When I put 100 watts in it, I get between 80 and 130 watts out with a perfectly resonant
dipole on 3.790 mhz. I took some electrical readings which I post below, maybe someone can put some sense into this. The tubes are 2 Raytheon 572B in parallel.

While in receive only, transmit relay off:
Plate voltage is 2400 volts.
Plate current is 0 ma.
Grid voltage is -134 volts.
Grid current is 0.

With transmit relay on, no signal in:
Plate voltage drops to 2350 volts.
Plate current is 80 ma.
Grid bias is -134 volts.
Grid current is 0 ma.

With transmit relay ON, 100 watts input:
Plate voltage drops to 1950 volts.
Plate current is 700 ma. A little too high.
Grid bias is -2.2 volts, quite normal.
Grid current is 60 ma, I think it's too low.
Power output varies between 80 and 130 watts depending on the temperature of the tubes. I checked with 2 different wattmeters.
The tubes glow a bright orange but one more than the other.

If anyone can make sense out of this, please reply be email or post your comments here. If anyone wants it for $200.U.S. shipping and insurance included to your QTH, just drop me an email. Thanks for any answers and take care.

Actually, it's quite telling of your ignorance, since you obviously couldn't
pass even the Novice test. You are disgustingly limp with your responses,
doodlefuck. That's why you dodged the question, and steal others' material,
because you're too bloody ignorant to think up your own.
Maybe it's because your often-absent father wasn't there to sodomize you during
your childhood, and your uncle had his way with you, for the most part.
Your "mind" is like a Roquefort cheese, so ripe that it is falling to pieces.

It's some of that new fangled "sarcy-asms," straight from the back woods!
YEE-HAW! What a knee-slapper, Jethro!
There are those who _DO_, and there are those who take the credit, so it's
better to be one of the former, because there is _less competition_ then being
one of the latter.

Let me show you how the game is played. Take notes, now:

I flame your ample rear-end to hundreds of degrees in the Kelvin scale. All you
can respond with is pitiful one-liners and post header name lames that one
stops engaging in when they get out of 7th grade. That, alone, speaks volumes
about your mindset, such as it is. I do hope that your next response displays
at least an attempt at something that could conceivably pass, even by your
troll friends, as coherent thought, because at present your witless drivel is
barely worth my time.
Given the prospect of being percieved as a "spammer" versus an imbecile by

intelligent, reasoning adults, I'll take the former in a New York minute. Your mileage may, and obviously does, vary.

Your turn. With some intelligence, this time, please.
I know that's asking a lot.....

"Y'all come back now, y'hear?"

Are you using the recommended Heath tune-up procedure. Are you getting
a dip in grid current during the tuning process? The pi-net tuner on
that amp is somewhat like the autotuners built into transceivers in
that it does not have a very wide tuning range. What's your feedpoint
impedance? Is your SWR under 3:1?

This weekend you can contact a Special Event Station on AM from
the FINAL Gaithersburg Hamfest (FARFEST) operated at the
Historic Gaithersburg Fairgrounds in Gaithersburg, Maryland.

Look for W3PRL or KB2APE on 3880-3885, 7290, 14285 and 29000 kc/s
with a fine booming AM signal. The AM Corral Gang will be holding forth
with a fine signal and introducing the Hamfesters to the delights of operating
AM with those good old vintage radios, known affectionately by some
as "Boatanchors!"

I don't believe that you will be able to receive SSB with the R390A as is.
The BFO is for CW and wasn't designed for SSB. There is a companion SSB
unit that takes the IF output of the 390 and allows for USB/LSB RX.
I don't remember the model number of the unit. I had a 390A and the SSB
unit, but sold them 2 years ago at a ham fest.

cheers

Rick

Just to let you know, Burt, there are several places from which you can seek help.
Your cries are not going un-noticed, but you must take that first step yourself. Admitting you are in need of help will be your first step on the road
to full recovery and a full life, away from Amateur Radio.
Those who have conquered an addiction, such as yours to the horrible Amateur Radio
Service, know it is threatening to you, but you must take that first step.
Delete the Amateur News Groups from your browser and see if you can live without
them. Remember, it's one second, minute, hour, day, week, year at a time. But,
you can do it.
Many of us wish you the best on your new journey.

In a previous article, heavenly@inspace.net ("bobz") says:

>Looking for a mod to extend the freq. TX coverage to receive freq. or at
>lease more than their programmable extended coverage. Thanks Bobz

Carefully remove the back of the HTX-242 case. Solder a 50-ohm, 5-watt
resistor across the antenna leads. Put the radio back together.

3975. Illegal users on 2 meters and 440

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-12 00:00:00 UTC
From: Ted Woodzell <tjwood@va.tds.net>
Message-ID: <01bddde6$331b84e0$ca5689d0@tjwood>
Source record: 162016

Hi, and thanks for having a peek.
For several years I've been complaining to FCC, ARRL and anyone else who would listen, about the illegal operators local to me on 2 meters (and 440). At the request of Joe Husnay
(jhusnay@fcc.gov) I have in the past year alone gotten names, addresses, phone numbers, recorded the day-time-date-name-frequency in a log type format, and made tape recordings of the most active users, and now I'm told there are no plans to investigate. At the request of Tony Amato KR4UQ I even got license plate numbers off the vehicles, (but not sure wheather or not to send them).
My LEGAL use of these bands has been severely interfered with for about three years, and I've tried to be nice to everyone involved, but nothing has helped.
I'm very much aware that this is not a new problem, and I'm not the only one to have it (the problem) but was hoping for some constructive comments on the matter.
Thanks All
Ted Woodzell KR4KJ

According to Chuck Dachis's "Radios by Hallicrafters" (Schiffer Publishing
Company, 1996) the price range of the HT9 in good condition is $150-250.

Hi John!
If your computer specs specified that it can be powered from a car 12 volts system you should know that such a system provide in reality 14.2 volts dc when the engine is running, so you now only need to drop you battery pack .8 volts so a good diode will do the job. And if you want to use a three pin voltage regulator don't forget that there is about 2 or 3 volts absorbed by the regulator himself between the input and output so the 15 volts source will become 3 volts down say 12 v. when the battery is fully charged.
Good luck !

SB DX @ WW $OPDX.374
Ohio/Penn DX Bulletin No. 374

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 374
BID: $OPDX.374
September 14, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, KE1Y, NC1L & DXCC Desk, N1OLO, WB2RAJ/WB2YQH & The 59(9) DXReport, AC4G, K8YSE, WB8YJF, CT1FRN, DL4MCF, F6AJA & LNDX, G4BUE & DX News Sheet, G0TSM, HL5FOP, JM1LJS, ON5NT, PS7AB, RW0MM, VO1XC and Z32ZM for the following DX information.

3V, TUNISIA. Eddie, W6/G0AZT, will once again be active from here. Look for him between October 15-20th from 3V8BB and participating in the JARTS Contest. Activity will be mostly on RTTY and on 80-10 meters with only a 100 watts. QSL direct only.

5A, LIBYA. The "DX News Sheet" reports that Abubaker will be active as 5A29, September 2-7th, to commemorate the 29th anniversary of the "Revolution of Libya". QSL via 5A1A.

6K98/D98, SOUTH KOREA (Attention Prefix Hunters). Look for special event stations D98WCX and 6K98WCX to be active now until November 10th. These stations will be operating SSB, CW, and SSTV. Operators are from KARL (Kyongbuk branch -6K0ZZ) and Kyongju HAM club (HL0FSI), and they are on the air in celebration of "The Kyongju World Culture Exposition". QSL via Bureau or to HL5FOP (P.O.BOX 97, Kyongju, 780-600, KOREA). Help with more details and questions can be obtained by Jung, HL5FOP, via E-mail at: rayman1@chollian.net

9V8, SINGAPORE. Look for special event station 9V8SEA to be active between November 13-15th during the "SEANET 98" convention. Activity will be on all bands including 6 meters (CW 50085 and SSB 50115 kHz). For further information on "SEANET 98" contact 9V1UV at: Comline Services, 622 Serangoon Rd., Singapore 218222; or via the InterNet at the E-mail address: seanet98@sarts.org.sg

9Y, TRINIDAD AND TOBAGO. Members of the Bavarian Contest Club (DK6WL, DL4MCF, DL4MDO and DL4MEH) will be active from Tobago Island (IOTA SA-009) from October 15-31st. They will be an entry in the CQWW DX SSB Contest

as a Multi/Single using a special callsign (callsign was not given). They will be on before and after the contest using 9Y/homecall on all bands (160-10m) on CW/SSB/RTTY. QSL via bureau to their homecalls and to DL4MDO for contest QSOs.

CT98, PORTUGAL. Portuguese amateurs will continue to use the prefix CT98 (also CS98, CQ98 and CU98) until September 30th, during their "Expo 98". Claudio, CT1FRN, has been signing CT98FRN almost every day on 20 meters from 0000 to 0200z (giving out 2 points for a special award for the "EXPO 98"). QSL CT98FRN via CT1FRN to the bureau or direct to: Claudio Cepinha, PO Box 247, 2871 Montijo, Portugal. For details on the special award check out the Web page: http://www.rep.pt/de98_i.htm

FH, MAYOTTE. Bruno, TK5PB, will be active as FH/TK5PB from November 12-25th. He plans to be active from a few different islands such as Grande Terre, Petite Terre Brandele and Bambo. He will only be active on SSB. QSL via his home address at: Bruno Padey, Le Magenta 1, F-20169 Bonifacio, France.

FW, FUTUNA ISLAND. Marcel, ON4QM, is here as of last Thursday and is active as FW5XX. The "LNDX" states he will stay on the island for 2 months. Activity will probably be on all bands. QSL via CBA.

IOTA NEWS.....
AF-073. The DXpedition to Qerqenah Island which was planned for September 11-18th (refer to OPDX.369) had to be postponed until the second half October, with dates around the CQWW DX SSB Contest. Mome, Z32ZM, was inform by Hrane, YT1AD, that there was some kind of administrative problem. However, all other preparations for this IOTA DXpedition are going fine.

EU-011. Shaun/M0BJL and Darren/G0TSM will be operating from the Island of St Martin`s in the Isles of Scilly from October 2-5th, using the callsign GB4SM. They will be operating on all bands from 80-10 meters and at times there will be 2 stations on the air. The main operation will be on SSB, but they will try some CW. QSL via the bureau or direct to: Darren G0TSM, 10 Swift Close, Eastleigh, Hampshire, SO50 9LD, U.K. More detailed information about their operation is available on Darren's WEB page at: http://www.qsl.net/g0tsm/

NA-136. The Greater Norwalk Amatuer Radio Club will activate Sheffield Island (USI CT008s) on Saturday, October 8th, from 1300z until sundown local time. Operations will on 80-10 meters including the WARC bands (conditions permitting). Activity on both CW and SSB can be expected. They hope to have 3 stations operating simultaneously. QSL DIRECT ONLY! Please include a SASE or an IRC. If you have any questions please contact N1OLO via E-Mail at: N1OLO@qsl.net

SA-071. Look for PT2VE to be active from Santo Amaro Island (DIB 10), October 22-26th. Operations will be on SSB/CW with activity on 80-10 meters. QSL via the Bureau or direct to: PY2YW, A. Demarinis, PO Box 65002, 01390-970, S. Paulo/SP.

KH0, SAIPAN. Kazu/JA3ART and Hide/JM1LJS will be active October 16-19th, as KH0/N3JJ and KH0/JM1LJS. Activity will be on all HF bands and including 6 meters. QSL KH0/N3JJ to: Kazuo Ebihara, P.O. Box 62, Sakyo Kyoto 606-8691, Japan or via bureau to JA3ART. QSL KH0/JM1LJS to: Hideyuki Kai, 915, Takata, Kohoku Yokohama 223-0063 Japan or via bureau to JM1LJS.

NEW ENTITIES ADDED TO THE DXCC LIST. If you are not a subscriber to the OPDX's InterNet Mailing List, you missed the announcement this past week that the ARRL Awards Committee has accepted a recommendation of the ARRL DX Advisory Committee to add the Marquesas Islands and the Austral Islands to the DXCC List. The additions will be effective with contacts made beginning 23:59 UTC on 31 March, 1998 and after. The DXCC Desk will accept QSL cards for both the Marquesas and the Austral Islands beginning October 1, 1998. QSL cards received before that time will be returned without action.

QSL INFO AND NEWS......
Bruce, AC4G (ex-N4GAK), QSL Manager for Ken, V73C, reports that Ken has retired V73C as of August 25th. Ken has moved stateside to Washington state. No other details are available now, but Bruce will follow up with more details later. As some folks know, Ken got married earlier this year to Irina, a YL from Moscow.

SPECIAL EVENT STATION. The "DX News Sheet" reports to look for GB100AR next weekend, September 19th, to celebrate 100 years of amateur radio and the first two-way trans-oceanic amateur radio contact in 1923 between 8AD in France and 1XAM and 1MO in the USA.

SPECIAL EVENT STATION (FAR EAST OF RUSSIA). Special event station UE0LLL will be active on the air now until October 8th, in celebration of the 70th anniversary of the first Russian Far East hamradio station,"AS3KZ" (which began on October 5, 1928). The station will also commemorate its 1st operator Vlad Mekhailoff, UA0LL, (1911 - 1988), the radiopioneer. The station is located in the port-city of Vladivostok (CQ zone 19). Activity will be on all HF bands, CW/SSB. QSL via bureau or RW0MM, CBA.

SV/A, MOUNT ATHOS. Thanks to Dominic, DL5EBE, a rare treat has taken place over the last week and will possibly last until September 20th. Dominic is currently visiting Monk Apollo, SV2ASP/A, and is installing some new equipment which includes an antenna for 160 meters and new antennas for 80/40 meters. While there, Dominic has been active on "CW" as SV2ASP/A which is very rare from here. Also, look for some RTTY activity while Dominic is there. By the way, Apollo's station is ONLY 100 watts. QSL via Monk Apollo, Dochiariou Monastery, GR-63087 Mount Athos, Greece - Europe.

V6, MICRONESIA. "The 59(9) DXReport" states to look for JH1BLP, JP1WDN and 7L1PBB to be active September 14-21st as V63LP, V63CV and V63DI. Their activity will be on 160-6 meters, CW and SSB. QSL via respective homecall.

VP8, FALKLAND ISLANDS. Carl, G4VFU, who was active from here earlier this year is currently back in the U.K. for a well deserved break. Carl will once again be on the air from here (activity on 80/160 meters), beginning

September 20th to 23rd, as VP8CJZ. Carl states that there was some confusion last time on where he was operating from when he uses the /mm (maritime mobile). When Carl is operating as VP8/G4VFU/mm, he is operating from the vessel. When Carl is operating as VP8CJZ, his new callsign, he is operating from the Falklands "on shore and ground". Carl is now on the InterNet, and he will answer any of your questions or verify the log at: CTFW18@hotmail.com

XX9, MACAO. Jon/WB8YJF and Leo/K8PYD will be leaving September 20th to be active from here and then return on October 1st. They plan to be active in the upcoming CQWW RTTY Contest and hope to use the callsign XX9YD, if they can get Leo's old callsign back, or else they will try to get XX9TJF or XX9TRY. They also planned to be active before and after the contest. Jon states that he will be taking his TS-830S and AL-811 amp. They will use a 3 element beam on 10/15/20 meters, a vertical for 80/40 meters and dipoles for the WARC bands. They will try to work some 30/17/12 meters RTTY. There may also be some VR2 activity before and after the contest.

ZD9, TRISTAN DA CUNHA AND GOUGH ISLAND. A station signing ZD9/ZS1B was up and active on 20 and 10 meters this past week, but has now gone QRT. The operator named Bud who came with the supply ship from South Africa, states that he would be moving to Gough Island (rare IOTA AF-030) during this past weekend. However, while preparing this bulletin it seems this operation did not take place due to heavy winds gusting to 60 knots. Because of the high winds, the helicopter could not land on the island. Access to Gough Island is via a helicopter due to the steep cliffs. It was mentioned by Bid that if landing is unsuccessful, the ship will return in two weeks for a 3-5 day stay on the island. Hopefully, the weather will co-operate.

>any sense.
>Mike in MO.

Many of today's 2m mobile radios contain a receiver which is capable
of scanning all its memories. Thus, such radios fall in the catagory
of "scanners." Without the exception you mentioned, many models could
not be legally installed in automobiles. (Thank-you to the ARRL for
asking states to include that exception!)

Also, hams conducting public service work (ARES, RACES, Skywarn, et al)
may need to have a stand-alone scanning receiver in their automobile in
order to effectively carry-out the work for which they've volunteered.
States (with the ARRL's prompting) recognized this as a valid reason for
hams to be an exception.

Radio Amateur's Handbook, 1922, by Frederick Collins. Published by Crowell. $75 US.

Hardcover bound in red, approx. 7x5 inches. Aside from a split on the inner hinge of the front board, it is in very good condition.

100 diagrams, 10 photos. See www.globalserve.net/~peatmoss/rah.htm for samples of photos and diagrams.

Some of the chapter headings:
Short Wave Regenerative Receiving Sets
Heterodyne or Beat Long Wave Telegraph Receiving Set
Headphones and Loud Speakers
Wireless Telephone Transmitting Sets with Direct and Alternating Currents

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 13/2330Z SEPTEMBER 1998 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 13 SEPTEMBER AND FORECAST FOR 14 SEPTEMBER - 16 SEPTEMBER
STATUS INDICATORS SOL:GREEN MAG:** YELLOW ** ION: GREEN

1A. SOLAR SUMMARY
Activity 13 Sep: Low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number for 13 Sep: 131/85

GOES satellite data for 12 Sep
Daily Proton Fluence >1 MeV: 2.5E+05
Daily Proton Fluence >10 MeV: 2.0E+04
Daily Electron Fluence >2 MeV: 2.80E+06 (normal)
X-ray background: B5.7
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
14 Sep 15 Sep 16 Sep
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 14 Sep: 125/78

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 13 Sep: Quiet to unsettled

Estimated Indices 13 Sep : A K
Learmonth 8 3223 1212
Fredericksburg 7
Planetary 9

Observed Indices 12 Sep : A K
Fredericksburg 9
Planetary 12 2233 3332

2B. MAGNETIC FORECAST
Date Ap Conditions
14 Sep 8 Quiet to unsettled
15 Sep 10 Unsettled
16 Sep 17 Active
COMMENT: Recurrence suggests mild increase in activity can be

expected 15-16 September.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
13 Sep Fair Normal Normal
PCA Event : No Proton/PCA Event In progress

4024. Shocking revelations about ARRL?

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-13 00:00:00 UTC
From: burt@imfamous.com
Message-ID: <6tg6pqqfl1@nnrp1.dejanews.com>
Source record: 161890
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

The following are comments by a former high level employee of the ARRL. The organization seems to be "Of by and for the administrator." Additionally there are some
serious concerns that the ARRL is working AGAINST the interests of amateur radio.
This is the opinion of a well respected person. What does the ARRL say? Based on what I have experienced with the ARRL the following is believable. What do you say?

Here are the comments:

As I've already mentioned, life at ARRL HQ was no picnic, although I really did love the work. Your friend and mine, Dave Sumner, turned out to be a very calculating, extremely intelligent and ultimately devastating-to-ham-radio person. And, as understanding of the organization as YOU are, I think you might be taken aback by the things that have happened there in recent years.If you knew about them.I'll throw a couple of hints your way, just to get your blood boiling a bit:1. Do a search in Part 97 regulations for "National Radio Quiet Zone". Do some digging. Don't bother looking in Part 97 for this, but try to figure out what organization benefited from silencing all radio amateurs for 100 miles in all directions of one of the many domestic "offices" of this organization.In the rules, you'll likely find mention of a DIFFERENT organization (The National Radio Astronomy Observatory) which purported to be the ones benefitting. Partially true; they did benefit. But the other, far more sinister organization, is also mentioned, by not by name, in that radio amateurs are required to get approval from BOTH organizations, before attempting to do their FCC-approved transmissions from within the quiet zone.Try to discover why ARRL never lifted an effective finger, nor uttered a sound, to stop the Quiet Zone, since they (ARRL) otherwise purport to be on the side of radio amateurs. Hint: ARRL Ex Director Mendelsohn, ex-President W4RA, and several other present and past paid employees were PURPORTED to have ties to NSA . So was I, in the late 60s, but that's another matter.By the way, the Quiet Zone was actually implemented in 1958. But radio amateurs were not affected until the no-named agency went to the NRA in the early 70s and said "things are too noisy out here in extremely rural West Virginia; we need to shut down all the hams; will you be our cover and get the FCC to get 'em the hell off the air? Please? And don't worry about the hams;they only have one organization looking out for them, and we've got that little problem covered..."Almost 30 years later (last month), I happened upon mention of Microsoft's new"TerraServer" which allows you and I to see, from Russian satellite perspective, levels of detail such that you can see your house nicely and be very confident that it IS your house. By going to their web site, I

pannedover that mountainous, rural, people-less terrain in West Virginia, and lo and behold, there were the two organizations. If you're REALLY curious, go the library and find a book entitled "The Puzzle Palace" by Bamford. In the chapter entitled "Platforms", you'd learn who the organization is and how it is that they can conduct completely illegal electronic spying on your phone calls, made much easier, now that the hams aren't being so pesky. 2. Now that Senator Goldwater has become a silent key, you might want to examine as much documentation as you can about his dealings with the Federal Communications Commission and the ARRL. Ask yourself WHY his bill (Public Law97-259) was deemed to be such a wonderful thing, when in fact it resulted in the following very BAD things for the Amateur Radio Service:A. Zero examining efforts by the FCC / greatly increased income (for the ARRL) by way of the VEC program (yes, I thought that might strike a resonant chord with you...) B. Zero enforcement efforts by the FCC / greatly increased duties by the ARRL. In fact, PL97-259 explicity allowed for the ARRL to form the Amateur Auxiliary to the FCC's Field Operations Bureau, but K1ZZ, W4RA (there he is again, notice any trends?) and Director TurnBull, W3ABC, all made certain that Goldwater's law NEVER allowed for any means of actual enforcement to occur.Of, by and for the radio amateur? Yah. Right.All these years later, it's interesting to see the newsgroup ravings about KV4FZ, WB2OTK and K1MAN. Subsequent to the Goldwater law being enacted, I was tasked with documenting illegalities against those three folks, and I did so quite successfully. K1MAN sued me (and several others at HQ) but on the day that Baxter came to Newington, acting as his own counsel, I was shuffled off to an ARRL convention in either New Mexico or Arizona, I forget which. They did send me to Florida to meet with 'FZ and as for Whitten, I'd already run into him on the Cape and wanted no part of him in person at least, after that.In any event, all these years later, all three are still on the air, having a grand ole time. In any event, Burt, that's the scoop. Oh, one other thing that'll make you smirk, if not outright guffaw. My best friend, who was forced to take MY job, once I was fired, and I, frequently communicate by email. A couple of months ago, I happened upon one of your REALLY excellent W1AW transformations, and decided to forward it along to my buddy. As it turns out, they're under a gag order with regard to email communications (which, come to think of it was the main reason I was fired; I refused to abide by their asinine gag orders) -- and he never responded with so much as a "dih dar dit" about it. Kinda comical, actually.

I have used lots of older type receivers for SSB and most of them work reasonably well if you use the CW position, which turns the BFO on. Then the audio gain should be turned up, ususlly all the way and the RF gain control used to control the volume. That way the SSB signal does not over power the VFO signal. The VFO is replacing the carrier so that the detector demodulates the signal like it was AM. The VFO needs to be set to one side of the passband or the other. Which side depends on if you are on USB or LSB. For USB the BFO should be placed on the lower edge of the passband.
In addition you need to use a selecetivy position that is 2.1 or greater.
Tuning the SSB signal after doing the above should be done slowly but can be done and you will get better with practice.
I hope this helps.

Have you failed to read the rest of the thread?

The FCC interpets that rule, to mean that only HAM frequencies, as in,
a novice can use a advanced frequency.

They have stated that it does NOT mean that a HAM can use a public
safety frequency in an emergency.

God, how long is this nonsense gonna repeat itself. I think by now we all know that yes, it IS illegal 99.999% of the time to transmit on police frequencies. But yes, we're also all aware that many amateur radios can be modified to do so. Can't we just leave it at that? Sheesh!

The FCC could care less about amateur radio and the ARRL has no enforcement powers. Nothing will be done. Best thing you can do is invest in a power amplifier and/or high-gain antenna and override the illegals. Law of the jungle applies here; only the strong survive. I'm sure I'll get lots of flames here, but hey, that's the American way these days. Survival of the fittest and the hell with everyone else. Step or be steepped on.

You don't comprehend well, do you, Woger? Guess they don't teach reading comprehension skills in West Virginny.

I have never transmitted on 75 meters. I never said that I ran anybody off; I said that Vietnam Dan was run off of 3901 on a nightly basis. This can be confirmed by simply listening to the frequency in question on any given ev ening. Again, with emphasis so that perhaps your feeble moonshine and coal-soot-infested brain might understand: I never stated that I personally was the one who ran him off. In case you're not aware, SWLs can and do listen to the garbage on 75 meters with receive-only radios.

Get it now?

4059. Special Events - Include the Novice

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-13 00:00:00 UTC
From: Mike Neiner <kc7maw@qsl.net>
Message-ID: <6tgvgb$l8m$1@supernews.com>
Source record: 161925
Cross-posted to: alt.ham-radio.hf,alt.ham-radio.morse,alt.ham-radio.ssb,rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

I'm a Tech - Plus and have been banging out contacts on the novice portions of the 15, 40, and 80 meter bands. My code speed has increased dramatically since deciding to get on the HF bands doing code instead of hopelessly practicing with audio tapes until reaching 13 wpm and then never going back to CW once upgrading (that's what many of our fellow hams do). For all you old timers out there who love their code and feel it should stay, well I agree. I was wondering why virtually all the special event's do not include the novice portions of the HF Bands in their Communications Plans. I'm beginning to think that the Ham community (deliberate or not) excludes the novice operator from special events when actually they should be providing the new guy every opportunity to participate. Setting up on a Novice Freq is not a whole lot of effort, but would reap much benefit. Especially when considering that our lower ranks are dwindling and techs are never going past 5wpm.
The FCC with the ARRL are considering major changes to the CW requirements and has created an explosion of debate. I think the ARRL is doing the right thing. Ham Radio is dying a slow death. Perhaps all Hams should ask themselves what they've NOT DONE to help the new guy thereby forcing the ARRL to take drastic measures to save the Hobby. Does the word SPECIAL in "Special Event" mean "Novice need not show up" ?

hmmmmmmmmmmmmmmmmmmmm

Well, it's not illegal to possess a radio capable of txing on any band, as long as you don't actually tx, we know this.
I am just curious about the illegality of having a simple scanner in your car. What POSSIBLE difference does "being a licensed amateur" make when it comes to scanners, which are receivers only? Do you have to have a license to RECEIVE scanner signals? NO. Might as well have a SWL license, ferchrissakes...
So why is it illegal for non-licensed scanner buffs but okay for hams to have mobile scanners? To date, no one has ever been able to provide me with a logical answer to these questions. A legal answer, sure, but it deos not make any sense.
Mike in MO.

4064. Skytel SkyWriter Pager mods ?

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-13 00:00:00 UTC
From: RHS Linux User <aaa@bbb.ccc>
Message-ID: <35FC1B61.49362CB2@bbb.ccc>
Source record: 161930
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.ham-radio.packet,rec.radio.amateur.packet

The skytel skywriter 2000 pager is a nice little unit which runs it's own OS and allows developers
to create apps to run on it. It includes a small multi-line display and fairly usable small keyboard all
in a compact unit. While attending an IETF conference recently Motorola loaned attendees these
units for the week and I had a chance to try one.

I was wondering if anyone else had thought about or looked into modifying these units to work with
packet? Seems llike the perfect little unit! The units can be purchased for around $300 and if they could
be modified to operate on Ham frequencies surely software could be written to handle packet.. From there
I can think of all sorts of interesting apps such as display of simple APRS maps, DX cluster alerts with
greater urgency if the region of the world you were interested in started showing up a lot, perhaps even contest logging. How about
sending quick notes directly between two units while at a Ham Fest.

I was curious about this pager generally so I have sent for a free developers kit (also part of the conference promotion) This will give me
software answers. Anyone willing to try to open one up to see about the frequency issues?

The FT-50 is that way. I don't know anythign about the vx-1r's computer cable, but I believe that it too needs one. If I were you, I'd call Yaesu and demand that they send you the small 4" adaptor cable to complete the defective package. They should send you one for free and it ahould arrive is a week or two. But teh adaptor cable should've been in the package anyway, so the computer kit should still be under warranty as long as you have the origional recipt.

> P.S. If I have the VX 1-R receiver with Firmware version A106, will your
> software, or any other software open up the 800MHz frequencies?

From what I understand, a1.06 can't have the cell restored in any way. But if all you want to do is listen to cell and not have a complete rig, you can try listening to image freqs.

> Also, Does anyone know if you can open up the 42.00-43.00 MHz frequencies
> for recieve? I noticed that the unit starts higher than that, and I would
> like to be able to hear the 42-43 MHz freqs!

I don't know how to go that low by programming it into it. But here's the trick I do with my FT-50 to get it to do freqs that the CPU won't let me tune normally. I first program in my fres as close as I can get. I then use the computer interface to download the memories to a computer file. I then use a hex editor to manually edit the file. Freqs are stored like 50000 for 500mhz, 07652 for 76.525mhz etc. The last digit get's clipped off. I find teh freq and confirm that that's the freq by looking at the freqs above it and below it. And then type in what I want to be stored there. I've even been able to go down to .0025mhz. But the radio just won't recieve anything there, I do it just for S&Gs. I then re-upload the memories to teh radio. Presto, I get out of band stuff. The vx-1r's memories will be stored slightly differently than the ft-50, but it'll be about the same concept in editing.
In fact, this might be a way to restore cell on the unit, in a roundabout way. Enter in two 800.000mhz freqs with 30khz steps in the search bank(s). Download the memories to a file and edit it. Change the two U and L freqs to the upper and lower levels of the cell band with a hex editor, anbd make sure that they're within the cell bands. Avoid editing teh memories with the ADMS software, or it could ruin this whole plan. re-upload the plan to the radio and tell it to search that bank. It should work, but I don't own a vx-1r so I can't confirm this trick.

Oh, here comes legal-eagle Jeffy from Hawaii. Gee, Mr. Know-it-all, do you
think that just maybe he wanted to modify the radio for MARS/CAPS use?
Regardless of his intention, we live in a society where the dissemination of
information is still a protected right. What he chooses to do with that
information is his own business.

> Also, our colleagues append callsigns to their comments.
>(Of course, that immediately distances you from being a colleague.)

Never claimed to be one, Sir Jeffy. I was referring to Deegie, not to myself.

Try again, Professor.

You (and your wife) need to obtain an Amateur Radio license to use an
Amateur Radio.
You would have to study for and pass an examination in order to obtain an
Amateur Radio License..
There is no exam required for the Family Radio Service

Actually Motorola will sell its RSS software to anyone who wants
to buy it. Bought the programming software for my MCX-1000 mobile -
had to, no shop around here had the software, so they couldn't
program it. Now getting the software by illicit means, such as off
the net, pirating copies from friends, etc is by all means ILLEGAL.

The best bet is see a local motorola dealer, and see what they would
charge you to program the radio. Alternately you can contact Motorola
and inquire about the part numbers you need to purchase -- RSS, RIB,
and cables. I can assure you that Motorola thinks very highly of their
programming accessories, and prices them accordingly. In other words,
they are NOT inexpensive. To cut costs, it is possible to build your own
cables and RIB box. The info can be had *LEGALLY* from batlabs ---

http://vip.psychonet.net/~batlabs/

They have a nice listing of the various cable and software partnumbers
and contact info on Motorola for ordering them.

Good luck

Well CB Buttboy the only reason 3901 is so screwed up is because of you idiot stumpjumpers jamming it on a nightly basis. As for 3950 I would suggest you take that up with someone that operates there.

As for inability to understand how to follow a thought and a thread, I really have no advise for you except to just roll over and crawl back under your rock.

Have you tried it on a band other than 75/80? There is a fixed mica
loading cap connected from the output side of the bandswitch to ground.
Sometimes this cap open's up and makes the circuit non-resonate. This
could account for your inability to properly tune the pi-net output
stage. Check it on other bands, such as 20 or 40. See if the problem
is the same everywhere. If it works elsewhere, then the problem is
likely what I said.

>For several years I've been complaining to FCC, ARRL and anyone else who
>would listen, about the illegal operators local to me on 2 meters (and
>440).

Hi, Ted. Let's talk about this, because it should be of concern to licensed operators everywhere.

Were these individuals using call signs and pretending to be hams? Or was it like a few in the Raleigh area who bought some 2-Meter equipment and were using it as an intercom between cars? Also, were they on the repeater, or simplex?

Did they "behave" on the air, or were they causing interference? Did they talk to other stations, or just to their "buddies"? Was this in the Hot Springs, VA area itself, or over a wide geographical area?

Finally, how did you obtain the names/addresses/phone of these illegal operators? Did they give this information willingly over the air, or is the result of some "detective work" on your part to locate and identify them?

Paul K5PF

Laughing too hard to type......

OK, OK, I'm back.....

So which end of the resistor goes to the "hot" lead. I don't see a "plus" and "minus" sign on it.

I'm sorry. I'm laugh i n g a g a i n.......more later.

This HAM has a nice design that is simple and works very well.

Did you notice over the past few month's how I "DREW" her out? Poor ole
Mrs. OBrainless...could you imagine being married to a dumbell like her?
Can't wait to see her video. Did you happen to catch the show on 3901
late on Saturday night? Followed by another attempt at being human on
Sunday night by Chicken Dumb Butt? Guess they had to sell that "big"
amplifier to pay that desperate lawyer they hired. Can't wait till he
drop's them like a hot potato, about the time he check's out Dimbo's
"case". What a bunch of losers.

>
> Thanks.

Regular Motorola RSS will not likely program the radio below 450. You will likely get an error message saying the frequency is out of range.

The radio will go down in the 440 range - its the programming software that won't allow it. You might to search around for "special" software (not hacked - Motorola had some beta RSS out that allowed "out-of-band" programming).

Though I have never tried it, I hear that using the shift key while you entered the frequency in the software would allow it to work. 446.500 would appear as $$^.%)). But like I said - I have never tried it - someone said that would work on a lowband Maxtrac, but I've never had one of those.

There are commercially available loops, the only one that comes
to mind is the Kiwa loop, expensive but gets great reviews.
Most AMers build there own loops, so I'll give you a few pages
of info to get you started. Some of this info is for single turn loops,
most AMers use multiturn (8 to 16) loops

http://home.inforamp.net/~funk/
http://gallery.uunet.be/ON4CEQ/ant_en.htm
http://www.ambrosia.demon.co.uk/csl/mlmaths.htm
http://www2.wcoil.com/~gnbc/
http://www.geocities.com/Hollywood/5613/mwc.html

There is loads more of info, and the radio clubs have detailed
plans for building loops.

I didn't see Jim's post originally. The FCC has a secure web site. An investigator from the Federal A. Generals has contacted me and is working on the case on behalf of the fcc-- it is a genuine case of fraud. I don't know what world Jim lives in, but perhaps examination of facts is called for before shooting off his mouth. The only thing sleazy here, is some cracker who doesn't have a clue. Too bad we can't revoke his ability to make an ass of himself.

>can be done and you will get better with practice.
>I hope this helps.

I have several old receivers and do not understand that SSB could be so
difficult to receive. Problem with some old receivers are that BFO is
not strong enough compared to the ssb-IF signal to the detector. The BFO
should preferably be 5-10 times as strong as the SSB from the IF.
Cure is to decrease the IF signal and increase the BFO.

I have always heard that product detector is neccessary for ssb
receiption, but one of my receivers* has envelope detector. IF is
divided into two sections with 2x 6BA6 and 6AV6 detectors, the BFO does
not leak into the AGC. BFO was increased to 5V and IF is 1-2VRMS. I
listened to several strong German and British ssb stns on 80 and 40m ssb
in the evening, it works ufb quality - even with the AGC on and full RF
gain.

I am surprised to learn that 6AT6 or 6AV6 has so good quality for ssb,
and product detector seems not too important to add.
*)German "Lorenz 6P203" AM/CW coast stn receiver, built around 1960.

Sidney Me Sick An Opinion

Sidney Mahan is a lawbreaker and a criminal. Why must you jamm and jamm and jamm hours on end? I really feel that you need to be taken away to a mental home. Your vocabulary has much to be desired Moan, faggots, moan and East coats faggots all that in the deep Texas voice of yours. You like music like Anchors away and little noise makers that you use to jamm free speech on 3950. All that waste of a human being! You must feel good, Sid, jamming, cussing and tape playing for what? Controlling others free thoughts and saying that the Liberty Net are Nazis and so on. You, my dear Sid, are the Nazi, controlling others thoughts!

>Somebody knows how conect a Yaesu FT-51R to a PC

Buy the ADMS-1 package from Yaesu. The current version is ADMS-1D, which will program the FT-51, FT-50, (plus their single-band brethren), and VX-1. The package includes software plus a special cable that includes level shifters, etc.

Programming a FT-51 with this package is easy. Doing it without the package would mean replicating *both* the special cable and the software - not a simple task.

Dave

4122. Azden PCS-3000 locked up, help!

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-14 00:00:00 UTC
From: Jason Togyer <jtogyer.notforspam@westol.com>
Message-ID: <35FD8A45.4958@westol.com>
Source record: 161669
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment,rec.radio.amateur.misc

Help!

I bought a clean Azden PCS-3000 at a hamfest over the weekend. It worked fine at the show, but when I powered it up at home, the processor seemed to be locked up -- no RX or TX, and several odd characters on the display.

The sticker on the radio says, "if microcomputer malfunctions, see page 12 of manual to restore normal operation." But part of the reason for the terrific price on the radio was the lack of the owner's manual.

Various efforts at button-pushing combinations and ways of turning the radio on and off (with my nose, my toes, etc) haven't been successful. Anyone out there have a PCS-3000 or know how to reset one?

Also, the ham I bought it from retired it more than a year ago when he bought a new mobile, and the memory battery is dead. Is this why the radio locked up now?

Thanks in advance,

FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 14 SEPTEMBER AND FORECAST FOR 15 SEPTEMBER - 17 SEPTEMBER
STATUS INDICATORS SOL:GREEN MAG:** YELLOW ** ION: GREEN

1A. SOLAR SUMMARY
Activity 14 Sep: Low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number for 14 Sep: 122/75

GOES satellite data for 13 Sep
Daily Proton Fluence >1 MeV: 9.3E+04
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 3.40E+06 (normal)
X-ray background: B3.4
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
15 Sep 16 Sep 17 Sep
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 15 Sep: 120/72

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 14 Sep: Quiet

Estimated Indices 14 Sep : A K
Learmonth 3 2211 0111
Fredericksburg 5
Planetary 9

Observed Indices 13 Sep : A K
Fredericksburg 4
Planetary 6 3222 2212

2B. MAGNETIC FORECAST
Date Ap Conditions
15 Sep 10 Unsettled
16 Sep 17 Active
17 Sep 8 Quiet to unsettled
COMMENT: Recurrence suggests mild increase in activity can be

expected 16 September.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
14 Sep Fair Normal Normal
PCA Event : No Proton/PCA Event In progress

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
15 Sep Normal Normal Normal
16 Sep Normal Normal Normal
17 Sep Fair Fair-poor Fair-poor
COMMENT: Degraded HF conditions are expected on 17 Sep due to
possible recurrent geomagnetic disturbance on 16 Sep.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
14 Sep 79

Observed Australian Regional MUFs:
Darwin: Near predicted monthly values to 20% depressed.
Townsville, Hobart, Sydney and Christchurch: Near predicted monthly
values.

Predicted Monthly T index for September: 89

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
15 Sep 87 near predicted monthly values
16 Sep 80 near predicted monthly values
17 Sep 73 about 15% below predicted monthly values

Source record: 161788

I am glad to see that I haven't gotten flamed yet! :-) My questions are asked in the interest of curiosity, not controversy!
I am glad to hear that it is a state's rights law, not a Federal thing. I will have to take back my question about why the "Feds want to keep scanners out of cars". You've set me straight on that count.
And I can understand the fear of some local law agencies of the criminal element using scanners as a tool to fight the police.
But isn't a state banning the allowance of scanners in a car tatamount to judging a guy guilty before proving it? I guess this heads into a political/philosophical realm, so I will drop the thread here if you wish. I don't want to drive everyone crazy with off-topic stuff!
Thanks again!
Mike

You will have to do a whole bunch of work. The Pagewriter 2000 is
hardcoded to work with a ReFLEX50 or ReFLEX25 network. The Protocol
stack is hardcoded in masked microcontrollers. The RF transceiver
operates at 900 MHz, and will not translate down to 144 or 440 MHz
withoug extensive redesign. Have fun with the software developers kit,
there is a bunch of neat software that you can do on this.

All the hundreds or possibly thousands of O'Briens on these newsgroups
would have to file a class-action lawsuit, for no mention of a first
name was made.

Let's see - you need to be added to the ol' kill-file so I won't
ever again see any more of your posts. Stand by for a minute - I'll
be right back.

Oh NO!! Not the dreaded lawsuit monster again.

It's the same ol' crap every stinkin' time...someone gets
flamed...someone feels a lack of power and control in their
miserable lightweight life...soooo....

What do they do about it? Why, they wheel out the ol' lawsuit
threat. Well folks, the lawsuit threat is becoming just a little
threadbare. Can we give it a rest for awhile?

Remember lawyers don't swing into action unless they smell money,
and I'm not talking this nickle and dime stuff that we
participate in on this newsgroup. If we had the resources that
the legal beagles pursue, then we probably wouldn't be spending
our miserable little lives on the computer staring at inane
postings from [mostly] a bunch of jerks.

I Have A Standard C228 Dual Band HT (Heath HW24T) And I Am In Need Of A Schematic And Or A Parts List.
Part # Q202 On The Board Is Missing (Main Board Behind Key Pad) & The Traces Broken. Can Any One Help (Please)

The People At Standard Are Pure A-Holes. And Will Not Sell Me The Parts Or Give Me A Part Number Or Interchange Or Even Tell Me What Belongs There.
Also They Advised Me That It Would Cost To Much Money To Send It In For Repair..
What An Outfit. I Will Never Ever Consider Any Standard Product Again...

Yeah. It is almost as lame as that unilateral, unenforceable contract clause people try to put in their .signature blocks (you know, the ones that say 'if you send me unsolicited e-mail** I will bill you $500 through my collection agency').

Whenever I see one of them, I always ask the name of their collection agency, and how much they've made to date. Most choose to ignore my question. Gee, wonder why?

I remember KI6HR on Phoenix, AZ repeaters. He seemed to be a very good radio-
citizen and never raised *my* suspicions.

Several years before that there was a man with a South American call on some
of our repeaters. I even sold him an old Motorola 450 base radio.

I have a 6/7-month old Yaesu FT-900/CAT HF Transceiver, purchased brand new from the store, placed back in its original box, available for best offer.

It comes with a Bencher low-pass filter.

Please feel free to make any offer.

Thanks.

4139. QRP mobile, LONG PATH!

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-14 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <6tj2hvqhe1@w3eax.umd.edu>
Source record: 161803

I was flipping around 20m CW on the way into work (1130z today) and thought I heard "FR5..." It was weak. At 2.5w out, I threw my callsign out three times, and heard "NF2???" so I gave it a few more times.

I then confirmed the now strong signal as FR5DD, Jean, on Reunion Island. Instead of being in the noise, he was now S9+10db. I got a 539 and was happy to get it!

(it's east of Madagascar in the Indian Ocean, about 10,000 miles distant)

BUT...

He'd apparently been beaming toward Europe and couldn't hear the US too well because THAT path - the shorter one - wasn't too good. But the long path - 14,000 miles around - was solid!

14,000 miles on 2.5 watts from a mobile antenna on I-95. No altitude, no power, no problem! :)

Listen and ye shall be rewarded. I'm proud to say that he then proceeded to work a bunch more people on the east coast, and me and my pipsqueak signal had something to do with indicating that a path was available.

MORAL OF THE STORY: Many paths go unnoticed because nobody FINDS them. Once found, they may be traversed with relatively little effort. Go find them, because they are there!!!

I agree. I think the anti-scanner laws are bad laws. Unfortunately, the courts haven't seen fit to agree with my opinion on this, so we're stuck with them until we can convince the state legislatures to repeal them. Fortunately, my state is enlightened in this matter and doesn't restrict mobile use of scanners. But we have this pesky anti-headset law that outlaws use of communications headsets, even those covering only one ear. But they let people use cellphones, go figure.

>> restrictions on private ownership of radio receivers?

There are no restrictions on _ownership_of radios, dumbass. If you had been in
school instead of engaging in gang activities, you would have known that.
The only restrictions is revealing the contents of a message to a third party
not involved with the communications. Use of the information heard to commit a
crime. (something you would never do, huh Dimmy?) Use of info for personal
gain.
The ECPA of 1986 is mainly to insure privacy on cellular phones and
modification of receivers to hear them.
Nowhere else does the government limit what you can own, stupid.

>> Gee, not only are you a >> low-life

> I heard he is sweet on his mama.

I heard your alcoholic father regularly sodomized you, Dimmy.

> He lives with her at age 52!

What an ambiguous statement, Dimmy. Nobody can tell if you're saying my age is
52, or if I lived with her when she was 52. Let's examine this, shall we? I'll
be 43 later this month, so if you're saying I lived with her at age 52 , that
would be correct, since the year would have been 1969 and I was still in high
school. Something you could never do, huh, Dimmy?

>I'm coming mama!!!

A familiar expression for you, especially when your mama took a shower with you
up to the teenage years, huh, Dimmy?

4161. Announcing West Coast Triple CW Event

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-14 00:00:00 UTC
From: Casey Bahr <caseyX.bahrY@intel.com>
Message-ID: <35FD3808.7035@intel.com>
Source record: 161825

OM, XYLs, YLs, especially FISTS members,

Sorry for the "spam", but I'd like to tell you all about
an upcoming special CW/code event on Saturday, September 19th!
Seems that the September FISTS Keynote newsletter that contains
our full announcement is going to be too late for the event,
thus we're trying to spread the word as best we can by other means.

From 2000Z on the 19th until 0400Z on the 20th, three
FISTS-affiliated clubs, K7FFF, K6FFF, and WA7YYY are hosting
a special CW event on most bands, including Novice segments.
The name of the event is the West Coast Triple, named for the
callsigns, three club states (OR, CA, WA) and the points awarded.

For current and future FISTS members each club contact is worth
3 points towards FISTS awards (9 points total!) and if you work
all three clubs (any band) and submit an SASE you can receive
our special WCT Certficate, suitable for framing.

All the details can be found on the K7FFF website, specifically
at: http://www.imagina.com/webpages/casey/k7fff/FNW_WCT.html

We really hope to hear and work all of you who choose to participate!

Now back to your regularly scheduled newsgroup...

73,

Casey, KS7J, Trustee K7FFF, FISTS Northwest, #4400, CC# 457

4166. Re: Illegal users on 2 meters and 440

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-14 00:00:00 UTC
From: "Sickles, Matthew" <msickles@nortel.com>
Message-ID: <6tjjac$cdv@nrtphba6.bnr.ca>
Source record: 161830

This is an interesting discussion. We have had several illegal conversations on our local repeaters in Raleigh, NC as well. The local illegal people choose to sound off during weather emergencies which made it more than just an annoyance.

After I read your message I did what I always do when I make a new contact, I look up the call and see if the call matches the info that the person gave me. When I looked up KI6HR on the FCC and the QRZ database it got this information:

Callsign: KI6HR Rec#:386820 Type:I F:0000 Name: JOHN E SMITH
Addr1: C/O G MEEDER, PO BOX 4482 Addr2: STATELINE NV 89449
Country: USA Class: Extra Effective: 15 Nov 1988 Expires: 15 Nov 1998
Prev Call: N6JFF Zip Coords: 38.975 N 119.908 W Douglas County

It looks like he has followed all of the rules and has a valid call until Nov 15 of this year. So if I heard his call, looked it up and it verified what would be the problem in talking to John?

Its a shame if someone was wrongly shut out of the repeaters. They are just trying to actively participate in a hobby that they love. KI6HR seems to have an Extra class license, so he has also spent quite a lot of time studying and taking tests.

Now, maybe I am missing something here but I would like to know more. I see a section in your post that states that the whole VE session was under investigation, but why has the FCC not removed this persons call?

Did the FCC censure or remove John's privileges as an amateur?

Not trying to be a jerk, I am just interested in the situation.

73, de Matt

You claim "They have stated...". Please clarify.

Please cite Federal law or official statements of policy from the FCC.

I'll cite FCC part 97:

S 97.403 Safety of life and protection of property.
No provision of these rules prevents the use by an amateur station of
any means of radiocommunication at its disposal to provide essential
communication needs in connection with the immediate safety of human life
and immediate protection of property when normal communication systems are
not available.

4169. broadcast band antenna

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-14 00:00:00 UTC
From: "Bruce E. Corbett" <bcorbett@lucent.com>
Message-ID: <35FD62B6.33D421A0@lucent.com>
Source record: 161833
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.antenna,rec.radio.amateur.misc

Some years ago, actually about 25, I saw a tunable indoor broadcast band antenna that I would like to build today. Basically, it was a cross of wood, with holes drilled along the lengths. Wire was threaded through the holes forming a diamond shaped coil/antenna. At the base of the antenna was a 360pf var cap to tune the antenna. The antenna was quite directional (actually bi-directional). Does anyone know where I might find plans for this beast?

Thanks in advance,
Bruce

Actually he is apparantly the result of a cloneing test gone awry. I
heard it from reliable sources that he is the by product of a clone
of a African monkey. The janitor was cleaning up and inadvertanly
contaminated the experiment with some stumpenrump he had on his shoe.

Actually he is just a frustrated, soon to be old man. He see's his
life as a total failure, a total loss. He is lashing out at everyone
he can. He spent 14 year's in the Navy. Got busted for dealing drugs.
Goes to prison, loses his military career. Then in a drunken, drug
induced stuper marries up with the vidio queen of Georgia. Give him
a break Roger....LOL.

4174. IC-228H - extended receive?

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-14 00:00:00 UTC
From: vyper@writeme.com
Message-ID: <6thp40$dh5$1@nnrp1.dejanews.com>
Source record: 161870

I just aquired a used Icom IC-228H 2m mobile radio. I'm lucky that it still had the manual. The point of my post is this: Is there a code that I can use to enable extended receive (looking for aircraft freqs, specifically)? I found a similar code 4 years ago when I got my IC-T21A hand-held. This isn't critical, and the radio only cost me a few hours of assistance to someone, so I got a good deal no matter what. You can respond here or at vyper@writeme.com.

Thanks in advance!

Yeah, Yeah. Yeah. This gets SO old, So FAST!

Once more time, boys, real slowly so you'll get it:

1. The original poster did not say he was a ham. Where'd you get that idea?

2. The HTX rig in question is marketed as Ham Band Only. No MARS/CAP modifications available. The Distributor says this is so it will have better-than-average intermod rejection. It is true that the base-design radio can be modified using the keyboard and function key. The manufacturer suppressed that capability on the HTX series (2 Meter/440) at the request of the distributor (Radio Shack). Or so they say. Many have tried to do a Mod without success, so that may be true.

3. Helping Amateurs and prospective licensees is a big part of ham radio. This request hardly falls into that category. Why risk losing your license by cranking out non-type accepted equipment for the public? Got a legit question or need? Bring it before the group. You will get plenty of help.

Hello again, Burt. Did you finally decide to empty that trash can beside your computer? Paper must have been piling up since last Fall, because here you go again with an old post. Was this on the bottom of the pile, and you decided to run it by everyone again to get a reaction?

Yeah, there are a lot of new kids on the block. But enough of us have been around long enough to recognize when you "recycle" postings.

As when you published this originally, you have sidestepped the request to identify the "former high level employee." You're right, Burt. We can't "guess" who it is. So why don't you print the individual's name right here in the newsgroup?

Meanwhile, let's recycle some more of your previous postings.......There's a good one.....at the bottom of the can, with a HoneyBun wrapper stuck to it. Can we see that one again, please?

Source record: 161875

Those are certainly good reasons for amateurs to be allowed to have "scanners" in their cars. I have no gripe with hams being able to do this.
I am merely wondering why it is so bad for NON hams to have them,and not the 2m xcvrs, but the ones MOST scanner enthusiasts own and use, the receive-only type?
As far as I have seen, there IS no law regarding the illegality of VHF/UHF xcvrs in cars, other than the technicality (valid tho' it is) of having to have a license to actually transmit on said radios.
And I will make the point that although the type of rig you mention CAN BE considered a scanner, you must at least see the practical reality that this law targets the more common (by far) rx -only, multi-band types.
I have no argument with you per se, but it's just that I haven't been able to find the background paperwork on this issue, so I am very curious.
Hams certainly provide an excellent service for the communities in which they operate, and so too, I would add, have a lot of non-amateur scanner hobbyists who have tracked the getaway of a thief, a drug-deal, etc. and notified police.
Why did the Feds want scanners out of cars in the first place? (And I know I've opened a can of worms here!)
Thanks for bearing with me, Jeff. I appreciate the well-thought out and intelligent reply!
Mike

>I am merely wondering why it is so bad for NON hams to have them

Possession of a scanner in a car is considered similar to possession
of burglar tools under some state laws (it isn't a federal law). Police
don't want you to have a scanner because you may be using it to keep
track of the police, either to evade them or to show up at a crime scene
and get in the way. So police agencies have lobbyed their state legislatures
to forbid scanners in cars (and in some states forbid handheld scanners
used outside the home too).

I sympathize with you, but remember, most of the articles you see in the single daily email digest you receive are submitted via the rec.radio.amateur.misc newsgroup. The person posting the binary messages knows he shouldn't post such things to a discussion group, but it's impossible to reason with him. I suggest you unsubscribe from the ucsd.edu NG-to-email reflector, and instead read the NG as most the rest of us do ("Netnews" or "usenet"). Then you can delete the individual articles you're not interested in reading.

For everyone else, you can read rec.radio.amateur.misc via email - you'll receive a HUGE single email containing all the day's articles, including O'Brien's binaries. You won't be able to skip individual articles - rather you'll just have to scroll down through them to the next article. To subscribe, send an email to listserv@ucsd.edu and only write: subscribe info-hams and you'll be hooked up. (All the rec.radio groups can be received via email except rec.radio.swap.)

>him. I haven't heard CHU disagree with WWV or WWVH yet!

Out here in the Central Pacific, over a dozen time standard stations
can be copied on 10 and 15 MHz in the evening (WWVH, JJN in Japan,
XSU [?] in China, Korea, a couple out of S. America, and others from
who knows where). Either due to unsynchronization or possibly propagation
or distance considerations, the top of each minute sounds like a machine
gun firing - pretty funny!

We had a similar problem here. The bootlegger used the call sign KI6HR, called himself "John," and affected an English/Australian accent. He was active on the repeaters,and we had quite a time getting shut of him. Despite personal contacts with his circle of friends with evidence of his illegal status, many continued to chat with him. Not surprising that this group included a group licensed during a VE session that later fell under suspicion, although no calls were vacated, or retests ordered. Finally, enough folks were persuaded to stop talking with him, and he fell out of sight.

Beware if you find KI6HR on your repeater!

You've got the basic design already. The width of one of the sides
can be from 2 to 4 feet, with the number of loop turns being anywhere
from 7 to 12, depending on the length of the side. Connect that coil
to the capacitor. On the inside of the loop, run a single turn of
shielded cable. On one end of the cable, connect the braid to the
center. Connect that to the receiver's ground. On the other end of
the cable, run just the center conductor to the antenna terminal. The
loop should be slightly more directional toward the end that is not
connected to the braid. Play around with the number of loop turns
until you can cover the entire band.

What you've got is an "X" shaped loop, a spiral loop. My favorite was
a box loop, where I built an "H"shape, with small cross pieces on each
end of the "H" and wire run in a loop around the outside. Imagine
winding wire around the outside of a box. In fact, you could do that,
too. I find the box design to be better than the spiral loop, though
it takes up more room.

Please cite federal law or official FCC policy that "Radios capable of
transmitting on police frequencies don't fall under the catagory of
"amateur station."

Even if your definition is correct, you are allowed to use
"any means of radiocommunication at its disposal." (S 97.403 quoted
fully below) There is no requirement that the equipment be part of the
"amateur station". If you know of such a requirement, please cite a
reference from federal law or official FCC policy.

Trying to gear up an ft-101e. Original power cord with Jones plug is
missing. Would appreciate a pinout diagram for both 117 vac and 12 vdc
configurations on the Jones plug end of the cord.
Thanks. Scott VE1AFN .>>>

>to be. Give it up, old man.

Sheyeah, right! I'll be 43 later this month, not 52, as your butt-buddy O'Braindead alledges. And try to get some new material, I know that's difficult, given your mentally-challenged state, and quit using my flames back on me. It's really lame. Why don't you get in that sagging, rust-bucket of a vehicle you make payments on and come find out what kind of shape I'm in, pussy.

Actually he is apparantly the result of a cloneing test gone awry. I
heard it from reliable sources that he is the by product of a clone
of a African monkey. The janitor was cleaning up and inadvertanly
contaminated the experiment with some stumpenrump he had on his shoe.

Actually he is just a frustrated, soon to be old man. He see's his
life as a total failure, a total loss. He is lashing out at everyone
he can. He spent 14 year's in the Navy. Got busted for dealing drugs.
Goes to prison, loses his military career. Then in a drunken, drug
induced stuper marries up with the vidio queen of Georgia. Give him
a break Roger....LOL.

There are no restrictions on _ownership_of radios, dumbass. If you had been in
school instead of engaging in gang activities, you would have known that.
The only restrictions is revealing the contents of a message to a third party
not involved with the communications. Use of the information heard to commit a
crime. (something you would never do, huh Dimmy?) Use of info for personal
gain.
The ECPA of 1986 is mainly to insure privacy on cellular phones and
modification of receivers to hear them.
Nowhere else does the government limit what you can own, stupid.

>> Gee, not only are you a >> low-life

I heard your alcoholic father regularly sodomized you, Dimmy.

> He lives with her at age 52!

What an ambiguous statement, Dimmy. Nobody can tell if you're saying my age is 52, or if I lived with her when she was 52. Let's examine this, shall we? I'll be 43 later this month, so if you're saying I lived with her at age 52 , that would be correct, since the year would have been 1969 and I was still in high school. Something you could never do, huh, Dimmy?

>I'm coming mama!!!

A familiar expression for you, especially when your mama took a shower with you up to the teenage years, huh, Dimmy?

From: "Sickles, Matthew" <msickles@nortel.com>
Subject: Illegal users on 2 meters and 440

This is an interesting discussion. We have had several illegal conversations on our local repeaters in Raleigh, NC as well. The local illegal people choose to sound off during weather emergencies which made it more than just an annoyance.

After I read your message I did what I always do when I make a new contact, I look up the call and see if the call matches the info that the person gave me. When I looked up KI6HR on the FCC and the QRZ database it got this information:

Callsign: KI6HR Rec#:386820 Type:I F:0000 Name: JOHN E SMITH
Addr1: C/O G MEEDER, PO BOX 4482 Addr2: STATELINE NV 89449
Country: USA Class: Extra Effective: 15 Nov 1988 Expires: 15 Nov
1998
Prev Call: N6JFF Zip Coords: 38.975 N 119.908 W Douglas County

It looks like he has followed all of the rules and has a valid call until
Nov 15 of this year. So if I heard his call, looked it up and it verified
what would be the problem in talking to John?

Its a shame if someone was wrongly shut out of the repeaters. They are just
trying to actively participate in a hobby that they love. KI6HR seems to
have an Extra class license, so he has also spent quite a lot of time
studying and taking tests.

Now, maybe I am missing something here but I would like to know more. I see
a section in your post that states that the whole VE session was under
investigation, but why has the FCC not removed this persons call?

Did the FCC censure or remove John's privileges as an amateur?

Not trying to be a jerk, I am just interested in the situation.

From: ham@w3eax.umd.edu (Scott Rosenfeld [NF3I])
Subject: QRP mobile, LONG PATH!

I was flipping around 20m CW on the way into work (1130z today) and
thought I heard "FR5..." It was weak. At 2.5w out, I threw my callsign
out three times, and heard "NF2???" so I gave it a few more times.

I then confirmed the now strong signal as FR5DD, Jean, on Reunion Island.
Instead of being in the noise, he was now S9+10db. I got a 539 and was
happy to get it!

(it's east of Madagascar in the Indian Ocean, about 10,000 miles distant)

BUT...

He'd apparently been beaming toward Europe and couldn't hear the US too
well because THAT path - the shorter one - wasn't too good. But the long
path - 14,000 miles around - was solid!

14,000 miles on 2.5 watts from a mobile antenna on I-95. No altitude, no
power, no problem! :)

Listen and ye shall be rewarded. I'm proud to say that he then proceeded
to work a bunch more people on the east coast, and me and my pipsqueak
signal had something to do with indicating that a path was available.

MORAL OF THE STORY: Many paths go unnoticed because nobody FINDS them.
Once found, they may be traversed with relatively little effort. Go find
them, because they are there!!!

I suspect the answer would be yes, as he was 10 over S9 here, and
I was still S3 on a quiet band, BUT when I called at first with
the other station pointing the wrong way, there's a chance I
might not have gotten through.

Message-ID: <35FE06E3.4065@pl.jaring.my>
Source record: 161739

Hi. I'm quite new to this CB Radio thing. I have browsed through several web sites and got a bit of information about CB Radios.

I would like to make my own CB Radio so that I can communicate with my friend who stays about 3 Kilometers from here. Does anyone have any ideas of suggestions? I know how to make a CB Receiver with just a few components and I'm sure a tranceiver can be made that way too.

If anyone can give me information on how to build my own CB Radio or links to web sites that shows how, I would really appreciate it.

Thanks in advanced.
Brian. :)

>

Hey Scott,

Got two of them sitting here dead on the bench. According to my print
here you go.

P9 wireing for AC operation
Pin's 2 and 4 are for the AC line cord input.
Jumpers on 9 > 11 and 1 > 8.

P9 wireing for DC operation
Red (+12v) to pin 2
Black to pin 10
Jumpers as follows:

Pin 10 > 7.
Pin 5 > 12.
Pin 5 > 6 .
Pin 1 > 3.
Pin 3 > 11.

Fuse for 12v is 20A. Good luck and have fun.

Summary: Buy Sell SWAP Ham Radio Electronics Computers 9AM - 2PM

This coming Sunday...

*** !!!! In our Traditional GARAGE and lot !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday September 20th 1998
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

4222. I have to apologize

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-15 00:00:00 UTC
From: cbrambo@aol.com
Message-ID: <6tlvc8$3lc@dolphin.cannet.com>
Source record: 161751

There's a reason for acting the way I do on this newsgroup. I think it's time I gave an explanation.

You see, when I was Freshman in college, I often wondered what it would be like to "do it" with a large, black woman. I just wanted to do it one time, but it got me into a lot of trouble, and I've been regretting it ever since.

I met her at a summer job I had. I knew I had to have her

I asked her out, and she accepted. After going out a few times, she figured out what I wanted. She said that she wanted to make it "special" for the both of us.

She that there was a fancy new restaurant in town that she wanted to go to, and that I should wear by best suit Saturday night. I was to meet her at her apartment. When Saturday came, I drove to her apartment and was met at the door. She was wearing a beautiful white dress that contrasted nicely with her dark chocolate skin. She said that we would drive in her car, and it would be her treat. I know that I couldn't wait for dessert.

But to my horror, we didn't go to a restaurant! We went to a church where all of her family and close friends were waiting! She told me that she couldn't make love to a man that she wasn't married to, and that I was the only man for her!

That was seven years and six children ago. The woman has got me under her spell and cannot be sated. My only outlet in life is to make fun of ham radio operators and engage in petty fights and threats of lawsuits. I hope you can understand my situation, and won't ever find yourself in the same predicament as I. I make fun of VietNam Dan because I'm pretty much in the same situation, being a leach off of the taxpayers.

But in a way, it's a blessing. Throwing away a college education to become a white trash stud monkey is great. Now I can be just like my buddies on 75 meters.

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

4223. Ham Radio Stores in MI, OH and IL

Hi,

I will be travelling to the USA in a couple of days and was thinking of buying a Cushcraft Log Periodic there, since I expect prices to be considerably lower than in Europe. So far, Ham Radio Outlet in CA and VA turned out to be great stores with great people running it, but upon checking, I found that none of the other stores is close to the places I will be travelling to (Detroit, Ann Arbor, Cleveland and Chicago). Can anyone recommend a good location with a well selcted stock of Cushcraft anntennas?

BTW, is there an alternative product to the SkyLog by another manufacturer? Any recommendations? I need a not too large and heavy antenna to cover the 5 bands from 20 to 10 Meters, not necessarily a LogPeriodic.

TIA,

Peter Lemken

Today the U.S government announced that they misinformed us about it being
a ballistic missile, it was a satellite launch attempt after all.
The previously undisclosed third stage may have malfunctioned and
the satellite apparently didn't reach orbit, unfortunately.

Whether 75 meters or 11 meters, I'm sure that many would find it more
interesting to listen to that satellite than the regular program material.
I had thought that the code luddites would appreciate the attempt to
convert the inhabitants of 27 Mhz by example.

S 97.111 Authorized transmissions.
(a) An amateur station may transmit the following types of two-way
communications:

...

(2) Transmissions necessary to exchange messages with a station in
another FCC-regulated service while providing emergency communications;

...

S 97.111 authorizes transmissions. It does not restrict the frequency
in this authorization.

Other provisions of Part 97 restrict the frequency you may use in normal
situations. These provisions do not matter in a "97.403" (covered by
97.403 "Safety of life and protection of property") situation. (97.403
is quoted above).

i.e. (in simpler terms)

In the right emergency situation,

1) S97.111 (a)(2) authorizes transmissions. Frequency is not restricted
in this provision of the rules.

2) S97.403 means that "No provision of these rules prevents" you from
using any frequency in an appropriate emergency situation.

3) Other provisions of Part 97 restrict your choice of frequency under
normal conditions, but don't apply if S97.403 (or S97.405) does.

Whether or not you'll lose a court case is another thing entirely.
Money and connections with big brother often talk louder than the law.

The "safest" choise is to not make any emergency transmissions on
non-ham frequencies unless the emergency is serious enough that you'd do
it even if you knew you'd be convicted of illegal transmissions.

Very interesting thoughts, Mike, and congratulations on your code improvement.

Regarding special event stations not working the Novice segments, I can think of a few possible reasons: First, there is the power limitation in the Novice segments. Second, 10, 15, and 80 meters aren't the best bands propagation wise. Third, the Novice portion of 40 meters is only available in ITU region 2, and practically unusable after dark. Regardless, I don't think that any of the special event stations are malicious. We frequently hear the following 2 complaints: why don't they work more of the CW bands; why don't they work more of the phone bands. Seems you can never please everyone. Why not volunteer for your club's next special event, and work the Novice bands?

I frequently work the Novice bands myself. Hope to catch you on CW!

Mike, AA3RL

Hi !

I'm a student (Free University of Brussels) doing a work on a GPS based
frequency reference.

Living in Belgium, I cannot get the QST article :

"A GPS-Based Frequency Standard", QST Magazine,
July 1998, pp. 37-44.

I would do ANYTHING to get it ! (I already try in vain to get it on QST
website) . Anyone's got an idea ??? (maybe making a copy of it and send it
to me by mail or scan it, and send it by email ?) . Of course I would
reimburse all the costs !

Thanks

Patrick

Look up the definitions of "amateur station" and "amateur service."
Then look at the frequency tables available to the "amateur service."
(It takes a little detective work, but you'll eventually come to the
correct conclusion.)

>Even if your definition is correct, you are allowed to use
>"any means of radiocommunication at its disposal." (S 97.403 quoted
>fully below) There is no requirement that the equipment be part of the
>"amateur station". If you know of such a requirement, please cite a

The "its" you reference above refers to "amateur station" - no fair
taking it out of context: "... an amateur station ... at its disposal."
Just what equipment would be at the disposal of an *amateur station*?

HEY,

I just got my novice license and have been loving every minute
of it. The only problem wiht taht is that i've been having to use my
firend's radio because i lack one of my own. My question is where can
i get a quality radio for a reasonable price. If possible... a radio
that can tranceive on as many frequencies as possible because of the
fact that i plan on upgrading my license very soon (couple months).
So if anyone could help me wiht this little problem I'd gratly
appreciate it. thanks

For ham stores, there is Texas Towers. In San Antonio, there was a ham store called Kennedy Electronics, on the NW side of the outer loop. Houston has a couple of CB stores (Andy Electronics comes to mind.) These often have antenna and power supply stuff.

I have looked at the definitions. I have come to the conclusion that
you are wrong. Please feel free to provide references to convince
me otherwise. Simply stating that you have made some logical
inferrences does not constitute proof.

I see nothing in part 97 forbidding possession of equipment capable of
transmitters capable of transmitting of outside ham bands. If you see
any such prohibitions, please cite them. You are claiming that part 97
forbids hams to possess equipment that can transmit outside of ham
bands. Would you contend that a ham can't own a CB radio, a family
service radio, licensed radios for other services, etc.?

As far as I know, there is no prohibition, even on non-hams, of owning
equipment capable of transmitting on any frequency, but there are
restrictions on transmitting. (There are some restrictions
on "external RF power amplifiers".) Perhaps you know of some such
restrictions and can cite federal law or official FCC policy. I would.
be interested in any such information.

Q. Just what equipment would be at the disposal of an *amateur station*?

A. Anything you own, or can borrow, build, modify, etc. at the time of
the emergency. Disposal clearly means anything the operator can make
use of at the time.

Using a FCC non type accepted transmitter is illegal on Citizen Band Radio.
You seem interested in electronic's. Please note this group is called
rec.radio.amateur.misc not rec.radio cb.misc

May I suggest you work towards getting your amateur license, then you
can build and use whatever you want on the air, and not worry about
breaking type acceptance laws. A ham radio can be built from a small
kit and work the world on less than 1 watt.

>or distance considerations, the top of each minute sounds like a machine
>gun firing - pretty funny!

Isn't another part of the problem that the stations also use different tones and different tone lengths in addition to propagation and distance effects. Using two separate receivers tuned to CHU and WWV respectively, the two seem syncronous to me most days although frankly who really knows. When I was really ambitious and played with scopes the same technique produced a beginning of the notes that looked pretty close then too, if I used two of the same receiver type, but there appeared to be differences in how the chains from antennas to audio functioned even with supposedly identical rigs. On the other hand setting time by hand always has inaccuracies, but if gets to be more than one half second, it's time to give up and buy one of the clocks set by one of the time signal stations. Don't know if they work where you are, but here on the mainland, they're wonderful when they work.

4250. New radiofun frequency

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-15 00:00:00 UTC
From: kETTLE dRUM <umbe222@bellsouth.com>
Message-ID: <01bde104$d58c4360$LocalHost@fov67jfeerrr>
Source record: 161779
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.shortwave

Had a baaad case of the insomnia a few days ago. What to do? Goto the radio shop and look for some radiofun of course! Problem: It's 3AM and who in his right mind is up on ham radio at this time?? The usual radiofun frequencies of 3901 3894.5 and 3950 are justy dead right now and the participants are either fast asleep drooling on their pillows or at the local bar juicing it up in preparation for the dawn chorus on 14300 or 14313 in a few houers. Be sure to stop at the dough-nut shop on the way home guys!

So I start tuning and here comes this unearthly din thru my speaker! What the frig? It's 3:10 AM in the morning, and I'm hearing what has to be the King of all Drunken Stumblebums, cussing up a blue streak that would make a truck drivers ears turn purple. He's ranting on an on an on. "M-F this, Kiss my A.. you M-F'er Queer, Jibber-Jabber Jibber-Jabber you F-'ing Queer etc etc" This guy went on and on for an hour talking either to himself or some others who seemed to be enjoyung the whose show. So was I - grin. Then comes the music, noisemakers and what else, and off goes Mr Drunk to the races again with another beer-breathed barrage. It was still going on at 5:00 AM the show that is :)

Since then I've tuned in ths fun spot on the ham radio dials with the trusty Sony 2010 and Kenwad R-5000 and found this frequency to be most entertaining. So, if your up late at night and want some intellectual digress, humorous innuendo, pearls of wisdom mixed with a good ole time with some good ole boys down southland, check out 3853.1 LowerSideband. The usual group in there discuss some inteesting topics, but when James from Texax (Mr. Potty-mouth Beer-breath) checks in get ready for a wild ride till the cows get up for their morning milking.

Come 2 think of it, I really should hook up that baby monitor next to the Kenwad so I can listen in around the milkshead. Mabey the cows will like it you think??

SB QST @ ARL $ARLB072
ARLB072 League says 75 MHz too much for DSRC

ZCZC AG72
QST de W1AW
ARRL Bulletin 72 ARLB072
From ARRL Headquarters
Newington CT September 17, 1998
To all radio amateurs

SB QST ARL ARLB072
ARLB072 League says 75 MHz too much for DSRC

The ARRL says the FCC is proposing too much spectrum at 5.9 GHz for deployment of Dedicated Short Range Communications (DSRC) systems for intelligent transportation system (ITS) applications. The League's comments follow a June 11 Notice of Proposed Rulemaking (ET Docket No 98-95) in which the FCC proposed setting aside 75 MHz--5.850 to 5.925 GHz for use by ITS on a coprimary basis. The Amateur Service has a secondary allocation at 5.650 to 5.925 GHz, sharing with government radars and nongovernment fixed satellite service uplinks.

The League suggested that if the FCC goes ahead with a 75 MHz allocation, it should compensate by elevating remaining Amateur and Amateur Satellite allocations at 5.650 to 5.725 and 5.825 to 5.850 GHz to nongovernment primary ''to insure against future preemption by nongovernment services with higher allocation status.''

The ARRL said it's not apparent from the FCC's NPRM that 75 MHz of spectrum is necessary. The DSRC allocation at 5 GHz in Europe is only 10 MHz wide, the League pointed out, and the FCC Notice does not account for the disparity ''between that bandwidth and the claimed need for 75 MHz for unspecified future DSRC applications.'' The League said the Commission ought to explore the opportunities of frequency reuse and the availability of the 902-928 MHz band for some DSRC functions.

In earlier comments, the League questioned whether the 5.9 GHz band was appropriate for DSRC and urged the FCC to look into frequencies above 40 GHz, where DSRC systems could avoid interference from other users.

The League also recommended that the Commission mandate prior coordination between ITS America (a nonprofit ITS promotional

organization) and the League or restrict DSRC facilities to those using ''listen-before-transmit protocols and frequency-agile transmitters with roaming channel selection.''

Possible ITS applications include various highway safety systems, including traffic control, automated roadside safety inspections, enroute driver information systems, and systems where DSRC-equipped vehicles could be equipped to more quickly detect traffic congestion and dispatch emergency personnel or take other actions.

ITS DSRC transmissions would be ''narrowly focused and rapidly dissipating signals,'' according to ITS America. The FCC has proposed a maximum of 30 W EIRP for DSRC systems.

A complete copy of the League's comments is on the ARRLWeb at http://www.arrl.org/announce/RM-9096-cmt.html

Sorry, Vietnam Dan. You need to brush up on your Internet address extensions. The original post did NOT come from a domain within the United States. He don't need no steeenkin' FCC.

> May I suggest you work towards getting your amateur license, then you
> can build and use whatever you want on the air, and not worry about
> breaking type acceptance laws. A ham radio can be built from a small
> kit and work the world on less than 1 watt.

Why do you insist on forcing amateur radio down his throat, Vietnam Dan? This is the typical, arrogant, "get a ham license" response. One reason why interest in amateur radio among potential users is at such a low level today.

"Where's that big 'ol CB RAMBO??"

4263. 220 lumped element duplexer?

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-16 00:00:00 UTC
From: drranu@holly.ColoState.EDU
Message-ID: <6tn33u$98nq@yuma.ACNS.ColoState.EDU>
Source record: 161688

Hello,
I want to build a duplexer for the 220 band that does not use
cavities, as in made from lumped elements. I thought the ARRL
Handbook had specific info regarding this, but maybe I don't
have the right edition. Can anyone point me where I can look?

You'd figure with the duplexer's proliferation in celluar, PCS
and cordless phones there would be ample documentation on it.
Even classic engineering books don't make reference to it.

Thanks.

Easy way to determine frequency/meter relationship is as follows:

300 divided by Frequency in MHz.

I.E. 300/7mc = 42.857 meters.
300/28mc = 10.714 meters.

>bands. Would you contend that a ham can't own a CB radio, a family
>service radio, licensed radios for other services, etc.?

I made no claim at all. I said nothing about the illegality of possession
of any transmitting equipment. This thread (and almost all of Part 97)
concerns the *act* of transmitting, and my comments were to make you
consider the definition of "amateur station" and what equipment would
be at the disposal of an "amateur station" (as defined by the FCC) in
carrying out that act.

I have a VHF-FM marine band transceiver in my shack. Is that part of
my "amateur station" (as defined by the FCC)? Absolutely not.
S97.403 mentions equipment at the disposal of an "amateur station."

I also have an HT designed for service between 150.000 and 159.995
MHz in my shack. Is that part of my "amateur station" (as defined by
the FCC)? Again, no. Therefore, it is not at the disposal of my
"amateur station."

>As far as I know, there is no prohibition, even on non-hams, of owning

>restrictions on transmitting. (There are some restrictions
>on "external RF power amplifiers".) Perhaps you know of some such
>restrictions and can cite federal law or official FCC policy. I would.
>be interested in any such information.

Not sure what you're smoking but stop it. It's making you grossly
misinterpret my comments.

>>Q. Just what equipment would be at the disposal of an "amateur station"?

>A. Anything you own, or can borrow, build, modify, etc. at the time of
>the emergency. Disposal clearly means anything the operator can make
>use of at the time.

And here is where you are in error. Out-of-band transmitting equipment
is not included in the FCC's definition of "amateur station." Sure, it's
in your shack - you're free to possess it, but it's outside the realm of
"amateur station."

> You seem interested in electronics.

Ah, but here's a twist! Back in 1965, I assembled a Heathkit GW-42 CB transceiver from a kit. The tune-up instructions were included in the assembly manual. Now, building a kit can be considered "homebrewing" (except that the components are provided for you); you begin with an empty chassis and you solder each and every component, and thread each and every screw. After it was finished, I applied the "type acceptance" sticker (supplied by Heath) to the rear of the radio, as directed by the manual.

Apparently, it's enough that the design and prototype pass the FCC's acceptance standards.

Oh, note that the original poster is outside the U.S., Dan.

Ah yes, we do this every Armed Forces Day. Hams transmit on specific amateur frequencies, and listen on specified military frequencies; military stations listen to the frequencies the hams are transmitting on, and transmit on the military frequencies the hams are monitoring (sort of a "cross band" operation). Exchanges are made in this way. The military sends out very nice QSL cards! (Note that the military is not an FCC-regulated service.)

What S97.111(a)(2) allows us to do is transmit on an amateur freq'y, and listen to say, a police freq'y; the policy dispatcher would transmit and receive in just the opposite manner. Hence, we would "exchange messages with a station in another FCC-regulated service" without transmitting out-of-band.

I would strongly advise those hypothetical high school students to
BURN that "sheet of paper describing morse code"! You CANNOT learn
code from a sheet of paper. I tried that when I was in junior high,
using books I found at the library. I didn't know any hams back then,
all I had was the ARRL handbook and a few others. To this day I still
see dots and dashes flying by my eyes when I try to copy code. Maybe if
somebody had taught me code properly when I was 12 years old I would
have some skill and might love it as much as the pro-coders do. All I
know is that if you find a radio book with a morse code chart, you
should tear out that page and BURN IT!

I wasn't trying to encourage anyone from deliberately transmitting spurs,
and I certainly would encourage testing for spectral purity by whatever means is available, but I thought the original posting was a bit too negative, implying that anyone who can't afford expensive test equipment had better not dare to put a homemade transmitter on the air for fear of being fined out of house and home and being sent to Levenworth. Even when
the FCC was on the enforcement ball, they rarely if ever fined anyone for unintentional rules violations, they just sent you a notice in the mail with instructions to write back to them and tell them what steps you have taken to solve the problem.

Are you saying, "if you don't learn code by age 12, you'll never
learn it?" Code is an aural medium, so it learning it in the total
absence of actually being able to copy it by ear would be difficult,
although people have done it, just that it probably would take much
longer. I first learned code at the ripe-old age of 25, 5 WPM was
pretty easy, 13 and 20 WPM took a bit more time, but I stand firm
in my opinion that ANYONE can learn to copy code well enough to pass
ANY of the 3 code test elements. You say those "dot and dashes" go
wizzing by you, believe me they do that EVERYONE during the learning
process. The important thing is that if they are wizzing on by, TRY
to copy it and don't let the wizzing the bother you. If you keep at
it, eventually you'll start picking out the shorter characters and
if you stick to it, the longer characters will eventually come and
if you hang in there, you'll get clear copy.
The people who whine and crybaby about code these days are those
who are are either too impatient or lazy to "stay the course" and
commit seriously to learning it. Get a 20 WPM code tape that has
nothing but 5 letter cypher groups on it, sure it will sound like
gibberish or a bunch of chickens doing a break dance, but if you keep
at it on a daily basis, you WILL start to copy it and eventually you'll
get good copy on it, it might take 6 months, a year, or even more,
some people pick it up faster than others. The main thing is to stick
with it and don't let a lousy day get you down, the human learning
process is neither predictable or linear. Bottom line, get serious
about learning it, and you WILL learn it!
I'm not a FISTer, nor do I consider myself a pro-coder. I'm not
adverse to the code requirements being revisited as part of any

restructuring process. But, I take exception to these people who moan and groan about the current code requirements and wait for the code requirements to come back to them rather than getting with the program and moving forward to meet the code requirements as they are currently constituted. Sometimes I wonder if the people who moan and groan about code diverted their efforts into acutally taking the time to LEARN it, they would have their 20 WPM credit in spades!!

Beware that the pin numbers on the plug will not match if you change vendors. There was a post in the Fox Tango Newsletters to this effect. The CJ and AMP connectors have the same pin configuration, but the pin numbers are different.

Ensure that your wiring matches the pin numbers on the FT-101 chassis, and NOT what is on the connector.

Also, if you get a connector without the metal wings, it is possible to mis-connect the plug with disasterous results.

Just a warning from my reading the 14 years of Fox Tango Newsletters.

Al, NW2M
Keeper of the FT-101 web page.

I would definitely not try to ask a man with his WIFE to try CB. With
the state of things on CB these days once she keys up they would not be
able to communicate with all the guys out there calling for "radio checks
and so forth.

CB is definitely not a service to use for wholesome family communications
these days, unless you live in a very small town or in the country.

And I stand firm in my opinion that ANYONE can learn to dunk a basketball just like me and Shack. What a ridiculous thing to say. You are stating an opinion about people you have never meet who are, by nature, less gifted than you. What a nice guy. Do you also think people in wheelchairs could walk like you if they really tried?

I have a friend with a EE degree who experiences missing ticks of time in the verbal centers of his brain. How the hell does one copy Morse code when one's verbal centers are out of commission every few seconds? He managed to fill in the blanks at 5wpm but 13wpm is impossible for him and his doctor agrees. The doctor is a trained medical person who has examined him. I assume you are not a trained medical person and you sure as hell haven't examined him. Who are we to believe?

Generally, one only needs one antenna per band, not one per frequency.

> Is this crazy or do most people have multi band antenna.

Most hams who have dual band transceivers have dual band antennas.

While they do not stock these antennas, Purchase Radio in
Ann Arbor can order whatever you want. Perhaps you can call
them (734-668-8696) before you arrive in town and they can
order your antenna in time for your visit.

Most database systems are capable of exporting and importing text
files in ASCII, where each log entry is one line and the different
fields of the entry are separated by whitespace (i.e. space, tab)
or commas. Look in the manuals for loading "tab-delimited text files"
or "space-delimited text" or "comma-delimited text".

I've seen vehicles with an absurd number of antennas. Last weekend at the Findlay OH swap, there was a truck with no less than seven individual antennas. A look in the passenger compartment revealed an entire console of separate radios, each with separate mikes, carefully labelled as to frequency. It looked absurd! Someone ought to tell that guy about the modern multi-band rigs!

Most people choose an antenna that covers all the frequencies they want for mobile use. Often it's a single-band rig or a dual bander (say, 2M and 440) where a single antenna can be obtained that handles both bands. Hams that use HF while mobile often use a tunable antenna system - either a "screw driver" type (a motor-driven antenna length adjustment) or an antenna tuner. But, then there are the people who just like the pincushion look and don't mind the stares from the common folk.

I agree, Dan. The FCC typically didn't fine you unless you failed to
respond or failed to correct the problem. But what I'm trying to say
is that you *can* verify that a homebrew transmitter is clean without
breaking the bank, and you *should* do so as a matter of good
amateur practice.

You should do that *before* other amateurs are bothered, and before
the FCC gets involved (if perchance someone at the FCC was bored
enough to be tuning the amateur bands, and if perchance that person
was technically qualified to recognize a dirty transmitter when he heard
one, an increasingly unlikely occurance with today's FCC).

You still haven't explained to us, Dick, how the code requirement is
going to keep lawbreakers off the ham bands. When they fire up their
illegal transmitters without passing a written exam or a Morse code
exam do they vaporize or what?

I suspect both you and your wife are up there in years. The language used with their peers by many of the younger women I know would make an old time sailor blush. I doubt many of them would be shocked by what they heard on CB, in fact I suspect they might shock some of the CBers. And the same goes for a lot of today's kids, the language they use with their peers is pretty strong too, though some of them clean it up a bit when an old fogy is in earshot. We might long for the days when common speech was "wholesome" but I don't think we'll ever see those days again.

Used to have one, but too long back to recal. The battery is basically
for hold op of programed memories, etc. If its dead, then you lose it
all. However if you keep power on, it will be retained, of course.

Since you said it had been sitting around awhile, try this. Turn it off
Remove the head from the body of the rig. Take a pencil eraser and clean
the contacts and try to reseat it and see how it does.

Sounds like they may be FT-243 military surplus type rocks (crystal's)
circa WW II. Probably used in a variety of military equipment of the
day.

This sounds like they're in an FT-243 type holder. If "21.000" is in
"Mc" then you've got some 15m ham-band crystals. I'd be interested in
buying them from you.

I'm looking for a source for the manual and or wiring diagram for a heathkit HM 241 multimeter---any info would be appreciated

4307. How do I make a morse code osc. for practice?

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-16 00:00:00 UTC
From: The Murphy's <n9rxe@iland.net>
Message-ID: <360037AF.EDEC9764@iland.net>
Source record: 161732

I would like to build a morse code practice device, but don't know where to start. I've seen some schematics of how to build one, but I didn't have the $50 to buy the book at the time. A schematic would be nice or a place I could find this information.

Thanks

Any linear applications manual should have one. I remember a 555 oscillator
in either the National or Signetics linear applications manual.

In article <19980916085728.02342.00000010@ng83.aol.com>, stoli126@aol.com
says...
>
> I plan on passing my test next month for my tech license. If I want a separate
> antenna on my vehicle for each freq I am allowed to transmit on how many would
> i need. Is this crazy or do most people have multi band antenna. Do you have
> to do alot of explaining when pulling up in a parking lot and people ask What
> are
> all those antennas Need some answers Please Many thanks
>
Figuring your going to want to stay on the popular (read most used), I
would suggest 2m, 220 and 440. There are several antenna manufacturers
(Comet and Diamond) that will allow you to use one antenna for all 3
bands. You'll need a triplexer as well to combine the bands into one
feedline. If you want, an option is to go to 2m and 440 and have 6m as
well. When 6 meters is open, great DX possible. Again, triband antennas
exist for this combination.

No, you are not crazy. Most people run multiband antennas. It's a
matter of space on the car and the expense of multiple antennae.

As to the garage, most antennae have fold down capabilities so you don't
wack the begebbers out of them. Many a time I've hopped out of the car
to fold down the Comet (2,440 and 6) and disconnect the HF antenna when
going into a garage. Most people don;t seem to mind the 10 seconds it
takes.

As to the explaining of "all the fishing poles" and "what type of CB
antennas are those" I just explain that I am a Ham Radio Operator. The
next question usually asked is "how far can you talk on them?" And the
response is "to any point on the earth that can hear me"

Good luck. If you have more questions, e-mail me direct, I'll be glad to
help

My Gawd, man!!! Where've you been????
What does it take to convince you? Don't you get around enough to know
that all these "shootout" heavy metal dudes would be on the ham bands
****LEGALLY**** if not for the dreaded and dastardly Morris Code
requirement for getting a license? Once licensed and here, what's to stop them
then??? FCC enforcement??? Have you not heard of them making
that very statement??? Crawl out and look around--and listen up.
If you truly value the ARS as you claim, and are not just some Hi-Tech
troll-puppet, you WILL understand what this means.
Go find the website where the "CB Channels" are all listed. They run all
the way from Channel 1A at 25.165 mcs to Channel 40J at 29.655 mcs!!!
What do you suppose they plan to "do" with the ten meter band???

>it'd help a lot....thanks

Wave-length (in meters) = 300 / f (where f = freq'y in MHz).

For example:
The frequency range from 3.5 to 4.0 MHz has wave-lengths running from
about 86 to 75 meters; take the mid-point in this case, and you get
about 80 meters.

: Anyone out there have a PCS-3000 or know how to reset one?

: Also, the ham I bought it from retired it more than a year ago when he
: bought a new mobile, and the memory battery is dead. Is this why the
: radio locked up now?

Maybe - it might just be due to the dead/poor memory backup battery.
You *do* need someone with the manual to give you the *exact*
reset procedure. My PCS-4000 is similar, I believe, in that you need
to remove one of the covers; unplug the battery; short two of the PC
board connections where the battery plugs in; and turn it on - then off.
Or the somesuch.
It ain't done by fiddlin' with the front console controls.

Good luck es 73

I'd have thought you'd know, if you're the active ham you claim to be.
Every ham has an FCC-issued callsign. *NO* CBer/Freebander has any
such thing, just some self-assigned "handle". Bring your "handle" onto
any ham band and see how far you get. Even on the most radical
garbage-mouth frequency that wouldn't cut it. So no, they WON'T come
onto the ham bands /that are occupied/ and clearly, some have other plans.
But sure as the sunrise, give 'em legal status VIA easily obtained licenses
and we all have to live what the results.
If you haven't heard of locals who fit
this category, you haven't been paying attention, are too wrapped up in
your lab work, or just don't care. Otherwise you'd be aware of this.
That fact makes your entire focus very suspect. Do you really intend to
sacrifice the bands to whatever destruction surely follows, just to gain
standing and save face with some other engineers, who are so little
interested in ham radio that they couldn't really care less? Why is it that
so very many engineers of all sorts **HAVE** learned the code and got their HF
licenses without complaint?

I am more and more convinced that you are a total fraud. You have *not*
the best interests of ham radio at heart. Who knows what your real purpose
is?

>
>
>
>

> about requirements, Dick. Grow up and take a dose of reality. The FCC,
> not Morse code, is the only thing that will keep lawbreakers off the

> ham bands. "My Gawd, man!!! Where've you been????"

What they DO pay attention to is peer pressure, if that is the correct term,

when they come onto a ham band they know that the minute hams ID them
as intruders, the chase is on, and they'd rather not chance the outcome.
Even on the little-used 10 meter band, they've been chased away regularly
And the FCC just busted a bunch of NY City cabbies using modified CB
sets in the 10 meter band. So yes, it's more than clear that the code
test without question DOES keep intruders out. The fact that you insist
otherwise makes your whole position indefensible. You have been exposed.

You clearly don't know much about the hobby in which you've held a license
for so long. But then, if you were really serious about it, you'd have an
Extra class license by now, woudn't you?

>
>

> Same thing they are doing with it now which is operate illegally. Do
> you think if we taught Morse code to the freebanders, they would
> suddenly refrain from freebanding? Get real, Dick.

You might want to take good strong dose of your own medicine OB.
If the freebanders had any ambiton to learn code, they'd already be hams,
since those among them who did, are. The others are the problem. The
dudes who have big gun "Shootouts", couldn't care less how legal they
aren't and would gladly move operations to the ham bands--after all,
thers's no FCC enforcement there either. And if/when they "get legal" with
their own callsign and authorization to operate the ham bands, the very
factor that now keeps them at bay would be totally gone. They would be
as legal and authorized to do whatever they could get by with on the ham
bands as any other licensed ham. THAT's why we must not allow the
qualifications to slip any farther. It's already gone way too far.
You, the Techie who insists that all hams should be engineers, of all
people, should be a major proponent of keeping standards at least high
enough to prevent that sort of disaster to our bands. The fact that you
opppose what you claim to support speaks loudly and clearly.

Get real, Dick. At this very moment there are two freebanders talking
to each other on the data portion of the 10m ham band. NOTHING IS
HAPPENING TO THEM!!!

> I am more and more convinced that you are a total fraud.

Oh no, not that! I won't ever be able to sleep again.

> > It is ridiculous IN THE EXTREME to think a Morse code requirement is
> > going to keep lawbreakers off the ham bands.

> What is ridiculous it your belief that it does not!

What about the freebanding going on right now on the 10m ham band?
What's keeping them off right now, huh, Dick, huh? Certainly not
your words.

> What they DO pay attention to is peer pressure, if that is the correct term,

Awwwwhhhhhhh BS, Dick. Hams are not peers to freebanders. They don't give
a hoot what you think of them. They don't give a hoot what the FCC thinks.

> when they come onto a ham band they know that the minute hams ID them
> as intruders, the chase is on, and they'd rather not chance the outcome.

Hardeharhar. What are you going to do to them, Dick? Commit a felony against
their persons? How are you going to locate their mobile rigs?

> If the freebanders had any ambiton to learn code, they'd already be hams,
> since those among them who did, are. The others are the problem. The

Both bands should function equally well for either situation in a line-of-sight propagation type environment. However, transmitting simplex, your range/distance between xcvrs will be much more limited. If range is a consideration, 2m may be a better choice due to the propagation characteristics of UHF. At least this is my understanding. A more experienced ham can probably give you even more information, and further educate me as well.

Any simple audio oscillator that drives a speaker should be fine. All you have to do is put the key between it and the battery. I guess some oscillators will be better than others, providing a cleaner output and no chirp, but there have been an awful lot of code practice oscillator circuits published over the years, anda lot of them are terribly simple.

If you have any books about electronics, it's highly likely you can find a circuit for a simple audio oscillator that will work. If you don't have any books, you'd do well to visit an upcoming hamfest and buy an older edition ARRL handbook for a few dollars. While it won't be state of the art (it depends on how recently you can go and still get a low price), a lot of the basics will be the same, and there will be a CPO that you can build.

One of the first electronic books I ever bought was an ARRL Handbook. It's a bit sad that it only cost me $4.50 back then, and now you get a much heavier (and harder to manipulate) handbook that costs thirty or forty dollars. I figure I will splurge on a new handbook this year, the last one I have is 1990, but I don't look forward to the price. Years ago, I gave that first handook to a friend who was interested in ham radio (they were cheap enough back then that I bought the next year's edition, and some a few years later), and then came to regret giving away such a milestone book. I was able to buy a copy this year of that 1971 edition, for only twenty cents at a Rotary Club garage sale. Has that same two transistor CPO with a homebrew code key, and the ads in the back that weren't there in the 1972 edition.

Or, you might try the library. Often you will find an ARRL Handbook there, or some introduction to amateur radio which will have a cpo circuit that you can build.

As usual, the mental midget was busily engaged with jamming the 3901 frequency again this evening. This poor miscreant is to be pitied. Are there any mental health organizations in the area which will allow him to seek help for his troubles?

Maybe they should talk to the cb 'freebanders" in this area who thought
they would operate in the 10 meter band and nobody could do anything
about it. The hams tracked them down and took care of it and these guys
will think more than twice before they try it again.

Thanks for your time posting this. Interesting document.

I don't know if this is really related to your message...
During this time (1910s), I think, the oscillator and hetrodyning
circuits were being introduced. But there was resistance by some who
said, "SPARK FOREVER!"

4328. IPS Daily Report - 17 September 98

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-17 00:00:00 UTC
From: rwc@ips.oz.au
Message-ID: <6ts6a1$dt2@flare.syd.ips.gov.au>
Source record: 161553
Cross-posted to: aus.radio.amateur.misc,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 17/2330Z SEPTEMBER 1998 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 17 SEPTEMBER AND FORECAST FOR 18 SEPTEMBER - 20 SEPTEMBER
STATUS INDICATORS SOL:GREEN MAG:GREEN->YELLOW ION: GREEN->YELLOW

1A. SOLAR SUMMARY
Activity 17 Sep: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number for 17 Sep: 117/69

GOES satellite data for 16 Sep
Daily Proton Fluence >1 MeV: 6.5E+04
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 8.90E+06 (normal)
X-ray background: B2.8
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
18 Sep 19 Sep 20 Sep
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 18 Sep: 130/84
COMMENT: A previously M flaring region has returned to the east
limb of the sun. However, the region appears relatively quiet
at this stage.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 17 Sep: Quiet to unsettled

Estimated Indices 17 Sep : A K
Learmonth 5 3221 1111
Fredericksburg 4
Planetary 10

Observed Indices 16 Sep : A K
Fredericksburg 2
Planetary 4 0022 2222

2B. MAGNETIC FORECAST
Date Ap Conditions
18 Sep 10 Quiet to unsettled
19 Sep 12 Unsettled

20 Sep 15 Unsettled to active
COMMENT: IPS Geomagnetic Warning 30 was issued on 17 September
and is current for interval 20-22 September. A mild increase
in geomagnetic activity (active levels) is expected during interval
20-23 Sep due to a northern hemisphere solar coronal hole. There
is a chance for minor storm periods during local night hours
21-22 Sep.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
17 Sep Normal Normal Normal
PCA Event : No Proton/PCA Event In progress

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
18 Sep Normal Normal Normal
19 Sep Normal Normal Normal
20 Sep Normal Normal Fair
COMMENT: Initially good HF conditions are expected to continue
again today. However, high latitude HF communications are expected
to become mildly degraded during local night hours during interval
20-22 Sep.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
17 Sep 85

Observed Australian Regional MUFs:
near predicted monthly values

Predicted Monthly T index for September: 89

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
18 Sep 90 near predicted monthly values
19 Sep 90 near predicted monthly values
20 Sep 90 near predicted monthly values

Want to trade Kenwood YK-88C CW filter (500 Hz) for YK-88CN (270 Hz).

This is TS-130/830 vintage.

Please let me know if you have a YK-88CN that you would like to trade.

Alan, N3BJ

If you are referring to standard "narrow band FM"
the rigs you mentioned are designed for it.

Chris N9LLO

no, I mean to make the equiptment more narrow. instead of +/-5khz
deviation, +/-3 khz, or from 12.5 khz channel spacing to 6khz channel
spacing or even narrower.
Ron

Actually my fiancee is appalled by the behavior on CB. She hates it
when I have it on. Of course, on our trips to her hometown 100 miles
away on the interstate CB is necesary. She never uses profane language,
and considers those who do to be lowlifes. We are in our upper 20s /mid
thirties and have heard and seen it all. Just because they all do it
does not mean we need to lower our standards and become one of "them"

just because "times change" does not mean proper behavior patterns
should be thrown out the window. If we need to use the radio, we have
our FRS radios with us, with the CTCSS set on.

Hahahahahahahaha That's really funny. Care to site *ANY* credible
evidence to support that outrageous claim? The history of CB
is clear on the matter and Morse Code *NEVER* had anything
to do with CB going from order to chaos. Idiots like you believe
that your "skill" in Morse Code somehow measures your behavior
on the air. Well, listening to your buddies on 20 and 75 meters
would indicate otherwise.

> Once licensed and here, what's to stop them
>then??? FCC enforcement??? Have you not heard of them making
>that very statement??? Crawl out and look around--and listen up.
>If you truly value the ARS as you claim, and are not just some Hi-Tech

>the way from Channel 1A at 25.165 mcs to Channel 40J at 29.655 mcs!!!
>What do you suppose they plan to "do" with the ten meter band???

Are you really as stupid as the above makes you appear? If the
FCC isn't doing enforcement, what makes you think Morse
Code (an FCC requirement) is keeping *ANYONE* off of
our bands? Either someone is a lawbreaker or they aren't.
Why would a law breaker care about a license or any FCC

requirement such as Morse Code. Are you really so dense
you can't understand that?

The VE could use a flashing light since your friend's visual center
is not affected.

So what new and wonderful research and development has your friend
contributed in the V/UHF realm with his Tech+ license? If he desires
to conduct R&D on HF, he doesn't need a license. He can use your
station while you're the control operator.

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH2PZ, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see
http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Cecil....

That is why we have code exemptions, unlike some others I have no
problems with the code exemption scheme as currently constituted.
Other people have moaned and groaned about how scofflaws use the
code exemption system to "cheat" on getting licenses/upgrades.
Perhaps there has been some abuse it, but I haven't seen any evidence
of it. The whiners want the rule rewritten to force doctor/patient
privelege to be waived by requiring medical records to be forwarded
to the VEC's. (although nothing was mentioned about VEC's having
a cadre of medically trained individuals who could assess such
records) IMHO, the PICON value of code exemption does NOT justify the
waiving of doctor/patient privelege. Waiving privelege may be
justified in other forms of licensing, such as FAA medicals or
Coast Guard seaman licensing, planes can fall from the sky and
ships can collide, but amateur radio licensing is a bit different,
I don't expect an amateur station to land on my head or ram me
midships when I'm out on my boat.

W6RCecilA wrote:
>
>
> Don't have any experience with that but 50Hz Japanese power supplies
> work just fine on 60Hz.
> -

Ah, but that's the easy way round. Iron transformers for 50Hz get wound with more turns per volt to increase the primary inductance and hence keep the magnetising current down. Reservoir capacitors have to be a bit larger for 50Hz, for the same brownout tolerence. The Japanese mains can dip to 88v RMS and still be within its spec. The difficulty is in making a good robustly tolerenced design that can work on Japan's nominally 100v supply on a low day (and still be usable on another range on the UK's 240v nominal on a high day).

Unless a transformer has very crude, thick, laminations and a poor core material, efficiency is usually noticably better on 60Hz than on 50Hz. Ripple currents in reservoir capacitors will also be lower at 60Hz, leading to less heating and loss of electrolyte water content.

Cheers
David GM4ZNX

I agree on the value of CB when out on the Interstate. I have saved countless hours of being stuck in traffic jams by listening to Ch. 19.

Like your fiancee, my wife does not want to hear the trash on the radio. I solved the problem with a small earphone. The more expensive ones ($10) deliver excellent sound, and yet still allow me to carry on a conversation in the car.

Actually, what I do is listen for a few minutes every half-hour. Then I slip the earbud off and place it on the seat. After 30 minutes, I again listen for five to 10, just to hear what the trucks in the other lane are saying about the road "over their donkey."

The CB is accompanied by a good set of maps--especially ones which give details for major cities. I have a great story about getting around the site of an overturned tanker in Richmond, rejoining I-95 a few miles "downstream" of the accident, and then having the highway to myself. Everyone else was still stuck.

Different logic than is used to promote gun control. Do you believe that licensing guns will prevent criminals from having and using guns? If we cannot control something as physical as a gun, how the hell are we going to control electromagnetic waves?

> Don't you get around enough to know
> that all these "shootout" heavy metal dudes would be on the ham bands
> ****LEGALLY**** if not for the dreaded and dastardly Morris Code
> requirement for getting a license?

It is ridiculous IN THE EXTREME to think a Morse code requirement is going to keep lawbreakers off the ham bands. Lawbreakers don't care about requirements, Dick. Grow up and take a dose of reality. The FCC, not Morse code, is the only thing that will keep lawbreakers off the ham bands. "My Gawd, man!!! Where've you been????"

> Go find the website where the "CB Channels" are all listed. They run all
> the way from Channel 1A at 25.165 mcs to Channel 40J at 29.655 mcs!!!
> What do you suppose they plan to "do" with the ten meter band???

Same thing they are doing with it now which is operate illegally. Do you think if we taught Morse code to the freebanders, they would suddenly refrain from freebanding? Get real, Dick.

It will all be a moot point anyway, after the terrorists release the anthrax and bubonic plague vials next year that they have already smuggled into this country.

I, too am disgusted by CB. I was listening to channel 10 the other day
and some one was cursing everyone out. Pretty soon there was online
fights, and even death threats. I have heard prostitutes advertising
on CB, and drug deals. It is almost as much as cesspool as IRC.
That is why I like ham radio. You don't often hear abusive language.

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <694>
.....
>From the Mailbag:

From: Don Kulha <dkulha@vom.com>

Hi Dave:

Given the emergency nature of our work, the need for power and the fact that utility power isn't always available I think the following info may be useful to a lot of folks.

Besides my involvement as an ACS volunteer in Sonoma County, CA/Russian River Unit I also work with "Home Power" (HP) magazine. HP is about providing your own power and is called "The Hands-On Journal of Home-Made Power". The main thrust is about making, storing and using power efficiently off-the-grid with an emphasis on renewable energy sources. Much of the info, particularly that about batteries, chargers and controls, inverters, efficent appliances and lighting directly relate to the type of emergency power back up systems we would like to have for disaster response work. I've found my system very handy when responding to flood events along the Russian River here.

The current issue of HP along with other useful info is always available for download at our website. You're invited to drop by and download it at http://www.homepower.com

Regards, Don Kulha
Sonoma Co. CA, Russian River ACS Unit

.....
CANADIAN AMATEURS SUPPORT RECOVERY EFFORT

Within approximately 2 hours after the SwissAir crash, Barry Manuel, the Emergency Measures Coordinator for Halifax Regional Municipality initiated a call-out to members of the HRM-EMO Amateur Radio Group. The call was initiated through Dave George, VE1AJP, who is the contact for Emergency Measures Office and the RAC ARES Coordinator for the Halifax area. John Byrne, Director of the Nova Scotia Region, Canadian Red Cross, activated the Disaster Response Team including the Telecoms Officer, Joe MacPherson, VE1CH, and directed hams to report to the site and join the Emergency Response Vehicle at that location.

Amateurs were dispatched to the Command bus at Peggy's Cove and were asked to establish telecommunications between the site and a net control station in downtown Halifax. Amateurs were also sent to CFS Shearwater and to several other staging areas which were subsequently moved or closed down as more accurate information filtered in. Emergency ID cards and vehicle identification cards were required to gain access to both the outer and inner perimeter.

As Telecommunications Officer for the Canadian Red Cross, VE1CH called in members of the Senior Amateur Radio Association to activate the communications centre at the Canadian Red Cross Headquarters in downtown Halifax and also set up amateur and other telecommunications links between the on site Emergency Response Vehicle of the Red Cross, the Command Post, Red Cross HQ and the net control station.

Amateurs at the Command Post were kept very busy interfacing between the on-site commander, the military, and just about everyone else to whom the site commander needed to talk. Approximately 20 amateurs made themselves available and a shift roster was set up for twenty-four hour operation by the network control station. Two repeaters were used in the operation, one for traffic handling, the other for personnel coordination and assignment.

Amateur operators were also asked to provide emergency HF links to the military and naval ships engaged in the search and were also asked to establish communications on marine emergency frequency of 156.8 MHz.

The response was both fast and efficient considering the
hour and the number of people needed. The entire operation
was moved from the Blanford area near Hubbards, to Peggy's
Cove when the exact position of the debris field became known.

The extensive training provided to members of the HRM-EMO
team over the past year really paid off. Radio procedures were
excellent and there were many reports from senior officials at
the site on how well the amateurs performed.

.....
On Coastal Cleanup Day, Saturday, September 19, 1998, residents
from across the state will pull together as one community in a
massive effort to maintain our shoreline as the jewel of our
Golden State.

Tens of thousands of volunteers will take to the beaches from San
Diego to the Oregon border, to the lake front of Lake Tahoe, to the
shorelines of inland creeks and rivers of Sacramento, Fresno, and
other waterways throughout California.

In 1997, almost 50,000 Californians picked up over 1,000,000
pieces of debris that weighed in at 700,000 pounds. The collected
data is a powerful voice for conservation and is used to influence
governmental and corporate policy. The Center for Marine Conservation
tabulates most items that are picked up on Coastal Cleanup Day.
1998 promises to be even bigger.

Here is How You Can Participate: Select a location and pre-register!
Beach cleanups will be held in every coastal county and a number
of inland counties in California. Select the area that you would like
to help clean and then recruit your friends, family, and co-workers.
Call the local coordinator to pre-register and select a beach to clean.
All the information needed can be found at the following web site:

http://www.ceres.ca.gov/coastalcomm/ccd/ccd1.html

This is a non-amateur related activity that all of us should
participate in and it's also a way to accomplish something good
while being outside in this wonderful area that we all live in.

This week's EMCOMM Bulletin:

EMC149 4 C's of Communications
To: Emergency Communications Units - Information Bulletin
To: Emergency Management Agencies via Internet and Radio
By: Auxiliary Communications Service (ACS) of the
California Governor's Office of Emergency Services

EMC149 4 C's of Communications 9/14/98

The Four C's of Emergency Communications

Tom Currie, N4AOF, recently suggested a few simple ways to
improve your overall emergency communications capability.
Although Tom has a background with Kentucky REACT, his advice
can apply to any organization utilizing emergency communications,
either paid or volunteer:

"The best advice for anyone performing emergency communications
can be summarized by the four C's: Calm, Courteous, Correct, and
Concise.

"CALM. Try to keep emotion out of your voice. No matter what the
emergency, a calm, professional attitude will help keep things cool
and get the message through more quickly and accurately. Losing
your cool, calm attitude may cost an important message. The more
reason you have for getting excited, the more important it is for you to
remain calm. As an emergency communications volunteer you should
set a good, calm example for the other people to follow.

"COURTEOUS. You must think of yourself as a public servant.
Regardless of provocation, remain courteous at all times. Never display
temper on the air. Remember the "Golden Rule" at all times and
practice it. Never fight with other operators over calls or reports.
Always follow the instructions of the Net Control Station - whether you
agree with those instructions or not. Most problems can wait until
after the emergency situation is over. If some problem absolutely
must be ironed out, do it by telephone or on another frequency
- not on the net.

"CORRECT. Work to keep errors out of your communications. Use
the phonetic alphabet and repeat the message where appropriate
to get names, locations, and other information accurately. Write
everything down for reference. Remember, your role is
communications - you are not in charge of anything - most

communications will be between the people who are in charge
- when the Emergency Operations Center or Net Control Station
asks a question, go get the answer from the person responsible,
don't just give your best guess. It is always better to admit you don't
know rather than give out information that is wrong. Always use
plain language -- Don't use jargon, Q-signals, 10-codes, etc., which
may not be understood by everyone. Avoid using specialized words
and codes, even those of the agency you are supporting unless
the message is going specifically to the same agency.

"CONCISE. Your job as a emergency communications volunteer is
to get the message transferred while also allowing time for the other
operators to get their messages transferred. Avoid tying up the net
by keeping your transmissions as brief as possible. Always leave
a few seconds between transmissions in case someone needs
to break in with an emergency call. A strictly business attitude is
your best technique for assuring time saving communications.
You must consider the conditions - if everyone is full-quieting,
there is little need to spell words, but if conditions aren't good or the
word is particularly difficult, then it makes sense to spell it.
Don't rush - speaking a little bit slower often gets the message
through faster because the other operator doesn't have to ask for
repeats. Don't assume everyone has a pad and pencil instantly
ready when you need to send them a long or complex message
- ask first, it saves time in the long run."

4361. Free "Internet Alarm Clock Radio" Program

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-17 00:00:00 UTC
From: davesnell@my-dejanews.com
Message-ID: <6trvb8$t4p$1@nnrp1.dejanews.com>
Source record: 161628

Ark Royal Software is beta-testing a JavaScript program called "RadioStar" that works with audio players such as RealPlayer and NetShow to bring listening enjoyment to anyone with an Internet connection. If you'd like a free copy of this program, you can browse to "http://www.7heavens.com/softfount.htm" to see RadioStar and get all the details. We can also send you a pkzipped archive of RadioStar, if you like.
In exchange, please send us a report of any suggestions or problems you have with RadioStar, after you have examined it. Please tell us what browser, browser version, and computer you are using.
Currently the program is designed to work on Internet Explorer 4.0 and Netscape Navigator 4.0, on the IBM PC computer.
We will be working on the program so that Mac Owners and users of the 3.0 browser versions can use it. If you use this type of computer system, please e-mail "radiotest@7heavens.com" and we'll set you up with the program when it is approved for your system.

Here's a brief description of RadioStar's features:

Now you can put a loaded radio/TV on your desktop for only $14.95! There are over 4000 stations on the Web, from all over the world, and an infinite variety of recorded sound clips. RadioStar allows you to visit them and hear any kind of sound source, from MIDI to RealAudio. With one click you can simultaneously see any site's visual page, and play its sound source for your listening enjoyment. Here's a list of all the great features of RadioStar:

-0ver 20 RealAudio sound sources come pre-loaded in RadioStar. Select from categories of News, Business, Sports, Science/Technology, Music and your own Favorites list.
-Add any sound or video source to the list of stations on your RadioStar.
-Local and World Clocks show you the time and date in your area, and virtually any time zone of any country in the world.
-Alarm Clock feature lets you set a timer to begin playing a sound source anytime you want.
-Four kinds of alarms! When the alarm is activated, RadioStar can play a RealMedia site, or display a memo, or play a Midi file, or visit and download a web page. RadioStar isn't just a radio, it also has a wide range of multimedia capabilities!
-A calendar and scheduling feature is included.
-Multiple automatic site downloads. This just means you can schedule RadioStar to download any number of sites at any time,

day or night.
-Automatic online access. If your browser is not online at the time the alarm is set to go off, then RadioStar will cause the browser to automatically go online and start playing the sound source.
-It's fast-loading. The program is compact and runs inside the browser, so if that's already running, RadioStar will take only a few seconds to load.

Best Regards,

David Snell

4362. Re: broadcast band antenna

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-17 00:00:00 UTC
From: Reg Edwards <G4fgq.Regp@btinternet.com>
Message-ID: <01bde2c0$fe023e40$ede5abc3@default>
Source record: 161629
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.antenna,rec.radio.amateur.misc

Program RJELOOP3 will assist with design of multi-turn loop for the broadcast band. The difference between laying the turns inside each other in a thin spiral, or laying the turns alondside each other is negligible. Use a square wood frame construction. The name used was "Frame Antenna". The larger the enclosed area, the more sensitive it will be. Will null out a source of noise or interference if you make it rotatable. Almost any sort of insulated wire can be used.

Download the program from my website in a few seconds. Not zipped-up. Can be used immediately.

AMATEUR RADIO HAS HIGH PROFILE AT ITU CONFERENCE

Amateur Radio will enjoy a high degree of visibility when the ITU
Plenipotentiary Conference convenes next month in Minneapolis--even
though ham radio frequency allocations are not on the agenda. ARRL
Technical Relations Manager Paul Rinaldo, W4RI, has been appointed to
serve as a member of the US delegation to the international gathering,
```

October 12 to November 6. ARRL International Affairs Vice President and International Amateur Radio Union Secretary Larry Price, W4RA, will attend under United Nations auspices. Price will serve as senior advisor on Emergency Telecommunications for the UN Office of Humanitarian Aid. The longtime former director of the ITU Radiocommunication Bureau, Richard Kirby, W0LCT, also will attend on behalf of Amateur Radio.

ARRL President Rod Stafford, W6ROD, and Executive Vice President David Sumner, K1ZZ, are expected to visit the conference but will not participate as delegates.

While Amateur Radio matters are not specifically slated for discussion at the conference, "there are items on the agenda that have the potential to affect us," said Price.

Two special event stations will be on the air during the conference. W98ITU will be set up in the conference center at Minneapolis, run by operators from the Twin Cities area. The primary W98ITU operating position will control a remote Kachina transceiver and antenna site some 15 miles from the conference center. A second operator position will use a Ten-Tec OMNI VI Plus, solid-state amp, and an Explorer 14 beam at the conference site. W98ITU is expected to be on the during the day on weekdays and for entire weekends. A full-fledged satellite station also will be on the air, according to ARRL Dakota Division Director Tod Olson, K0TO, who's coordinating the operating activity. Also during the conference, the W0AIH multiop station will use the call sign N98ITU during the CQ Worldwide Contest (SSB) October 24-25. Separate, special event QSL cards will be available for those working either W98ITU or N98ITU.

The ITU Plenipotentiary Conference--held every four years--is the organization's top policymaking body. It sets general ITU policies, adopts five-year strategic and financial plans, and elects the senior management team.

One good sign for the hobby in terms of its international presence is the fact that the current director of the Radiocommunication Sector, Robert W. Jones, VE3CTM, is the only one of the three incumbent sector directors who is unopposed for re-election.

The Minneapolis "plenipot" marks the first time in more than 50 years that a Plenipotentiary Conference will be held in the US. The last one on American soil was in Atlantic City, New Jersey in 1947.

LEAGUE ASKS FCC TO HOLD THE LINE ON CONDUCTED EMISSIONS

The ARRL has asked the FCC to hold the line on current conducted emission limits below 30 MHz from unlicensed consumer electronic, industrial, scientific, and medical devices operating under Parts 15 and 18 of the Commission's rules. Interfering devices include such common household appliances as computers, TV sets, and microwave ovens. Conducted emissions result from RF voltages imposed on the a.c. power line, which can, in turn, act as an antenna. In general, the current

conducted emission limit is 250 uV.

In comments filed in response to a Notice of Inquiry on conducted emission limits below 30 MHz in ET Docket 98-80, the League said the proliferation of Part 15 and 18 devices over the past decade as resulted in what it called "a marked increase in RF noise from conducted emissions generally." The ARRL said it "wholeheartedly agrees" with a tentative FCC conclusion that some limitations continue to be necessary to control interference to licensed radio services in the HF range.

The League said that current Part 15 and 18 limitations are "not sufficient" to prevent interference to hams from conducted emissions. The League said it would be "most inappropriate" to consider relaxing the limits "unless and until the consumer electronics industry is provably able to properly respond to the interference problems."

The League concluded that because most interference from Part 15 and 18 devices to licensed HF services results from conducted emissions, "it is especially important that the Commission retain what minimal protection exists from the present regulations."

The League has already called on the FCC to not relax line-conducted emission limitations at 2.4 GHz and has recommended a 300-meter distance limitation from residential areas if the FCC adopts the relaxed conducted and radiated emission limits it proposed in a separate proceeding (WT Docket 98-42). That proceeding focused on updating regulations for Part 18 RF lighting devices.

ARIZONA HAMS HELP LOCATE LOST TODDLER

An Arizona toddler is safe, thanks in part to help provided by the Cochise County ARES/RACES unit. The team was activated around 8:45 PM on September 8 to assist the Sheriff's Office Search and Rescue unit in locating the lost 2-1/2 year old boy who had wandered away from his home earlier in the evening.

The unit deployed the County Emergency Response Van (ERV) to an area near the Cochise/Graham county line north of Willcox, Arizona, to assist in the search. Elements from several other public safety units--more than 75 people in all--also turned out.

Bob Hollister, N7INK, and Ron DeWillers,W1YYO, spent the night manning radios in the emergency response van and helped to keep track of the search teams as the vigil wore on. Just as the ERV relief team showed up to take over the day shift, the little boy was located by a county search-and-rescue dog team some two miles from his home in a cornfield. "Other than being tired, hungry, a little dehydrated, and thoroughly intimidated by the experience, the young man was fine," reports Arizona Section Manager Cliff Hauser, KD6XH. The youngster had spent about 15 hours in the fields trying to find his way back home.

Hauser said that eight amateurs were involved in the search effort.--thanks to Arizona SM Cliff Hauser, KD6XH

LEAGUE SAYS 75 MHZ FOR DSRC IS TOO MUCH

The ARRL says the FCC is proposing too much spectrum at 5.9 GHz for deployment of Dedicated Short Range Communications (DSRC) systems for intelligent transportation system (ITS) applications. The League's comments follow a June 11 Notice of Proposed Rulemaking (ET Docket No 98-95) in which the FCC proposed setting aside 75 MHz--5.850 to 5.925 GHz for use by ITS on a coprimary basis. The Amateur Service has a secondary allocation at 5.650 to 5.925 GHz, sharing with government radars and nongovernment fixed satellite service uplinks.

The League said the FCC should compensate for the DSRC incursion by elevating the remaining Amateur and Amateur Satellite allocations at 5.650 to 5.725 and 5.825 to 5.850 GHz to nongovernment primary "to insure against future preemption by nongovernment services with higher allocation status."

The ARRL said it's not apparent from the FCC's NPRM that 75 MHz of spectrum is necessary. The DSRC allocation at 5 GHz in Europe is only 10 MHz wide, the League pointed out, and the FCC Notice does not account for the disparity "between that bandwidth and the claimed need for 75 MHz for unspecified future DSRC applications." The League said the Commission ought to explore the opportunities of frequency reuse and the availability of the 902-928 MHz band for some DSRC functions.

In earlier comments, the League questioned whether the 5.9 GHz band was appropriate for DSRC and urged the FCC to look into frequencies above 40 GHz, where DSRC systems could avoid interference from other users.

The League also recommended that the Commission mandate prior coordination between ITS America (a nonprofit ITS promotional organization) and the League or restrict DSRC facilities to those using "listen-before-transmit protocols and frequency-agile transmitters with roaming channel selection."

Possible ITS applications include various highway safety systems, including traffic control, automated roadside safety inspections, enroute driver information systems, and systems where DSRC-equipped vehicles could be equipped to more quickly detect traffic congestion and dispatch emergency personnel or take other actions.

ITS DSRC transmissions would be "narrowly focused and rapidly dissipating signals," according to ITS America. The FCC has proposed a maximum of 30 W EIRP for DSRC systems.

A copy of the League's comments is available at http://www.arrl.org/announce/RM-9096-cmt.html.

HUMANITARIAN AWARD NOMINATIONS OPEN

Nominations are open for the 1998 ARRL International Humanitarian Award. The award is dedicated to those amateurs who, through Amateur Radio, are devoted to promoting the welfare of mankind. The prize goes each year to truly outstanding Amateur Radio operators in areas of international

humanitarianism and the furtherance of peace.

Any radio amateur or group of amateurs worldwide who has provided extraordinary service through their Amateur Radio skills for the benefit of others in times of crisis or disaster is qualified to receive the award.

The ARRL International Humanitarian Award recognizes the hobby's international communication role and that hams regularly help people in need throughout the world. Amateur Radio is one of the few media where average people throughout the world can meet to talk to each other and spread goodwill across otherwise impenetrable political boundaries. The Award is intended to promote positive efforts toward international understanding and peaceful communications.

The award recipient is selected by a committee appointed by the League's President. The committee will accept nominations from a licensed radio amateur, governmental or any other organization that has received the benefits of the radio amateur's extraordinary service. Nominations must include a summary of the nominee's actions that qualify the recipient for the award, and statements from at least two references--including names and addresses--for verification.

All nominations and supporting materials for the 1998 award must be submitted in writing in English to ARRL International Humanitarian Award, 225 Main St, Newington, CT 06111 USA. Nominations must be received by December 31, 1998. In the event that no nominations are received, the committee itself may determine possible recipients or decide to make no award.

The award winner receives an engraved plaque and is profiled in QST.

LEONID LABUTIN, UA3CR/AB4LZ, SK

A major player in the Russian Amateur Radio satellite scene, Leonid Labutin, UA3CR, died September 10 at his summer residence near Moscow. He reportedly suffered a heart attack. He was 70.

Labutin was directly involved in various RS satellite projects and helped bring ham radio into the Russian Mir space station. AMSAT-DL's Peter Guelzow, DB2OS, says he worked with Labutin on the first Russian/German AO-21/RS-14 project. Guelzow says Labutin also helped with the Phase 3D project, and he remained active in the amateur satellite field until his death.

"I personally lost a good friend and will miss him," Guelzow said in a posting to the AMSAT Bulletin Board.

Georgia Section Manager Sandy Donahue, W4RU, recalls that Labutin was a guest at the 1988 AMSAT National Conference, among the first Soviet hams to visit the US. After the convention, Labutin was given a complete set of ARRL license manuals. The next day, he passed his Extra, very likely the first Soviet citizen to acquire a US Extra ticket, AB4LZ, which

expires in December.

Services were September 12 in Moscow.

IN BRIEF:

* This weekend on the radio: YLRL Howdy Days, the QCWA QSO Party--Part 2, the ARRL 10 GHz and Up Cumulative Contest, the Air Force Anniversary QSO Party, the Washington State Salmon Run, and the Tennessee QSO Party are this weekend. Just ahead: The CQ WWW RTTY Contest, the Heart of Dixie QSO Party, and the Classic Radio Exchange are the weekend of September 26-28. See September QST, page 103, for more information.

* AMSAT Board members elected: Tom Clark, W3IWI, Keith Baker, KB1SF, and Andy MacAllister, W5ACM, have been elected to two-year terms on the AMSAT-NA Board of Directors. A total of 1238 AMSAT members cast ballots in this year's election. Clark received 1063 votes, Baker 1005, and MacAllister 851. Candidate, Barry Baines, WD4ASW, received 657 votes. He will serve as an alternate on the Board.--AMSAT

* Miss America Special Event: The gang from the Southern Counties Amateur Radio Association have been operating K2BR during the week of the Miss America Pageant in Atlantic City, New Jersey. Operation continues on HF and occasionally on satellites until September 20. A special K2BR Miss America QSL card will be available. QSL to SCARA, PO Box 121, Linwood, NJ 08221.

* The ARRL Answer Man--WA1PIX: The newest member of the ARRL Laboratory staff is Technical Information Service (TIS) Coordinator George Beloin, WA1PIX. A native of Bridgeport, Connecticut, Beloin says he cut his electronic incisors at an early age. When the other kids were learning to ride bicycles, he was teaching himself how to solder. A ham since 1971, he holds an Extra class ticket. He's worked in electronics as a troubleshooting tech, engineering aide, and other positions. Besides ham radio, he enjoys astronomy, music, and skiing. "I see my position here as a chance to help people understand what I do about electronics--or at least help us both to learn together," he said. If you've got a tough ham radio or electronics problem or question, give George Beloin a call at 860-594-0214; e-mail gbeloin@arrl.org (he prefers questions via e-mail) or write Technical Information Service, ARRL, 225 Main St, Newington, CT 06111.

* Digital Communications Conference: It's almost upon us! The 17th annual ARRL and TAPR Digital Communications Conference is September 25-27, at the Holiday Inn Rolling Meadows, just minutes from Chicago's O'Hare Airport. This marks the third year the ARRL and TAPR have joined forces for this event, an international forum for radio amateurs in digital communications, networking, and related technologies. Presenters and attendees have the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results, and practical applications. In addition to a presentation of papers on

Saturday, three symposia/seminars will be held, with separate registration available. For details and registration information, visit http://www.tapr.org or contact Tucson Amateur Packet Radio, 8987-309 E Tanque Verde Rd #337, Tucson, AZ 85749-9399; tel 940-383-0000; fax 940-566-2544; e-mail tapr@tapr.org.

* HPM book available from ARRL: The biography Hiram Percy Maxim by Alice Clink Schumacher is the result of nine years of research into the life of the League's co-founder and one of America's truly great pioneers. The book explores Maxim's many devotions as inventor, scientist, writer and humanitarian. Often revered as "The Father of Amateur Radio," Maxim also pioneered in the automobile industry, air conditioning, space research, and invented the famous Maxim gun silencer. Schumacher's 216-page book is a tribute to Maxim's ingenuity and determination. It's $19.95 and available from the ARRL. Order item no. 7016. Visit ARRLWeb or call toll-free, 888-277-5289.

* Turnabout is fair play: ICOM plans to one-up the still-unavailable Yaesu FT-100 with yet another IC-706 model that will include 70 cm and more power on 2 meters! ICOM has told dealers its new IC-706MkIIG will be available at Amateur Radio retailers in December or January. It will offer 50 W on 2 meters and 20 W on 70 cm. The new "G" model also will have backlighted switches for nighttime operation, and tone squelch as standard features. ICOM estimates it will sell in the $1600-1700 price bracket. The IC-706MkII will remain available. Yaesu's new multiband, all-mode FT-100 compact transceiver, introduced at Dayton, will cover all amateur bands from 160 meters through 70 cm, except for the 222 MHz band. Yaesu now says the FT-100 will be on the market "in the fall."

* On the street: Ten-Tec's PC-controlled RC-320 receiver is on the street. The model RX-320 is the first "black box" receiver from a US manufacturer. Carrying a price tag of $295, the RX-320 offers reception up through HF.

* RFconcepts on the block: Kantronics President Phil Anderson, W0XI, is soliciting a buyer for the company's RFconcepts product line of VHF and UHF amplifiers. A fax recently went out to several QST advertisers this month. Kantronics says the RFconcepts line "does not fit within our strategic plan for the future" but would be an "excellent buy" for someone else. Kantronics, headquartered in Lawrence, Kansas, bought the RFconcepts division in 1989 and moved it from California. Kantronics will continue to manufacture its line of digital products. The company recently introduced its KAM '98 single-port multimode HF/VHF TNC. The sale would include the RFconcepts name, current and non-current designs and manuals, finished goods, raw inventory stock, tooling, and vendor and dealer lists. Interested? Contact Anderson or Kay Runge, plant manager; tel 785-842-7745; e-mail sales@kantronics.com; http://www.kantronics.com).

* EROS special event: The EROS Data Center near Sioux Falls, South Dakota, celebrates its 25th anniversary September 19 with a special event station W0E. The EDC--a national mapping center under the

direction of the United States Geological Survey--houses the largest archive of aerial photos, satellite and space shuttle images in world. EDC is a ground receiving station for NOAA-14 and 15, and will also be a ground operations station for the upcoming Landsat-7 satellite. South Dakota AMSAT Area Coordinator Chad Phillips, KG0MW, says the station will be active on several satellites, including UO-22, RS-12, FO-20, FO-29, and, "conditions permitting," AO-10. HF operation also is scheduled. A color QSL card will be available for those who work W0E. For more information about the EDC, see http://www.edcwww.cr.usgs.gov/content_about.html. For more information about W0E, contact KG0MW at cphillips@edcmail.cr.usgs.gov.--AMSAT News Service via Chad Phillips, KG0MW

* SoCal ACS Emergency Response Institute: The Southern California ACS Emergency Response Institute is set for October 10-11 at the Ben Clark Public Safety Training Center in Riverside, California. The theme will focus on the theme "D2K: Dealing with the Disasters of the Next Millennium." The sessions are open to both volunteers and professionals from organizations and agencies with an interest in promoting better emergency services operations. To register, visit the Office of Emergency Services site at http://www.qsl.net/races/eri. Registration is $35.--thanks to Dave Larton, N6JQJ

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit ARRLWeb at http://www.arrl.org.

The purpose of The ARRL Letter is to provide essential news of interest to active amateurs promptly and efficiently, and in advance of publication in our official journal, QST. The ARRL Letter strives to be fast, accurate, concise, and readable.

Material from The ARRL Letter may be reproduced in whole or in part in any form, including photoreproduction and electronic databases. Credit must be given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, ARRL members should visit the League's Members Only Web Site at http://www.arrl.org/members/ and follow the registration instructions. Registration also provides access to The ARRLWeb Extra, a news and feature magazine.

For members and nonmembers alike, The ARRL Letter also is available free of charge from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. NOTE: The ARRL Letter will be posted each Friday as soon as possible after publication.

* The Netcom listserver operated by volunteers from the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list". (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via the Netcom listserver.)

* The HIRAM BBS: 860-594-0306. The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published Fridays). For example, to request The ARRL Letter file for Friday, September 4, 1998, type "send ltr0904.txt". Then, on a separate line, type "quit". The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

As for one I think we should keep the CW test. Used the excuse for years even could get it verified by and MD. Never used and passed the code. There are cases I'm sure, just as there are real handicapped people using the handicapped parking but there are far to many that get MDs to sign off for them. Most of us that have a real handicap would prefer to make it on our on.

4370. ARLB073 League asks FCC to hold the line on conducted emissions

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-17 00:00:00 UTC
From: w1aw@arrl.org
Message-ID: <$arlb073.1998@arrl.org>
Source record: 161637
Cross-posted to: rec.radio.info,rec.radio.amateur.misc

SB QST @ ARL $ARLB073
ARLB073 League asks FCC to hold the line on conducted emissions

ZCZC AG73
QST de W1AW
ARRL Bulletin 73 ARLB073
From ARRL Headquarters
Newington CT September 17, 1998
To all radio amateurs

SB QST ARL ARLB073
ARLB073 League asks FCC to hold the line on conducted emissions

The ARRL has asked the FCC to hold the line on current conducted emission limits below 30 MHz from unlicensed consumer electronic and industrial, scientific, and medical devices operating under Parts 15 and 18 of the Commission's rules. Interfering devices include such common household appliances as computers, TV sets, and microwave ovens. Conducted emissions result from RF voltages imposed on the a.c. power line, which can, in turn, act as an antenna. In general, the current conducted emission limit is 250 uV.

In comments filed in response to a Notice of Inquiry on conducted emission limits below 30 MHz in ET Docket 98-80, the League said the proliferation of Part 15 and 18 devices over the past decade as resulted in what it called ''a marked increase in RF noise from conducted emissions generally.'' The ARRL said it ''wholeheartedly agrees'' with a tentative FCC conclusion that some limitations continue to be necessary to control interference to licensed radio services in the HF range.

The League said that current Part 15 and 18 limitations are ''not sufficient'' to prevent interference to hams from conducted emissions. The League said it would be ''most inappropriate'' to consider relaxing the limits ''unless and until the consumer electronics industry is provably able to properly respond to the interference problems.''

The League concluded that because most interference from Part 15 and 18 devices to licensed HF services results from conducted emissions, ''it is especially important that the Commission retain what minimal protection exists from the present regulations.''

The League has already called on the FCC to not relax line-conducted emission limitations at 2.4 GHz and has recommended a 300-meter

distance limitation from residential areas if the FCC adopts the relaxed conducted and radiated emission limits it proposed in a separate proceeding (WT Docket 98-42). That proceeding focused on updating regulations for Part 18 RF lighting devices.

4371. ARLB074 FCC adopts Universal Licensing System

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-17 00:00:00 UTC
From: w1aw@arrl.org
Message-ID: <$arlb074.1998@arrl.org>
Source record: 161638
Cross-posted to: rec.radio.info,rec.radio.amateur.misc

SB QST @ ARL $ARLB074
ARLB074 FCC adopts Universal Licensing System

ZCZC AG74
QST de W1AW
ARRL Bulletin 74 ARLB074
From ARRL Headquarters
Newington CT September 17, 1998
To all radio amateurs

SB QST ARL ARLB074
ARLB074 FCC adopts Universal Licensing System

Amateurs can say good-bye to the familiar FCC Form 610 series. The FCC has adopted its long- proposed Universal Licensing System, which will replace the Forms 610 with a new Form 605, the Quick-Form Application for Authorization in the Ship, Aircraft, Amateur, Restricted and Commercial Operator, and General Mobile Radio Services. Applicants may continue to use the old forms for six months after the new rules go into effect, however. An effective date will be announced when the FCC issues the official Report and Order.

The FCC also adopted proposals to permit automatic reciprocal licensing of foreign hams wishing to operate in the US, pursuant to recent international reciprocal operating agreements.

The FCC said the ULS will ''fundamentally change'' the way the Commission receives and processes wireless applications and makes licensee information available to the public. The rules adopted September 17 will--in the FCC's words--''consolidate, revise, and streamline'' license application procedures for radio services under the Wireless Telecommunications Bureau. The FCC last November began initial collection of licensee data to populate the ULS. Using the ULS, applicants and licensees will be able to file, modify, and renew electronically. Access to the ULS is via http://www.fcc.gov/wtb/uls/.

When the FCC first aired its ULS plan, some licensees expressed concerns because ULS registration would require applicants to provide a Taxpayer Identification Number, typically a Social Security Number. In its public notice, the FCC assured that ''all TIN information will be kept confidential.''

The FCC's action consolidates 40 existing forms into four ULS application forms, including the new Form 605. Electronic filing in the ULS will not yet be mandatory for the Amateur Service. Hams will have the option of filing electronically or on paper. However, electronic filing via the ULS will be required for Volunteer Examiner Coordinators in the Amateur Service. Mandatory electronic filing requirements go into effect July 1, 1999 or six months after the use of ULS in a particular service-- whichever is later.

An official Report and Order detailing the FCC's actions is expected to be released soon. The FCC's Public Notice is available on the FCC Web site at http://www.fcc.gov/Bureaus/Wireless/NewsReleases/1998/nrwl8040.html.

Hi:
Is there anyone out there that has some sort of
programming software for this radio.

I know that the radio is EPROM controlled and you
need the dedicated programmer from the manufacturers
but, if you remove the EPROM only instead of the
whole board I imagine that it can be programmed
with some software especially written.

Any comments or suggestions are apreciated

Alex Dampier

All the above is quite correct, with one exception. Propagation at 2m is
more reliable and covers further distance. This is basically because there
is less obsorbtion of the signal from trees, atmosphere, etc. This of course
assumes both setups (2m,440) are equal in power, ant, etc.

On the east side of Cleveland there is an AES, Amateur Electrinic Supply, store in Willowick.

A couple hours on the Interstates there is R&L in Hamilton, OH. They are north of Cincinnatti.

Bring a handheld along with you. You can get directions to AES on 146.88 (-600 and 110.9 tone) and 146.76 (-600 and 110.9 tone).

I'll be looking for you on 146.88.

73,

Hi Tom. There is a mod for the Kenwood, but I do not know it HOWEVER,
you should be aware that (according to several people I know who have
done it) it reduces the sensitivity of the regular 2 meter receiver. How
significant I can't say as they use them locally, but I would imagine if
they can notice a difference within normal 2 meter freq it must be
considerable.

4384. ARRL's ROD STAFFORD, W6ROD is full of BULLSHIT!

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-18 00:00:00 UTC
From: I
Message-ID: <6tve49$3c8@co-op.newsguy.com>
Source record: 161452
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.space,rec.radio.amateur.misc,rec.radio.cb

Looks like the last thing the ARRL Board of Fools wants
is to listen and carry out the will of the membership. The
Board conducted surveys of the membership and then does
the complete opposite. It makes me so sick I could just
vomit. HEY ARRL, you want to save money? You can quit
having elections since you won't truthfuly represent
your membership anyway. ARRL will destroy a good thing
if it means more money in their pockets.

Rod Stafford, W6ROD was shoveling Bullshit when he wrote:

>Thanks for your input about the ARRL's licensing
>restructuring and testing proposal adopted by the
>ARRL Board of Directors a couple of weeks ago in
>Connecticut. Let me see if I can shed some light
>on some of the reasons for the proposed changes.

(Translation: We dont give a damn about your input, only ours.
Sorry you wasted time filling out our survey.)

>I am certain that some hams will find change itself
>to be very disconcerting. It is our nature to like
>things the way they are and the way they were. We're
>generally comfortable with that and not comfortable
>with change. In many instances, we would like to return
>to "the good old days" of ham radio. However, there
>are some very real reasons why amateur radio has to make
>some changes if it is to be around in the 21st century.

(Translation: We need to make getting licenses easy.)

>As amateur radio operators, we're slipping farther
>and farther behind on the technology power curve, and
>people take note of that. Take a look at the primary
>modes of communication we use: SSB, FM, CW, etc. Each
>of those modes of operation have been around 50, 60
>or 70 years or more.

(Translation: We couldn't think of any new modern modes that
would be popular, so we couldn't submit any ideas
with our proposal. Hope No one noticed.)

>I was traveling by airplane not long ago and the
>person sitting next to me was a retired electrical
>engineer.

(Translation: Your dues bought my plane ticket. League
money working hard for you.)

>As we chatted I told him about my involvement with
>amateur radio. He had a ham license about 45 years
>ago. He was amazed hams still use SSB, let alone CW.
>He wondered why the hams didn't use some of the more
>"modern" modes of communications.

(Translation: Not surprising, they won't use modern modes eihther.
We know most Techs haven't and won't try
satellite or even packet!)

>This is a typical reaction. We have to change people's
>perception of ham radio being a pursuit involving 70 year
>old communication techniques. One of the ways to help
>change that perception is to modernize our approach to
>CW.

(Translation: We can heap Bullshit on the issue and say CW
strangled the institution of modern modes, and
CW is blocking technology.)

>We're not eliminating it, we're simply trying to put it
>in its proper perspective as we move into a new century.

(Translation: Are we bold enough to propose the total
elimination Of CW? No, but our proposed new
easy licenses will still please thousands
Techs, CBer's and other non-hams. We'll gain
their favor, and memberships.)

>CW will be around for a very long time as one of the
>modes of communication for amateurs. However, as
>an examination element, it carries much more weight than it
>should at the present time.

(Translation: We're losing membership dollars because many
potential members reject learning CW and won't
join us unless they can have HF for free. We
hear their cry.)

>I believe the League proposal will put CW into a more
>proper perspective in the examination context as we try
>to bring amateur radio into the current technological
>environment.

(Translation: Hope we can fool our grass roots support, old timers,
and pro-code League members with this Anti-CW Bullshit
membership drive technology rhetoric.)

>I don't think there are many people who see CW as the
>future of amateur radio. If they do, in my opinion they
>are looking backwards, not to the future of ham radio.

(Translation: Pro-coders are backwards and their arguments
interfere with our membership drive.)

>And, as I mentioned, we're not eliminating CW. There
>will be plenty of people operating CW just as they have
>for years.

(Translation: We want to eliminate CW, but our life members
would die of shock. We'll call for the total
elimination of CW in our next proposal.

>Most non-hams think of ham radio as a hobby. And as a
>matter of fact, most hams think of amateur radio as a hobby.
>Sure, the League tries to stress the emergency communications
>and the public service aspects of amateur radio to those that
>are unaware of that role and people outside of ham radio do
>have some understanding of that role of amateur radio. It is
>certainly one of the first things I tell people about amateur
>radio if they have no acquaintance with the amateur service.
>However, the bottom line is we're viewed as a hobby.

(Translation: Maybe we should mix in some truth with the Bullshit.)

>The point is, we have some very valuable spectrum that is
>available to us for hobby purposes, and yes, even for our
>public service activities. It has become more and more
>difficult in recent years to justify retaining our spectrum
>from commercial interests who make some very good arguments
>as to why they should be allowed to use our spectrum for
>endeavors that will generate jobs, used advanced telecommunications
>techniques and put the spectrum to use for commercial purposes,
>not just for hobby purposes.

(Translation: Hope the commerical companies seeking spectrum
will believe us when we say ham radio will get
more technological and that we're not just
spreading more bullshit.)

>Even considering the perception that what we do is a "hobby,"
>we can counter some of that perception that we're "a dying breed"
>clinging to old technologies when we can show that amateur radio
>is a vital, growing activity. One only has to look at the statistics
>in the last few years to find that to be untrue. In recent years
>the average age of a active ham has crept up to nearly 60 years old.
>The growth rate of new hams coming into the service is at an
>all-time low of less than 2%. That doesn't even keep up with the
>"loss rate" of people who die or simply leave amateur radio for
>various reasons. The argument that we need to retain spectrum for
>the growth of amateur radio in the face of dwindling numbers is an
>unconvincing one to anyone, like the FCC and commercial interests,
>who takes a moment to look at the numbers.

(Translation: If we don't get new hams we're going to have to
swallow a decrease in our salaries. We can all

have raises when all those CBer's come on board
with the new easier licenses!)

>Taking these factors into consideration, the perception of ham
>radio is one of an aging group of hobbyists who use "less than
>state-of-the-art" communication techniques. We may not like that
>perception but that is what it is in many circles of the
>communications industry.

(Translation: Guess improvements in transmitter & receiver design
and DSP don't count as state-of-the-art if the
transceiver is sending CW!)

>The changes proposed by the League are not the total solution to
>the problem. We still have to make an effort to move into more
>advanced communication techniques in the near future. We need to
>take advantage of some of the more cutting edge modes of digital
>communication to allow for more efficient use of the spectrum.
>The Board of Directors is aware that merely restructuring license
>classes and modernizing the CW testing requirements is not the
>whole answer.

(Translation: If we must destroy ham radio to save it, then we'll
do it! Our jobs are at stake!)

>The League is going to have to take the lead in promoting
>technological advances within amateur radio even if it is just
>stressing the idea that amateurs put to use in amateur radio some
>of the techniques used by the commercial services.

(Translation: We can't promote technological advances now because
that darned CW mode keeps getting in the way.)

>And it's not just the League that needs a different mindset to get
>us into the next century with a vital amateur radio. For example,
>we might persuade repeater coordinators to give priority to
>sanctioning repeaters that are going to be using advanced digital
>modes rather than the 50 year old narrow band FM mode.

(Translation: Hmmm, We still can't figure out how to get hams to
accept the current new modes. We'll just say we're
working on it.)

>We might even persuade radio manufacturers to market HF radios that
>use other modes than CW and SSB as the primary modes of communication
>below 30 MHz. There are digital techniques that can be applied to
>the amateur service that would make more efficient use of the
>spectrum and minimize the interference potential between stations.

(Translation: We know a CW signal takes less bandwidth than other
modes, but we'll throw out this bullshit that there
might be other modes that are more spectrum efficient
than CW and see if anyone buys it!)

>I suppose the bottom line is we in amateur radio have to start
>thinking about the future and where we want amateur radio to be
>in the future.

(Translation: If our ham bands sound like CB channel 19, who cares?
At least we'll have more members.)

>Changes within ham radio have been suggested for quite a number of
>years. The pressure for change has been building. The FCC has had
>a continuing stream of proposals from individual amateurs to make
>significant changes over the last ten years or so. The League, for
>various reasons, has resisted such change, myself included. However,
>I think the proposal the League recently adopted will move us as
>amateurs in the direction we need to be going.

(Translation: Just send in a FCC 610 form for a Ham license. No
test required!)

>I also have to make a comment about the "motives" of the members of
>the Board in making such a proposal. Some have said the move was
>to make sure more radios were sold. Some have said it was to
>attract more members to the League. I can state without any
>hesitation that the Board acted in the best interests of amateur
>radio and for no other reason. Most all of the members of the Board
>have been amateurs for 35 years or so and some even much longer.
>These are not people who want to see amateur radio be hurt in
>any way. They don't spend 30 or 40 hours a week working on amateur
>radio matters for anything other than the benefit of amateur radio.

(Translation: We're concerned about our pocket books, and are as
crazy as Wayne Green.)

>I don't think there is anyone on the Board who cares how many radios
>Yaesu, Icom or Kenwood sell. Those companies are involved in other
>commercial activities and the amateur radio segment of their business
>is not large to begin with in the context of their entire commercial
>enterprise. If one or more of those companies should leave the
>amateur radio market, some other company will fill the void and market
>amateur radios. Of course, that assumes there is an amateur radio
>service.

(Translation: They'll pay us lots of Dollars to advertise in QST.)

>The League would certainly like to have more of the amateurs as
>members.

(Translation: But CBer's are just as acceptable.)

>I certainly don't dispute that. But that doesn't mean it
>will benefit any person on the Board if the League has additional
>members because we are volunteers to begin with. We don't get paid
>and we certainly don't get any bonuses if additional members join
>the organization. It actually means the League can provide more in
>the way of services to the members more than anything else.

(Translation: Our easy license proposal will make thousands of CBer's
feel welcome.

>The changes proposed by the Board are needed. Other changes along
>the lines that I mentioned are also needed for the amateur service
>to continue to be a growing, valuable service.

(Translation: More mindless Bullshit! We haven't a clue.)

>I would hope that you would consider these factors in assessing
>the need for and the effect of the League's proposal. There's no
>reason the changes are being suggested other than they are needed.

(Translation: With our proposal ham radio as we now know it will
be dead in five years and our ham bands will sound
like CB.

>I have resisted engaging in any debate about the pros and cons of
>CW and how it is or is not a filter for "quality" amateurs getting
>on the HF bands. There are plenty of people who will spend hours
>and hours debating that subject. I don't. Not only that, it misses
>the whole point of why the Board suggested the changes it did. If
>you have an urge to do that, I can suggest some internet newsgroups
>where that debate has been raging for years and with no satisfactory
>conclusion I might add.

(Translation: I won't argue with the hams who want the best for
ham radio, they always win!)

>Incidentally, I have drafted this response to send to a number of
>individuals who have written or e-mailed me on the subject of the
>restructuring and testing proposal so if a ham friend says he
>received the same response or it appears in electronic form
>somewhere, that is the reason.
>

>
While I know that 3950KHz is shortwave, and that some SWLers might
listen there, this thread really belongs in another newsgroup.
How about all the "Liberty Net" friends and foes take this to email,
contact the FCC or just go get a copy of the starr report and retire
to the pprivacy of there bathroom and leave the rest of us alone
tpo listen to shortwave, trade ideas on receivers, antennas propagation
and teh future of SW. There I times I wish the FCC would just give all
of the ham allocations to any other group. They gave away 11Mtrs and
took most of 220 so maybe there is hope.
I thought this was rec.radio.shortwave with the interest in real
shortwave instead of the actions a few disturbed individuals.
This is why I am no longer active in ham radio. My license "expires"
in November and I have a major problem in coming up with ANY GOOD
reasons to renew it. And I thought that it was just a local "repeater
god" problem.
Sorry to waste the bandwidth but sometimes I just want to scream!

ME

4387. Selling ham radios for use by non hams

Newsgroup: rec.radio.amateur.misc

Here is something I found thats interesting. There is a company in
South Africa that sells stuff the hang gliding pilots. One of the
things they sell to these people are radios. The link says 'kenwood
FM radios'. I click on it, and its the Kenwood TH-22A! A 2M radio!
Nowhere on the page does it say *anything* about being an amateur,
having a license, or anything. I guess maybe you don't need a license
over there? Either way, selling amature products for non-amatuer
use is probably not good. What do you think?

The URL of this company is http://www.apco.co.za

Already happening, bit-by-bit. Commercial users will soon be dominant on the
current ham allocations above 50Mhz.

I have really missed Woger Wabbit these past few days. Arguing with him is really the only pleasure I get from life, since I'm forced to live with a fat black woman who kidnapped me and forced me to marry her.

Don't get too worked up about this, the advertisement says .. * Frequency range depends on region. In South Africa the ham band for 2 metres is only 144-146 MHz, unlike in the USA, so some frequencies outside this covered by the radio is part of the air-band and no doubt one can get authorisation to use, especially as a hang gliding pilot.

Having lived in that country for 24 years I can also say that the ham radio league is very well established and have their hobby under control, not to mention the authorities which are very disciplined when it somes to licensing and maintaining standards, which is something I have not always seen in some of the other countries I have lived in.

Hi there one and all..

The name here is Colin and the call is VK2TRC. I will visiting the US in December this year and be staying for about 6 weeks.

I have contacted the FCC re a licence and that should be no problem. What I am having a problem finding is an up to date repeater listing for the US.

Any clues as to where I can find such a list on the net?

Regards and 73's from downunder

A lot of vhf ham gear is not actually ham gear at all, the radios can be
easily retuned to cover a broad range of other services. There are plenty
of what we consider "ham" 2m vhf radios being legally used on the 162Mhz
marine band in this country. Which is good for us because it creates a much
bigger market for such radios and keeps them available and affordable via
volume production.

If by "taking care of it" you mean the vigilante hams committed felonies,
that makes them no better (and maybe worse) than the freebanders. If you
mean that the hams gathered evidence for the FCC, then it is the FCC
who "took care of it". I'd be interested to know the details. If hams
can do something legally, please share the knowledge.

It was tried the last time he was in prison. See how much good that did
didn't you? Now that he has a local audience, in the form of a bowling
pin with legs, he can set up schedules and rotate between playing tapes,
and letting the bowling pin scream into the mic.

SB PROP @ ARL $ARLP038
ARLP038 Propagation de K7VVV

ZCZC AP38
QST de W1AW
Propagation Forecast Bulletin 38 ARLP038
From Tad Cook, K7VVV
Seattle, WA September 18, 1998
To all radio amateurs

SB PROP ARL ARLP038
ARLP038 Propagation de K7VVV

Solar activity was down last week, with the solar flux dipping below 120, where it has not been since August 4. The average solar flux for the previous 90 days rose from 125 to 126, and the daily flux was above this level on four out of seven days. There were no major flares or geomagnetic disturbances, and the most unsettled day was September 12 when the planetary A index was 12.

Solar activity is rising again, and the solar flux forecast for this Friday through Sunday is 130, 130 and 135, and the predicted planetary A index is 10, 10 and 12. Beyond this weekend the solar flux is expected to rise above 140 around September 23, and peak around 150 from September 25 through 29. Geomagnetic conditions should be disturbed around September 21 through 25, with the worst conditions centered around September 23. This is due to a recurring coronal hole and a resulting high speed solar wind, and it may be a good time to check VHF bands for auroral propagation.

Looking further into the future, a recent NOAA Space Environment Center prediction shows the smoothed solar flux running about 40 points higher a year from now, and solar activity peaking around spring, 2000. This places the peak only about 17 to 22 months away. Currently 15 meters is considerably better than it was a year ago, with good daytime propagation. 20 meters is the best band all around, with good propagation into the night. 10 meters should be improving considerably this fall, and finally opening on a regular basis.

On VHF, W5UWB in Texas worked LU2DEK in Argentina on six meter SSB over a transequatorial path on September 16 at 2154z.

Good news regarding the SOHO observatory. At one time it didn't seem possible, but SOHO is currently pointing at the sun again and

obeying commands from ground controllers. Now that it will have a chance to charge batteries and warm propulsion systems, the next step is an attempted recovery. Check SOHO progress on the web at http://sohowww.nascom.nasa.gov.

Sunspot Numbers for September 10 through 16 were 123, 134, 118, 111, 106, 71 and 86 with a mean of 107. 10.7 cm flux was 141.7, 138.6, 134.9, 130.7, 121.8, 117.3 and 118.7, with a mean of 129.1, and estimated planetary A indices were 5, 5, 12, 6, 6, 7, and 4, with a mean of 6.4.

>

In most parts of the country, there are more 2m repeaters than 440 so as a general reply, 2m would be better for repeater use. If there is a goo system of 440 repeaters in your area, its a toss-up

Either would be fine for simplex.

There are many dual band radios on the market today that are just a little more expensive than a mono band HT. Generally, the low price dual bands operate on one band or the other at a time. But, it gives you the best of both worlds.

The low price dual banders are in the $300-350 range, vs $250 to $275 range for a monobander. A full, all-the-bells-and-whistles dualbander runs around $500.

That's the direction I would go.

Chuck, KE4OAR

That was HYSTERICAL !!!!

I bet when he gets CBdumbo and TheLibNut in the car on a rainy night they
think it's like being in the prison showers together again!!

I wonder which of them "Drops The Soap" first ????

```
Hello

61 flights in 59 minutes
From 0202 to 0301 UTC
Listening to only 3 frequencies: 5616, 5598 and 6628 KHz
Excellent signals

This give aprox 1 flight/minute and a very very busy airspace:
have a look at the following Screen Shot done with AirNav and you
will have a complete "Radar View" of the North Atlantic airspace at that
time:

http://www.geocities.com/SiliconValley/Lakes/9420/shotex7.gif

Really hope you enjoy the log.

Best regards, Andre Brandao

For sale a like new condition FT-1000 HF tranceiver. This like the D model
but without BPF-1. Comes with hand mic, manual, original box. Rig has
latest firmware and has been check by Yeasu. Perfect working condition. No
blemishes except for a very thin line scratch on the bottom right rear
corner. It is about 1.5 " long. This was caused by pulling the rig in and
out of a tight space on the desk. Non-smoker owner. For specs and picture
of this model, click here:
http://www.yaesu.com/ft1000.html
Sale price: $1995.
If interested, either E-mail or call (310) 649-2226.
73,
Duke

And if accomplishing something on your own is possible then you are very
right to do so and should be given every credit for so doing. The few
that get some MD to sign off on waivers when the only thing wrong is
```

maybe one leg an inch short or one eye impaired do themselves and the system a disservice. The MD, knowing what the waiver is for, should loose his license for a time.

Many people have some disability, but not one that prevents them from accomplishing the Morse requirments. A Waiver is supposed to address only those disabilities that preclude OOK learning and operation.

Take care Stan.

From: Harris Maulden <n5qje@flash.net>
Message-ID: <3602B422.6346F6A6@flash.net>
Source record: 161586

Anyone out there know of any mods available for the new little 350mw handhelds from Alinco on the DJ-S11 2meter and the DJ-S41 UHf radios? Sure would like to open up the receive range atleast. There tight.

If anyone has the Standard 510a small dual band 1watt HT, I have the mode for it. Real easy, just lift off one surface mount chip jumper, reset and it opens up rec & xmt.

Thanks, Harris - N5QJE, Pearland,Tx

Kenwood anounced over a year ago that they would start making some of
their radios available at truck stops and other places.The ham community
threw a small fit but I think Kenwood ignored us.
One of the most infamous purveyors of illeagal CB radios and
amplifiers,Candyman electronics (last year he was charlie 3 electronics
and he is a ham) had listed in his latest catalog a very large line of
Kenwood VHF AND HF radios with no mention of a license but comments
about the Kenwoods out of band capabilities. AB7RS

Richard, if this is a certain "Cecil" I remember from the past he indeed
cares very much about ham radio...and is also a heck'uva antenna tech. Of
course, it might not be the same one...remember, though that everyone has
opinions.

Mike

4427. Timewave's new area code is not enabled everywhere!

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-19 00:00:00 UTC
From: rgawtry@timewave.com
Message-ID: <36033f73.0@news2.minn.net>
Source record: 161459
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.misc

The response to Timewave's new PK-232/DSP upgrade kit for the PK-232 has been outstanding, but some people have had difficulty reaching Timewave by telephone because of the new area code (651) assigned to the St. Paul, MN area. Some telephone switching centers (including some major telephone companies, cell phone companies, and some private companies with call restriction by number) are not programmed to accept the 651 area code. You may even be told the 651 area code doesn't exist! If you have this problem when you dial 651-222-4858 to get Timewave, just use the old St. Paul area code - 612-222-4858.

Upon some investigation of this problem, we found that it is a common problem around the country as new area codes have proliferated. One parent couldn't call his son at college for two months! If you have the problem, talk to your phone company service department or to your company telephone system administrator. Some companies are very uncooperative and others fix the problem within a few hours.

73,
Randy Gawtry, K0CBH
Timewave Technology Inc.

The best that can be said is better than the worst that should be said. I wish to proffer a "Digital" salute to the less than intellectual Dimwits who lurk about this news group. A "digital" salute is pretty much self explanatory...it needs no explanation unless the intended parties suffer from a mental disability. Save your monies, Kids....go to the local liquor store and get a money order....keep your rent up to date.
Life is short...housing is hard to come by when you are in debt to so many and have legal bills with which to contend.
It must be difficult to balance the wife's monies between paying overdue bills and attorney fees....one must balance the income versus the outgoing at the local booze store....tough call! I would surmise that repairing the family car must fall somewhere in the least of these priorities. After all, what is more important...a window or a twelve pack?

*** C O M P U T E R S O F T W A R E F R A U D A L E R T ***

********** DEFECTIVE COREL SOFTWARE EXPOSED **********

======================================
THIS IS A NON-FOR-PROFIT PUBLIC SERVICE
======================================
TO ALL COMPUTER USERS
======================================

But first, a preliminary First Amendment statement:

We have previously posted similar messages to various newsgroups concerning dysfunctional computer hardware and software, whereupon a deluge of protests were filed with the administrator of my Internet Service Provider, demanding I be removed from said Provider's system, and therefore, from the Internet.

I was accused of ���SPAMMING��� the Newsgroups.

Oh yes, don't we all love that word {{{ SPAMMING }}}??? It has now become fashionable that whenever we disagree with another's perspective, it AUTOMATICALLY becomes ���SPAM���. I refuse to be dragged down to the depths of illiteracy for an in-depth discussion of what constitutes {{ SPAMMING }}.

Very briefly, however, anyone who believes that a message header, which accurately describes the content of the actual message, thus represents SPAMMING, has lost touch with reality. This approach is nothing short of intellectual fraud, or worse, and represents an agenda far more fiendish than spamming.

There is NOTHING MISLEADING in this message header you just clicked on. In case you've already forgot, go back to the main message board and read it again.

The content of this message will be confined to my own personal experience with Corel products, and yes, I CAN PROVE the dysfunctional quality of the product complained about herein.

If any patron of this newsgroup does not like this message, you need ask yourself but one profound question:

**** WHY DID YOU CLICK ON THE MESSAGE HEADER TO BRING THIS MESSAGE TO YOUR SCREEN if, in fact, this subject was OF NO INTEREST TO YOU ????? ***
The length of this message is brief, same contains no viruses, bombs, or ballast material.

If the reader disagrees that the product discussed herein is NOT dysfunctional, or the topic of defective computer software/hardware/gadgets + gizmos is not relevant to the basic theme of this newsgroup, then why not try setting aside your dictatorial, ill-mannered, MARSHAL JOSEF STALIN MENTALITY and simply skip this message? This guarantees YOUR constitutional rights, and MY constitutional rights at THE SAME TIME, does it not?

If the reader feels posting a message about computer software and hardware is not germane to the underlying theme of this newsgroup, please consider how anyone could possibly read this message without using computer hardware and software products. Since this message relates DIRECTLY to the very devices used to access this information, where does the objection of ��irrelevant�� material find credibility? Yes, it�s irrelevant, only within the framework of the readers personal bias and prejudice.

It is nothing beyond a ���SUBJECTIVE��� issue as for whether this posting is irrelevant to this newsgroup. A complainers opinion, or that of the newsgroup moderator, is argumentatively no better than mine, or someone else.

If homosexuals have rights, if child abusers have rights, if feminists have rights, if murderers have rights, if left-wing socialists have rights -- then I, too, have rights, and I therefore issue the following warning to anyone who attempts to abridge, in any way, my CONSTITUTIONALLY GUARANTEED RIGHT to post this message on this (or any other) newsgroup:

I HAVE SECURED NOT ONE ATTORNEY, BUT AN ENTIRE OFFICE FULL OF ATTORNEYS, WHO�S SPECIALTY IS DISCRIMINATION, AND OTHER SIMILAR CASES INVOLVING FREE SPEECH, WHO WILL BE BROUGHT INTO ACTION AGAINST ANY NEWSGROUP MODERATOR/OPERATOR, READER OR ISP THAT ATTEMPTS TO LIMIT MY OPPORTUNITY TO POST MESSAGES TO THIS, OR ANY OTHER NEWSGROUP, PROVIDED SAID POSTINGS ARE FREE OF BOMBS, VIRUSES, FRIVOLOUS CLAP-TRAP (ELECTRONIC BALLAST--I.E., WASTEFUL DIGITAL BYTES), MISREPRESENTATIONS, PROVABLY FALSE ASSERTIONS, THREATS, HARASSMENT, OR VIOLATIONS OF APPLICABLE COUNTY, CITY, STATE OR FEDERAL LAWS.

THE FOLLOWING POST VIOLATES NONE OF THE ABOVE LISTED EXAMPLES OF IMPROPER MESSAGE CONTENT, WHICH COULD, IN ANY WAY, BE CONSTRUED AS ����SPAM���� OR OTHER LEGAL IMPROPRIETY.

Harass me, violate my Constitutional rights at your own peril.

Now, on with the message - - - - - - - - - -

****

********** DEFECTIVE COREL SOFTWARE EXPOSED **********

HERE�S A TIP TO HELP YOU AVOID SOME FUTURE GRIEF (AND SAVE SOME OF YOUR HARD EARNED MONEY)

PC World Magazine, in their February issue made reference to a particular software title as

�THE SOFTWARE FROM HELL�. (the reference here was to MS Internet Explorer).

Personally, I have never used this product so I can�t comment about it.

Nevertheless, {{ IF }} PC World had been talking about software from

COREL CORPORATION (Word Perfect, etc), it would have been MOST APPROPRIATE.

However, the phrase, "software from hell" is not copyrighted. Therefore, I have just

as much right to refer to Corel software products in the same manner, as my own personal experience verifies such a description.

INDEED, COREL'S WORD PERFECT FOR THE MACINTOSH TRULY DESERVES THE TITLE

****** S O F T W A R E F R O M H E L L ******

because it is buggy (and dysfunctional) beyond belief.

YOU CAN'T READ INFO LIKE THIS IN THE COMPUTER MAGAZINES BECAUSE COREL SPENDS FAR TOO MUCH MONEY VIA ADVERTISING REVENUE WITH ALL THE COMPUTER PUBLICATIONS. THUS THEY DON'T DARE EXPOSE ONE OF THEIR BIGGEST ADVERTISERS, FOR REASONS WHICH SHOULD BE OBVIOUS. THEREFORE, WE CAN ONLY HOPE TO PASS THE WORD VIA NEWS GROUPS AND SIMILAR OUTLETS ACROSS THE INTERNET.

Corel Corporation, a Canadian firm, based in Ottawa, Ontario, has zero regard and zero respect for their customers, and is probably the best example of why Ziff Davis Publishing Company, Inc., (publishers of dozens of computer magazines, both on the PC and Mac platforms), are now calling for a mandatory (and legally binding) 30, 60 or 90 day software money back guarantee for all computer software.

In case the reader is interested in more details about the Ziff-Davis proposals for increased accountability for consumers of the computing segment of the marketplace, I offer the following URL's:

http://www.zdnet.com/anchordesk/talkback/talkback_79464.html

http://www.zdnet.com/wsources/content/0298/fob_setup.html

Using data from Corel's own website, the following is more than sufficient proof to demonstrate the dysfunctional character of Corel's Word Perfect product:

THE FOLLOWING BUG LIST IS TAKEN FROM COREL'S WORLD WIDE WEBSITE:
==========

ftp://ftp.corel.com/pub/WordPerfect/wpmac/-WPMac ftp Index.html

(scroll way down, almost to the bottom)

What follows is the list of bug fixes initiated by Corel in an attempt to repair their cockroach infested product known as Word Perfect, version 3.5, the following details of which can easily be construed as a clear admission of bugs which existed with version 3.5 as shipped to customers on CD ROM. What makes this issue all the more criminal is the fact that Corel refused to inform customers who sent in their warranty registration cards that bug fixes had been released for this product. Corel Corporation refused to send warranty/registered customers the patches on floppy disk, and if this was too expensive, Corel Corporation even refused to send registered customers a postcard informing their customers where they could find the patches on the Internet.

Customers were simply left to struggle with a totally dysfunctional product. And customers like myself who finally figured out Corel Word Perfect could NOT be made to function properly, and who first requested assistance, were ignored, and when a refund was requested, were ignored again.

TO THIS DAY, 21 MONTHS AFTER THE PURCHASE OF THE DYSFUNCTION AND COCKROACH INFESTED COREL WORD PERFECT PROGRAM, THIS COMPANY CONTINUES TO IGNORE ALL INTERNET E-MAIL MESSAGES AND ALL UNITED STATES AND CANADIAN POSTAL SERVICES LETTERS.

==========

Corel Document ID: 10339

The information in this document applies to:
WordPerfect 3.5 for Macintosh

This Updater works with all versions of Corel WordPerfect 3.5. Including: Novell WordPerfect 3.5, Corel WordPerfect 3.5.1, Corel WordPerfect 3.5.2 and Corel WordPerfect in the CorelDraw Suite.

The Corel WordPerfect 3.5.3 patch replaces all previous patches for WordPerfect 3.5, including the Corel WordPerfect 3.5.2 patch shipped in October of 1996.

Fixes in 3.5.3 patch
==========

- Conversions should now function normally under System 7.6.
- A bug was fixed that repairs some display problems.
- Sporadic warnings that the common library could not be found will no longer occur.

Fixes in 3.5.2 patch
==========

- Text Selection now works properly.

- The Print Envelope feature will print addresses in the correct position on the LaserWriter 8.4 printer driver.

- Deleting to the right at the beginning of a line will no longer cause the cursor to reposition incorrectly in the text above.

- Deleting just before a Style no longer causes the cursor to reposition incorrectly and delete text within the Style.

- Editing a document in ?Show Codes? no longer causes the cursor to reposition incorrectly.

- Headers/Footers with text attributes (bold, underline...) are no longer affected by text attributes that cross a page break.

- Deleting addresses in the Print Envelope delivery or return address window now functions properly.

- The German Dictionary no longer stops and marks incorrect every word that contains a ? (esset).

- The French Dictionary on a Power Macintosh no longer stops and marks incorrect words that contain a ? (acute).

- Delivery Point of a bar code is no longer automatically calculated.

- Import of tables from various document types has been improved.

- The title of the ?WP6.x Export? now reads ?WP6.x,7.x Export? in both the patched and resale CD product from Corel.

- HTML export now saves Corel WordPerfect graphics or .wpg formatted images as JPEG?s.

Fixes in 3.5.1 patch
====================

- Editing some long blocks of Japanese characters will not crash the computer.

- Screen display is faster after scrolling through large documents or tables, or making editing changes.

- Captions can now be positioned above a graphic or text box.

- Return and delivery addresses in Print Envelope will now allow 255 characters (including line breaks).

- Dictionaries are now listed under the Dictionary menu instead of the Check menu.

- Ruler Bar display problems with PCI Power Macintosh computers have been fixed.

- WP 6.x and WP 7.x conversions can now be canceled.

- While working in subdocuments?such as headers or footnotes on black and white screens, Corel WordPerfect does not quit unexpectedly when clicking in the ruler area of the subdocument.

- Zip codes beginning with zero which did not have extended zip code digits now function properly in the Print Envelope feature.

- Font menus in Preferences and Print Envelopes now work properly on small monitors.

- Cleared tabs will no longer unexpectedly reappear on the ruler.

- Hyperlink copy and paste are now working.

- Cell Protection now disables the deletion of the contents of a cell.

- The bottom border of a table which crosses a page break is now visible.

- Patterns in a cell will no longer disappear when performing a Split or Join.

- Joining with the first cell of a table now functions properly.

- Row selection of tables in a text box is now available.

- Scroll bar does not stick when scrolling.

- Page Setup is now enabled in the Print Envelope feature (this allows the selection of paper sizes and envelope trays).

- Changing QuickCorrect preferences with no documents open will no longer crash the computer.

- Tables and Page Borders now work together.

- The PowerTalk Mailer can exceed 4096 characters.

- In the new Corel WordPerfect 3.5 CD-ROM, Norton Utilities will no longer report an error in the WordPerfect Installer Read Me. This fix is not available in the patch, but if you use Norton Utilities, we suggest you delete the WordPerfect Installer Read Me since it is not required for proper operation of the software.

- Corel WordPerfect Dictionaries and QuickCorrect word lists will no longer be replaced during installation.

THIS CONCLUDES THE COPY AND PASTE OF INFO FROM COREL&#65533;S WEBSITE.

==========
==========
==========
==========

Postscript--------------------------->

The above represents the bug list for Word Perfect 3.5, as I purchased this product, these revelations coming directly from Corel&#65533;s website. Considering all these problems, it is little wonder that Ziff Davis Publishers are now suggesting we have a SOFTWARE LEMON LAW to protect computer consumers from future issues of this sort of software larceny.

If the reader will examine the websites of PC Week, PC World, and a few other leading PC-platform computer magazines, he will discover that Corel's Word Perfect, Suite 8 (the latest offering from Corel) is likewise full of bugs. Don't take my word for it--- check it out for yourself.

MORAL OF STORY ---------->

SAVE YOUR MONEY--- DO NOT BUY ANYTHING WITH ���COREL��� ON THE LABEL, WHETHER IT BE FOR IBM COMPATIBLES OR THE MACINTOSH.

Many readers will complain that THEIR experience with Corel Word Perfect has been excellent, that THEIR version has caused no problems. Fine, I will not bother to argue the point, and concede the truthfulness of another's opinion and/or experience.

Nevertheless, when a producer, such as Corel or any other computer vendor, can post, at their own website, information which clearly admits to product deficiencies, but then refuses the customer a refund, when requested, exhibits the most loathsome expression of contempt for their consumers. Companies who respond to consumers in this manner deserve this style of treatment. They should be the object of consumer boycotts.

At issue here is not the extent or degree of product failure, but Corel's total indifference to consumer feedback. With many reputable sales outlets in America (I will list no one by name, for obvious reasons) the motto is, as it has been for decades, "SATISFACTION GUARANTEED OR YOUR MONEY BACK".

How many computer software vendors can each of us recall who cheerfully offered computer users "SATISFACTION OR YOUR MONEY BACK" as an expression of confidence in their product? You can't think of any? Neither can I. Perhaps now you understand the reason for this posting.

Thank you for reviewing this post.

John Wiesenmeyer (and that IS my real name, not some phony alias as so often is done with newsgroup postings).

greetings

I know a lot of amateurs are into computers and accessories.

I am tring to put together, design, a ups for my computers and radio equipment, two separate units.

I have some sla batteries and can build a power supply to keep them charging/charged.

My question is concerning the method of converting the 12 volts battery power to 120 vac. How is that done? I have a few ideas but they are based on my imagination rather than seeing actual circuits. For example, is the resultant 120 V, frequency 60hz or something else, I would guess it would be much higher.

I just received this via e-mail and thought I would pass it along.
I think it's time to stop going on about code/no-code and so on.

Include original message from Khalil K6FCC

Dear Fellow WARC members/hams:

I feel I must inform you of the following:

Khalil K6FCC

I am trying to be a good ham and stay out of "trouble" but:

On Sept 16, 1998, at approx 4:30 pm PDT, I returned to my home to find my amateur radio antennas brutally vandalized and destroyed. Pieces of my antennas were dangling off of the roof and certain parts were found on the sidewalk in front of my condominium building.

After several enquiries, I discovered that the members of my homeowners association in conjunction with the management company willfully committed this act. The Vice-President of the my homeowners' association told me " The Homeowners' group was acting on direct orders of Los Angeles City Fire Department (LAFD) Capt. Randall Judd, and Fireman Charles R. Palacios (both are at Fire Station 092) who told them that it was in the public interest to commit acts of vandalism against amateur radio operators by destroying their antennas".

I am a member of several volunteer organization engaged in the business of handling emergency and health and welfare traffic for law-enforcement, fire departments and the United states military among other groups.

The Los Angeles City Fire Department has now officially gone on record with the position that amateur radio operators and their antennas are a direct hazard to public safety.

Is this the end of amateur radio as we know it ?

Should amateur operators stop all community activities because their services are no longer needed ?

I will let you decide..

First, did the association ever give you notice to take these down?
Did the LAFD? Did they destroy your property with no notice or
permission at all? If so, you might report it to the police, the
normal procedure when someone destroys your private property.
Then go get an ARRL VC and get some advice. From what is described,
it is nonsense, and needs to be straightened out.

It has to be 60 Hz because some computer cooling fans use
synchronous AC motors, and they wouldn't be happy at all with
high frequency power. Some monitors are transformer input
too. It doesn't have to be pure sinewave 60 Hz, but that's preferred.

A switching circuit is used which gives a stepped approximation
of a sinewave, and at minimum that's filtered a bit to clean up the
switching transients, at most it feeds a ferroresonant transformer
and comes out clean as the driven snow.

A modified sinewave can also be used, but that's a bit nasty and
makes some equipment a bit unhappy. A modified sinewave doesn't
look at all like a sinewave on a scope, but it has the same peak to
average ratio, and that's sufficient for most equipment.

My daughter called our fone company, US West, to get voice mail.
We live in area code 651, but was told that there was no 651 when she
was asked for her fone number. She explained to the sales person that
this will be our new area code in Jan 99.

We have been told to practice using it now, in order to get used
to it.
FYI- The twin cities got divided up. Minneapolis is 612 and St.
Paul is 651. We can still dial each others city with out area code
until Jan.

If I wanted to build a power supply of about 10 to 20 amps,
where would I look for a transformer? The only transformers
I have been able to locate are for alot lower amperage. Also
does one get a transformer with the idea of putting several in
parallel? I don't mind buying a supply from Astron but was
thinking that building one might be fun.

Please email replies to:

> (Khalil Ladjevardi)

I know Khalil and he is a very nice man. There can be no doubt WHATSOEVER as to his dedication to the community at large and to the men and women of public safety in particular. Please let me make that perfectly clear.

The situation that Mr Ladjevardi finds himself in is certainly unfortunate. At this time, his course of contact and complaint is specifically with his Homeowner's Association, and if he feels wronged (directly or indirectly) by a City Employee - the City Attorney's Office. I have offered him contacts for the latter, and frankly do not know the status of his inquiry or negotiations.

Khalil specifically wrote...

> The Los Angeles City Fire Department has now officially gone on record
with
> the position that amateur radio operators and their antennas are a direct
> hazard to public safety.

It is clear that Khalil is incensed that his property suffered damage. I

certainly have no quarrel with that. None of us stand for having our hard-earned goods damaged or destroyed. I think it important however, for the reader to review Khalil's statement:

>....I discovered that the members of my homeowners
> association in conjunction with the management company willfully committed
> this act.

I offer this only to the many of you who somehow surmised that the Fire Department had gone and torn down the antennas. That is NOT the case, nor does Khalil infer it to be.

Khalil is a calm and logical person, so it is apparent (to me at least) that this situation has aggravated him immensely.

Please let me return to another statement:

> The Vice-President of the my homeowners' association told me "
> The Homeowners' group was acting on direct orders of Los Angeles City Fire
> Department (LAFD) Capt. Randall Judd, and Fireman Charles R. Palacios (
> both are at Fire Station 092) who told them that it was in the public
> interest to commit acts of vandalism against amateur radio operators by
> destroying their antennas".

Please note that this is a quoted statement (and possibly the opinion of) the VICE PRESIDENT OF HIS HOMEOWNER'S ASSOCIATION [emphasis added]. I know of
no such statement by any of our members. The Vice-President of his HOA does not speak for the LAFD!!

Most distressing however, is (Khalil's understandable opinion), which many of you took as "fact" or even "current LAFD policy". See below.

Khalil wrote...

> The Los Angeles City Fire Department has now officially gone on record with
> the position that amateur radio operators and their antennas are a direct
> hazard to public safety.

I'll let that statement speak for itself. With no disrespect for Khalil, I

feel that members of the Amateur Radio Community are astute enough to determine whether or not we have categorically and "officially" declared (and I quote his quote):

>amateur radio operators and their antennas are a direct hazard to public safety

Anyone who knows the LAFD knows that we would never and have never made such a blanket declaration.

The whole story has yet to be written, and again, the principal players in this scenario are his Homeowner's Association and the City Attorney's office.

Though I do not think that Khalil meant any harm to our reputation. I am saddened that our agency's official view of the Amateur Radio Community has been somewhat besmirched by those who may have mis-interpreted his statement(s).

I wish Khalil the best in his dealings with his HOA and the City Attorney's Office. I am also hopeful and indeed comforted in knowing that he can turn to his many friends in the Amateur Radio Community for support (legal and otherwise) as he confronts:

- His Homeowner's Association
- The City Attorney's Officer

I offer this reply not in an antagonistic manner, but only in the course of my duties, which is to defend the acts and image of the men and women who regularly place the needs and often lives of others ahead of their own.

Very Truly Yours,

Brian Humphrey

Firefighter/Paramedic

Public Information Officer

Los Angeles Fire Department

PS: My e-mailbox is already overflowing with mail on this matter, and I cannot possibly offer a personal reply to all.

# # #

End included message

73 es GA from Jeff
(Hoping that as stated above, that the LAFD does indeed *NOT* have
a policy against amateur radio ops.)

4468. Shame on Clinton

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-19 00:00:00 UTC
From: jmslater <jmslater@mvillage.com>
Message-ID: <6u1noudfa1@client3.news.psi.net>
Source record: 161500

What follows is not a joke but a column that appeared in the Chicago Trib last week. It is one of those columns that almost makes you weep that such a Judas is in office. Send it on to your military men!

SURE CLINTON'S TRYST
IS A PRIVATE MATTER
--JUST LIKE WAR IS

September 15, 1998

President Clinton's defenders keep making their case that his private life has no bearing on how he does his job.

They prattle on about his job approval ratings, which actually track how fat our wallets have become, not whether he can lead this country in a serious crisis.

Maybe you think that Independent Counsel Ken Starr's report is about Clinton, the lothario. But, if you want to learn something about Clinton as a leader, I refer you to the part about the pizza date with Monica Lewinsky at the White House.

That was also the night that Clinton was on the phone with a powerful Alabama Republican congressman, H.L. "Sonny" Callahan. What we didn't know is what they were talking about.

Now it's emerging that they were discussing sending American troops into harm's way in Bosnia--putting our sons and daughters into a dangerous place that is full of death.

The president needed a vote from Callahan--chairman of an appropriations subcommittee that controls billions of dollars in foreign aid--for the peacekeeping mission, which would augment an international accord being developed in Dayton, Ohio.

But while he was on the phone, Clinton was simultaneously occupied. White House

intern Monica Lewinsky was performing
oral sex in the Oval Office.

Imagine someone receiving those favors
while they're talking to you on the phone.

Now imagine that the subject you're talking
about is literally about life and death.

At issue was the fate of American troops.
And also the fate of the Balkans, one of the
bloodiest killing grounds in the world.
What's going on there threatens to spill over
into Greece and Turkey, while Russia
continues to crumble.

I called the White House on Monday on the
chance they would dispute the facts as
presented by Starr and Callahan on that
night, Nov. 17, 1995. And as they have
done in the past few days, officials declined.

Callahan, meanwhile, is issuing this
statement: "I do recall talking to the
president during which time he was seeking
my assistance for the American mission in
Bosnia. But I do not have any recollection
of any inappropriate behavior or comments
from the president during my conversation. .
. .

"I had no knowledge that I was sharing the
president's time or attention with anyone
else."

That night, Callahan and a handful of other
Republicans voted with the president's side
in opposing a move to prevent funds from
being spent to send those troops overseas.
They lost.

Eventually, the Dayton Peace Accords
were signed. The president sent thousands
and thousands of soldiers to Bosnia. He
promised he'd bring them back by the end
of 1996. They're still there.

I called Callahan's office on Monday and
talked with his chief of staff, Jo Bonner

"Sonny has very mixed emotions about
this," said Bonner, who added that Callahan
was considering a critical public address

about Clinton on the House floor. "He could be voting on this (impeachment) issue, and he's not trying to grandstand.

"But the president says it's a personal matter. It became a public matter when he lobbied the congressman, talking about sending men and women overseas, even as he was being entertained by Miss Lewinsky. . . . You could say it is an insult. And worse."

A White House official said on background that the president has great respect for those who serve their country overseas.

Yeah. Sure. He proved it.

According to her grand jury testimony, Lewinsky said that Clinton suggested she bring him some slices of pizza. When she arrived, she was immediately welcomed and ushered inside.

But during their loving caress, Clinton had a telephone call. She recalled that the caller was a member of Congress with a nickname.

While Clinton was on the telephone with the congressman, she testified that Clinton unzipped himself and she did her duty. She was at the White House that evening from 9:38 to 10:39 p.m.

White House phone records confirm, according to the Starr report, that Clinton had only one telephone conversation with a member of Congress. From 9:53 to 10:14 p.m., he spoke with "Sonny" Callahan.

While the House vote took place, diplomats anguished about whether the peace process would collapse. Muslims, Serbs and Croats, along with diplomats from America and other countries huddled in Dayton.

The people of the former Yugoslavia were desperate for relief from terror. American soldiers drilled. Their commanders planned, and most likely worried about their troops, as good officers always do.

Across this country, the mothers and fathers of soldiers worried and prayed. Some surely lit candles. U.S. representatives with opposing views fought it out with each other.

And the commander in chief, the president of the United States, his mouth full of pizza, entertained himself with a groupie in the Oval Office.

He is without shame.

4469. Mods Needed-Alinco DJ-S11 & DJ-S41

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-19 00:00:00 UTC

Anyone out there know of any mods available for the new little 350mw handhelds from Alinco on the DJ-S11 2meter and the DJ-S41 UHf radios? Sure would like to open up the receive range atleast. There tight.

If anyone has the Standard 510a small dual band 1watt HT, I have the mode for it. Real easy, just lift off one surface mount chip jumper, reset and it opens up rec & xmt.

Thanks, Harris - N5QJE, Pearland,Tx

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 19/2330Z SEPTEMBER 1998 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 19 SEPTEMBER AND FORECAST FOR 20 SEPTEMBER - 22 SEPTEMBER
STATUS INDICATORS SOL:GREEN MAG:** YELLOW ** ION: **YELLOW**

1A. SOLAR SUMMARY
Activity 19 Sep: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number for 19 Sep: 127/80

GOES satellite data for 18 Sep
Daily Proton Fluence >1 MeV: 2.5E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 5.00E+05 (normal)
X-ray background: B3.7
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
20 Sep 21 Sep 22 Sep
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 20 Sep: 130/84
COMMENT: Solar wind speed currently mildly elevated at 420km/sec.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 19 Sep: Quiet to unsettled

Estimated Indices 19 Sep : A K
Learmonth 9 3222 2232
Fredericksburg 10
Planetary 15

Observed Indices 18 Sep : A K
Fredericksburg 14
Planetary 20 2223 6343

2B. MAGNETIC FORECAST
Date Ap Conditions
20 Sep 18 Unsettled to active
21 Sep 20 Active
22 Sep 20 Active
COMMENT: IPS Geomagnetic Warning 30 was issued on 17 September

and is current for interval 20-22 September. Active conditions
expected next few days, with minor storm periods possible during
local night hours due to coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
19 Sep Normal Normal-fair Normal-fair
PCA Event : No Proton/PCA Event In progress

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
20 Sep Normal Normal Normal-fair
21 Sep Normal Normal-fair Fair-poor
22 Sep Normal Normal-fair Fair-poor
COMMENT: High latitude HF communications are expected to become
degraded during local night hours.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
19 Sep 79

Observed Australian Regional MUFs:
Darwin: enhanced 30-50% 13-16UT, otherwise near normal.
Townsville, Sydney: near predicted monthly values
Hobart, Christchurch: depressed 15% during local day, with
spread F during local night hours.
Mundaring: depressed 15-20% during local day.

Predicted Monthly T index for September: 89

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
20 Sep 80 near predicted monthly values/depressed 10 to 15%
21 Sep 70 near predicted monthly values/depressed 10 to 15%
22 Sep 70 near predicted monthly values/depressed 10 to 15%
COMMENT: Increased geomagnetic activity is expected to cause
degraded HF conditions for southern Australia and New Zealand
region 20-22 Sep during local night hours and after local dawn.

Directly responding to you out of the "Lets Ding Dan and Roger Group" is
against my policy. However I would like you to know I had not read the
response you are refering to. I have just now done so. I appreciate your
candid comments concerning the war and the warrior. I believe we agree on
that point. Thank you for being man enough to temporarily set aside your
dislike for me to be honest. However, I can not allow this one incident of
rational behavior towards me disuade me from the knowledge that you are a
self chosen enemy of mine. And will be treated as such.

I am currently studying for my Technician-PLUS test. I plan to take all three elements at once. If I were to take only the 2 and 3a to "get on the air", it might be too tempting to blow off the code. Actually it wouldn't, it's just that I am not only a purist, but I am also having more fun learning code since I learned to fly (Commercial, Instrument, CFI).
I don't feel that any ham can say some license holders are "real" hams and others are not...anymore than an ATP (Airline Transport Pilot) can say that someone who holds "only" a Private Pilot License is not a "real" pilot!
Be nice people. I know better than to let the tone of some of these postings make me think hams are jerks....I've seen the same cut-downs on all bulletin boards from the know-it-alls. Rather, I guess it just comes with computer bulletin boards.
Oh, and after I get my Technician-Plus, I won't stop there.....but I WILL do my very best to speak AND key!! with the best southern drawl I can!!! :-)...especially on VHF so everyone listening will think I am "just" a "lazy tech".
Mad Dog (Bill Glanton)

Thanks to the many of you who have written regarding the Los Angeles Fire Department's stance in regards to the Amateur Radio Community.

Khalil Ladjevardi wrote...

> K6FCC
> NNNOBSB (Navy-Marine Corps MARS)
> (Khalil Ladjevardi)

I know Khalil and he is a very nice man. There can be no doubt WHATSOEVER as to his dedication to the community at large and to the men and women of public safety in particular. Please let me make that perfectly clear.

The situation that Mr Ladjevardi finds himself in is certainly unfortunate. At this time, his course of contact and complaint is specifically with his Homeowner's Association, and if he feels wronged (directly or indirectly) by a City Employee - the City Attorney's Office. I have offered him contacts for the latter, and frankly do not know the status of his inquiry or negotiations.

Khalil specifically wrote...

> The Los Angeles City Fire Department has now officially gone on record with
> the position that amateur radio operators and their antennas are a direct
> hazard to public safety.

It is clear that Khalil is incensed that his property suffered damage. I certainly have no quarrel with that. None of us stand for having our hard-earned goods damaged or destroyed. I think it important however, for the reader to review Khalil's statement:

>....I discovered that the members of my homeowners
> association in conjunction with the management company willfully committed
> this act.

I offer this only to the many of you who somehow surmised that the Fire Department had gone and torn down the antennas. That is NOT the case, nor does Khalil infer it to be.

Khalil is a calm and logical person, so it is apparent (to me at least) that this situation has aggravated him immensely.

Please let me return to another statement:

> The Vice-President of the my homeowners' association told me "
> The Homeowners' group was acting on direct orders of Los Angeles City Fire
> Department (LAFD) Capt. Randall Judd, and Fireman Charles R. Palacios (
> both are at Fire Station 092) who told them that it was in the public
> interest to commit acts of vandalism against amateur radio operators by
> destroying their antennas".

Please note that this is a quoted statement (and possibly the opinion of) the VICE PRESIDENT OF HIS HOMEOWNER'S ASSOCIATION [emphasis added]. I know of
no such statement by any of our members. The Vice-President of his HOA does not speak for the LAFD!!

Most distressing however, is (Khalil's understandable opinion), which many of you took as "fact" or even "current LAFD policy". See below.

Khalil wrote...

> The Los Angeles City Fire Department has now officially gone on record with
> the position that amateur radio operators and their antennas are a direct
> hazard to public safety.

I'll let that statement speak for itself. With no disrespect for Khalil, I feel that members of the Amateur Radio Community are astute enough to determine whether or not we have categorically and "officially" declared (and I quote his quote):

>amateur radio operators and their antennas are a direct hazard to public safety

Anyone who knows the LAFD knows that we would never and have never made such a blanket declaration.

The whole story has yet to be written, and again, the principal players in this scenario are his Homeowner's Association and the City Attorney's office.

Though I do not think that Khalil meant any harm to our reputation. I am saddened that our agency's official view of the Amateur Radio Community has been somewhat besmirched by those who may have mis-interpreted his statement(s).

I wish Khalil the best in his dealings with his HOA and the City Attorney's Office. I am also hopeful and indeed comforted in knowing that he can turn to his many friends in the Amateur Radio Community for support (legal and otherwise) as he confronts:

- His Homeowner's Association

And if he feels so inclined..

- The City Attorney's Office

I offer this reply not in an antagonistic manner, but only in the course of my duties, which is to defend the acts and image of the men and women who regularly place the needs and often lives of others ahead of their own.

Very Truly Yours,

Brian Humphrey
Firefighter/Paramedic
Public Information Officer
Los Angeles Fire Department

PS: My e-mailbox is already overflowing with mail on this matter, and I cannot possibly offer a personal reply to all. Thanks!!

4479. Ohio/Penn DX Bulletin #375

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-20 00:00:00 UTC
From: kb8nw@barf80.nshore.org
Message-ID: <$opdx.375.1998@ampr.org>
Source record: 161398
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.dx,rec.radio.info

SB DX @ WW $OPDX.375
Ohio/Penn DX Bulletin No. 375

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 375
BID: $OPDX.375
September 21, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N1OLO, WB2RAJ/WB2YQH & The 59(9) DXReport, K4VUD, W4WX, N5UR, N6RT, K8EP, WB8YJF, AP2TJ, BV4FH, C6AFV, DJ5AV & DX News Letter, DL2VFR, DL6FBL, G3XTT, G4BUE & DX News Sheet, IK1QBT, JH6RTO, ON4ANT, P43P, PA3AXU, PA0JR, PS7AB, PS7KM, PY1KS and ARRL Letter for the following DX information.

3A, MONACO. "The 59(9) DXReport" states that Luc, I1YRL, will once again be active as 3A/I1YRL in October and November. No specific dates were given. QSL via I1YRL.

7O, YEMEN. Zoli, HA5PP, reported to OPDX last Thursday that he will be traveling to Sana'a, Yemen, on Friday, September 18th. KYFC!! (Keep Your Fingers Crossed)

9H0, MALTA. The Dutch Amateur Radio Society (V.R.Z.A.) has planned their 11th DXpedition/holiday trip and will be active from here October 3-18th. The group of 24 hams will activate the Island of Qawra (EU-023) with five HF stations using their own 9H3 callsign on CW and SSB. A special club station callsign has been issued, 9H0VRZ. QSL Manager for this station is PA0JR, Andre van den Bos, Korianderweg 25, 9731 HW Groningen, The Netherlands. More information and direct QSL addresses for all participants can be found on the WEB site: http://www.vrza.org/malta.htm

9M6, EAST MALAYSIA. Ed, K8EP, will be operating from the station of 9M6AAC. He will be there from October 8-11th. Ed will be concentrating on CW but also some SSB. Operations will be on mostly 40, 20, 17, 15 and 10 meters. QSL route is via N2OO.

9N, NEPAL. Good news for those who need Nepal! The "DX News Sheet" reports that the following operators have been issued new licences in Nepal: Khatri/9N1AB, Navin Mainali/9N1AC (previously 9N1CW), Mr. Sunuwar/9N1AD, and Gourish Kharel/9N1AE.

9Y, TRINIDAD AND TOBAGO. Members of the Bavarian Contest Club (BCC) will be active from here October 15-31st. Operators will be DK6WL, DL4MCF, DL4MDO and DL4MEH, and they will sign as 9Y4/homecall from Tobago Island. Operations will be on CW/SSB/RTTY with operations on 160-10 meters. They will also be a Multi-Single entry in the CQWW SSB Contest with a special callsign. QSL via their home calls.

A3, TONGA. The "DX News Letter" reports that Klaus, DJ4SO/A35SO, and Manfred, DJ7RJ/(will receive his call upon arrival), will be active from here October 1-19th. They intend to operate with a FT-847 and a IC-775DSP, no power amplifiers and vertical antennas (HB9CV on 6m) on 160-6 meters. QSL via the bureau to their homecalls.

A3 AND 5W, TONGA AND WESTERN SAMOA. Gerard, PA3AXU, reports that he will depart on October 19th, from Amsterdam Airport for Tonga. He will arrive on October 21st, and his callsign will be A35XU (his license to be picked up upon arrival). He will stay in A3 until October 28th, where he will then transfer to Western Samoa. His callsign will be 5W0GD and plans to stay until November 8th, at which time he will depart from 5W for PA-land. He will use a TS-450SAT, DX-70 (for 6 meter monitoring), GPA-30 and wire dipoles. Operations will be on RTTY/CW/SSB with activity on the "normal DX-frequencies", including the WARC bands, and a trial and error on the low bands (he has no AMP). Gerard is looking for input on whether to put an emphasis on particular bands/modes. Request are welcome at:
dijkers@molyvos.net
QSL to: G.A.M.C. Dijkers, PA3AXU, Dokter P.A. Cornethof 3,
6669AZ Dodewaard, The Netherlands.

AP, PAKISTAN (on CW and RTTY). Nasir/AP2NK is active on 20 meters CW beaming short path to the USA 0130-0300z. Look for him around 14010-14030 kHz. QSL via CBA. Tariq/AP2TJ is active on 20 meters RTTY at the same times, again beaming short path to the USA, usually on 14083 or 14085 kHz FSK. QSL via W3HNK.

ARRL OUTGOING QSL BUREAU. Starting January 1, 1999, the ARRL Outgoing QSL Bureau will increase its fees from $4.00 to $6.00 a pound, (150) cards. The increase is necessary "to absorb the effects of a proposed postal rate increase and to bring the money-losing service a bit closer to a break-even basis" (ARRL Newsletter/Bill Kennamer). The rate for quantities of 10 cards will remain at 1 USD.

BM0, TAIWAN. Look for BM0S which is a new prefix from Taiwan. This station was active this past weekend from downtown Taichung city. This call will be on the air for just 2 weeks. Activity seemed to start on September 17th. Paul, BV4FH, was put on the air to use this opportunity to educate the BV people on how to use the radio legally and give examinations for the novice class. The QSL info for the BM0S is: P.O.BOX 2006, Taichung City Taiwan ROC.

CN, MOROCCO. Ben, DL6FBL, has announced to OPDX that he will be active in the upcoming CQWW Contests. Look for him here October 20-25th in the CQWW SSB Contest as CN8MC (or CN2??) as a Single OP/All Bands/High Power entry. Look for him again November 25-29th in the CQWW CW Contest as

CN8MC (or CN2??) as a Single OP/All Bands/High Power entry. He will be operating the WARC bands before the contests. QSL cards for SSB and CW will be automatically sent via the Bureau. People who can't wait, send directly to DL6FBL (CBA). Ben will be updating this info as soon as he knows which callsign will be used. Also, he will soon activate a webpage at: http://www.boc.de/dl6fbl/

FG, GUADELOUPE. Members of the Southern California DX Club (N6RV, K6RO, W6SR, N6ED, W6KK, and N6RT) will be active from here (IOTA NA-102) from October 17-27th. They will be a Multi-Single entry in the 1998 CQWW SSB contest using the callsign FG5BG. They will be on before and after the contest using FG/homecall on all bands (160-10 meters) using CW and SSB. QSL via bureau or direct to their homecalls. QSLs for FG5BG for "1998 CQWW SSB ONLY" via K6RO. A web page and log search will shortly be available at: http://www.qsl.net/n6ed/fg.html.

HI3, DOMINICAN REPUBLIC. Operators ON4ANT, ON4GG, ON4AOI, ON4AME, ON4AMM (YL), ON4AWK, ON4CBA and ON5LW will be active from here October 20-27th. They will be an entry in the CQWW SSB Contest as HI3/ON4ANT. Activity before the contest will be on CW/SSB /RTTY on 160-10 meters using a FT-1000MP, ALS600 amp and verticals (if they can get FT-920 from their sponsor, they might get on 6 meters). QSL via CBA or bureau.

IOTA NEWS.....
EU-075. Lars, SM3CVM, will be active during vacation as SV8/SM3CVM/P from Poros Islands in the Peloponnisos East Group between September 25th and October 7th. Activity will be mainly CW on 40-10 meter at the lower part of the band or near the IOTA frequencies. QSL to home callsign or via the bureau.

EU-098. Look for DL2RNS, DL2RVL and DL2VFR to be active from Poel Island (O-002 for German Island Award), November 13-15th. The team will use their own individual callsigns signing portable. They plan to be active around the clock using 3 stations, 1 PA and several different antennas to give everybody a chance who is interested in working this island located on the Baltic coast for the IOTA or German Island Award. They will be on the IOTA frequencies (a bit more CW than SSB!). QSL via homecalls to the bureau.

NA-136 (Update/Correction). Last week in OPDX.374 we mentioned that the Great Norwalk Amateur Radio Club would activate Sheffield Island on October 8th, this is WRONG. The correct date is October 3rd. Also, the club callsign W1NLK will be used.

KH8, AMERICAN SAMOA. Bill, W4WX, will join Don, N5OLS, in Pago Pago as a Multi-Single entry in the CQWW RTTY contest September 26-27th. If the "Space A DX Group's" travel permits, Bill will be active a few days before the contest. Bill is the founder of the Space A DXPedition Group. Visit their web page at: http://www.geocities.com/Nashviulle/9646 Please QSL W4WX/KH8 via his CBA address in Florida.

P4, ARUBA. Jacobo, P43P will be active on all bands as P40B during the CQWW SSB Contest (October 24-25th). QSL information for P40B is: Jacobo Oduber, P.O. Box 685, Oranjestad, Aruba. PLEASE SEE P40 NOTE UNDER QSL INFO AND NEWS. Depending on the results of the contest, Jacobo might have to look for a QSL Manager for the P40B callsign. In the meantime, he requests to just send direct all QSL requests for P40B to the address stated above. E-mail inquiries can be directed to: P43P@arubanet.com

QSL INFO AND NEWS......
The Aruba QSL Bureau is NOT handling P40 QSL cards (EXCEPT P40HQ!!), since these callsigns are "specific contest callsigns" in P4 land, and it is difficult for the Aruba Bureau to keep track of all the visiting amateurs using the P40 callsigns.

C6A25FV CARDS. Delano, C6AFV, informs OPDX that he has just sent out about 2000 cards for his C6A25FV special event callsign. He requests that if you have already sent a card, do not resend, and also, PLEASE make sure that the IRCs are stamped in the lower left.

QSL Manager, Bill, K1WY, reports that he is manager for the following DX stations: 5R8ET, ET3BT, GI6YM, P29CC, S21J, TF7GX, TF8GX, UA0DC, UA0ZBK UA0AOZ and ZL3KIM. Send your cards to P.O. Box 2644, Hartford, CT 06146. Bill also has a Web Site with more info at: http://home.att.net/~k1wy

PS1A and PS1S. These two stations were active this past weekend from Grande Island (SA-029). Operators were PY1SL and PU1KDR. QSL via PY1SL either direct or through the bureau.

9M0C QSLS. Don, G3XTT, reports that all direct cards to date have been replied to and posted. All E-mail requests to date have been responded to via the RSGB bureau. All bureau cards received to date have been processed and passed to the RSGB bureau. If anyone requesting a direct card and has not received a card by September 24th, they should re-apply to Phil, G3SWH. The 9M0C team wants to thank Phil for his efforts which, so far, have involved confirming some 27,500 QSOs out of a total of 65,000 made on the expedition (and the bureau cards continue to roll in).
9N1UD AND HS0ZCW. Charlie, K4VUD, who was active on CW/SSB/RTTY from Nepal in July, August and during September, states to please QSLs via K4VUD. Also, he guest operated from HS98AG, the special event station in Thailand (callsign for the Asian Games). Charlie states that while there, he was able to obtain his own callsign, HS0ZCW, in September, 1998, SSB only. Please QSL to K4VUD.
ON50BDS CARDS. Eric, ON7LR, has asks for those who are awaiting for ON50BDS QSLs to PLEASE be patient. Eric has had a hard drive crash on his computer and is awaiting repairs. He will confirm all QSOs as soon as possible.

NEW QSL MANAGER. Bill, VK4FW, reports that he has become the QSL Manager for the following new stations: YC0IEM, YC9MKF, YC9NBR, YC1LGP and YC8VIP. QSL via VK4FW at: Bill Horner, P.O. Box 929, Gympie, 4570, Australia.

SPECIAL EVENT STATION. Now until September 28th, look for special event station IY1EY to qualify for the "Loano Elettra Award" to celebrate Marconi's radioeletric experiments on the Elettra Ship from 1919 to 1936 in the Ligurian Sea. The special prefix IY1EY will be active on all modes (CW/SSB/RTTY) and bands. To receive a special QSL card reproducing Marconi's legendary boat "Elettra", QSL IK1QBT via the bureau or direct to: Tony Gallo, Via Capo S.Spirito 1/16, 17052 Borghetto, S.Spirito (SV) Italy.

ST, SUDAN. "The 59(9) DXReport" states Pierre, HB9AMO, plans to be in Sudan for 3 months starting in October. He will attempt to obtain a license.

V2, ANTIGUA. The Frankford Radio Club (FRC) has once again announced that "Team Antigua" will be active again during October 20-30th and be a Multi-Multi entry in the CQWW SSB Contests as V26B. Before and after the contest the operators will be active using their own callsigns. Look for them to be on CW/SSB/RTTY on all bands (including the WARC bands and 160 meters). The list of operators are as follows:

OPERATOR	V2 Callsign	QSL to
Dale/N3BNA	V26A	via WB3DNA
Sam/WT3Q	V26B	via HC
Tom/N2TK	V26AK	via WT3Q
Bill/W2UDT	V26U	via HC
Doug/W3CF	V26DX	via KU9C
Barry/W3FV	V26FV	via HC
Jay/WXOB	V26J	via HC
Brian/N3OC	V26OC	via HC
Mike/KA2AEV	V26R	via HC
Dick/K3MQH	V26T	via HC

Tom, ZP5AZL, and Wayne, K5ZG, will receive their V2 callsigns upon arrival. The members of V26B, Team Antigua, have also announced that their 1998-1999 Web site is functional at the following address:
http://www.frc-contest.org/v26b/index.htm
This is a link off the main FRC Website that posts all the coming DXpeditions and other club information.

VP9, BERMUDA. Seiji, JH6RTO/AH0R, will be active from here as AH0R/VP9 from October 15-17th. He will mainly work on the WARC bands. QSL via JH6RTO or Seiji Fukushima, 1182-2506 Hase, Atsugi 243-0036 Japan.

XX9/VR2, MACAO/HONG KONG DXPEDITION (Update). As reported in last week's bulletin, OPDX.374, Jon/WB8YJF and Leo/K8PYD would be going here. Their departure date has been changed to September 22nd rather than September 20th due to a change in airlines. This may or may not effect their return date. They plan their operation with a heavy ephassis on RTTY. They also mentioned that they will have InterNet access from VR2, so they can let everyone know their exact schedules. QSL via homecalls.

ZY0, ST. PETER AND ST. PAUL ROCKS. The "NATAL DX GROUP" has announced that they will be active from here, January, 1999. There will be four operators: Randy/WX5L, Karl/PS7KM, Tino/PT7AA and another operator yet

to be announced. They plan to leave Natal, Brazil, the second week of January in 1999, with the operation to commence 4 days later. The operation will last for 12 days, or 2 full weekends. All bands and modes will be utilized, with emphasis on RTTY, 6 meters and low bands (80/160 meters). The normal DX frequencies will be used. The callsigns will be ZY0SP for SSB/RTTY (QSL via PS7KM) and for CW, ZY0SZ (QSL via PT7AA). Both QSL callsigns can be found via 1998 CB. Their total planned budget for the event will be 11,000 USD, with 70% to be allocated for the boat rental. Due to these facts, they are requesting donations to make this DXpedition possible. Funds can be sent to WX5L Randy or PS7KM Karl via CBA. The "NATAL DX GROUP" E-mail address is: ndxg@qsl.net

Actually, I almost never have the mic connected. This is happening with NO mic. Also, I do use external an speaker now since the rig is mounted in the trunk.

Jeff,
THANK YOU for the postings.

I certainly hope that this gentleman is able to recover his damages
and that the homeowners group is the culprit. Having 4 years
experience working with LA COUNTY RACES, I can say that at least from
the county agencies amateur radio support is taken quite seriousely
and like you hope that the LA CITY FD does not have any official, or
un-official, policies that would consider amateur support as
detrimental to their mission of public safety.

On another note; Jeff it is good to hear from you, perhaps you
remember me from 'S-73'?

4486. Cordless phone?

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-20 00:00:00 UTC
From: ricrict@accessone.com
Message-ID: <3605718d.99131883@news.accessone.com>
Source record: 161405

I couldn't find any info using a search engine on the Web, so I thought someone in this newsgroup might have some answers to these questions:

We're looking to buy a new cordless phone (not cellular, just cordless for around the house). Why would we need/want a 25 channel phone? The old one had 10 channels, and we never did anything to change the channel it was using by default; should we get the 25 channel model?

What about one that says it's "digital"? I thought they all used some kind of digital technology; is there some advantage to paying more for one that says it's digital?

Thanks.

Ric

Ric,

Go with the digital 900Mhz models. They are coming down in price.
Very clear and NO STATIC or BUZZING noises at all. The range of mine is
about 150 feet or so. Plus they are private, noboby with a scanner can
listen in, I know!

Hope this helps.

Mike

Hi.Thanks for reading this. I have a Motorola MT1000 99 channel UHF Radio that is not working correctly. The symtoms are:

The radio, once turned on, continues to "reset", that is, it acts as if you on are just turning it on. The radio emits a "beep" every several seconds and the LCD display shows all sements lit. The audio sounds broken and after several minutes of the radio in the on position, it locks up and there is no audio and it will not transmit.Any ideas on the cause or anyone have a similar problem? Maybe the radio's processer?

Thanks in advance,

Doug N4UCM

David,

I consider the two bands pretty much similar in propagation. Because of the shorter wavelength, a 440 antenna of the same size will have slightly more gain (i.e. a half wave 2m antenna will be more than a full wave antenna on 440). However, I think the most important consideration is what others with whom you want to communicate are using.

Mark

Source: http://harvest-trust.org/scdchang.htm

Date: Sept, 1998 - Hour Of The Time Broadcast Schedule Change
William Cooper's Hour Of The Time is moving to a new station
and a new time beginning Monday September 21, 1998.

We will broadcast on WBCQ 7.415 MHz Worldwide Shortwave
from 9 pm to Midnight Eastern Time Monday thru Thursday nights.

This station blankest North America, Central America,
South America, the Carribean Ocean, Hawaii, the Far
East, England, and most of Europe. It can be received
anywhere in the world using a good shortwave radio and
a good external antenna. HOTT Radio is back bigtime,
spread the word far and wide.

Dated 13th September 1998

Hi all.
I am looking for the manuals for a Trio TS520SE. It has no heater switch. Can't think why. Anyway, perhaps that's the difference between the 520 and the 520SE. Still, any help is a step in the right direction.
My rig is an ex-university rig and soemone must have thrown out the manuals many moons ago.

Thanks in advance.

It doesn't have a heater switch because it has no provision for running
mobile like the 520 & S did.. Different power transformer, several other
differences too...

Destroying equipment associated with a federally-licensed radio station
is, according to my recollection as a commercial licensee, a federal felony

... additionally, to the best of my knowledge, the law doesn't
say "Unless it's an amateur station and your homeowner's association doesn't
like it."

I'd consider taking this up with the US Attorney's office or the FBI, while
copying the FCC's enforcement folks, just to drive home the point that
we need some protection from predatory homeowner's associations and
their outrageous "CC&Rs" ... as well as their apparently vigilante-like
actions in some cases.

When you open it up to check the memory backup battery, look for any signs of electrolyte leakage that might have dripped on the PC board. I had this problem years ago with my 3000, and the symptoms were the same as you mentioned. After replacing the battery, I cleaned the crud off the board with some isopropyl alcohol, reset the microprocessor, and it cured the problem.

I am looking for the author of a frequency synthesizer who designed this option that can be added to a HT-220. It can select both TX and RX frequency in the 2-meter band with 5 KHz separation. His name is Dale Heatherington, WA4DSY. I have a copy of his design and I want to add it to my HT-220 page. Anyone that knows how to reach him, please let me know. [yes, I know, but I don't have a ham directory].

Thanks,

Mike
mfKILLwright@batSPAMnet.com
(remove the words "KILL SPAM" before sending message)

I have also updated the HT-220 page which also shows some photos of the inside of a HT-220. See http://www.batnet.com/mfwright/HT220.html

Hi Peter,

I looked at my available resource materials and only found this.
Try http://www2.wcoil.com/~fairadio

Catalog number BX-1475 is a 6.3vct 15A filament transformer and you can
string as many of these together as you wish with taps avery 3.15 volts
to a bridge rectifier system for multiple voltages out.
Weight 7 lbs each.
Perhaps others mnight have other sources.

Just a suggestion.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 20/2330Z SEPTEMBER 1998 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 20 SEPTEMBER AND FORECAST FOR 21 SEPTEMBER - 23 SEPTEMBER
STATUS INDICATORS SOL: GREEN MAG:** YELLOW ** ION: ** YELLOW**

1A. SOLAR SUMMARY
Activity 20 Sep: Moderate

Flares Max Fadeout Begin End Freq. Sectors
M1/-- 19/0251UT Confirmed 0245 0330 Lower Australia/East Asia

Observed 10.7 cm flux/Equivalent Sunspot Number for 20 Sep: 132/86

GOES satellite data for 19 Sep
Daily Proton Fluence >1 MeV: 4.9E+04
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 9.00E+05 (normal)
X-ray background: B3.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
21 Sep 22 Sep 23 Sep
Activity Low to moderate Low to moderate Low to moderate
Fadeouts Possible Possible Possible

Forecast 10.7 cm flux/Equivalent Sunspot Number for 21 Sep: 135/89
COMMENT: The region that produced the M class flare is showing
growth and further isolated M class flaring is possible. Solar
wind speed has dropped from 440km/sec to 320km/sec over the UT
day.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 20 Sep: Quiet to unsettled

Estimated Indices 20 Sep : A K
Learmonth 4 3211 1100
Fredericksburg 9
Planetary 10

Observed Indices 19 Sep : A K
Fredericksburg 8
Planetary 12 2213 3333

2B. MAGNETIC FORECAST
Date Ap Conditions

21 Sep 17 Unsettled to active
22 Sep 20 Unsettled to active
23 Sep 15 Unsettled
COMMENT: IPS Geomagnetic Warning 30 is current. Solar wind speed
has declined. However, recurrence suggests that active periods
can be expected during interval 21-22 Sep and 24-25 Sep. due
to coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
20 Sep Normal Normal Normal
PCA Event : No Proton/PCA Event In progress

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
21 Sep Normal Normal-fair Normal-Fair
22 Sep Normal Normal-fair Normal-poor
23 Sep Normal Normal Fair-normal
COMMENT: High latitude HF communications are expected to become
degraded during local night hours.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
20 Sep 83

Observed Australian Regional MUFs:
Mostly near predicted monthly values, with the exception
of Darwin which was enhanced by up to 50% during local night
hours. Spread F observed southern region during local night
hours. Mundaring Mufs were depressed 15-20% during
local day.

Predicted Monthly T index for September: 89

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
21 Sep 80 near predicted monthly values/depressed 10 to 15%
22 Sep 70 near predicted monthly values/depressed 10 to 15%
23 Sep 70 near predicted monthly values/depressed 10 to 15%

COMMENT: MUFS are mostly expected to be near normal. However,
occasional periods of depressions of 10-15% can be expected over
the next few days for southern region.

She has been a little on the absent side lately - in fact, since the
launch of WBCQ, I haven't seen one Anita Louise McCormick post...

And yeah, I kinda poked fun at her for her online promotion of the
station and/or other Allan Weiner ventures. But really...the Bat
Signal(tm) was mainly in fun...and I wonder what happened to her!

Can anyone direct me to a modification to eliminate RF feedback in the TS930? Experiencing severe RF feedback in the receiver's audio while transmitting moderate power at VHF.

Already tried extensive bypassing / toroids in MIC and speaker circuits.

Thank You
Paul Drexler, WB3JYO

I recently installed a 706 in the car and was getting reports that my CW signal was being heard twice about 600 hz apart... sounded like it was in a jar... much like the beeps from WWV. Well, I checked EVERYTHING. SWR flat, great ground, torroids on all leads, direct dedicated power source, etc. etc.

I finally found what was doing it and am wondering if any other 706 users out there have the same probem... or maybe you have it and dont know... who ever gives a 597 report?

It seems that (I operate qsk) when the audio gain is turned up, somehow the sidetone is being transmitted. If I turn the audio down and transmit, the signal is clean. If anyone has had this problem, please let me know. Icom says they have had no reports of this. If you have the time and interest, please try it. Have a friend tune through your signal with and without your volume turned up.

If you have a clue as to why this is happening, I'd love to hear from you.

Thanks for reading this.

I would have called the cops. I'd also want the homeowner's guys to produce
some writing that said the Fire Dept. had told them to do that.

Aren't there some laws about destroying radio station equipment still on the books?

I shudder to think about torturing that poor vette in such a way but your best bet is to buy a kit I've seen in one of the big supply houses like mid america or corvette america, for a magnetic antenna, that adds a small metal plate to the rear hatch bolts directly above the hatch mechanism on your center rear glass. Or if you can't find it I'm sure you can make one after you see the bolts. I'ts going to..ahem...make your vette look radio controlled :) but it's the safest way to do it without modifying the car permantly.

That depends on what you find most interesting. I don't mean
to try and just brush you off to a book, but when I started to
write a detailed response, I realized that I was going to write
a lot. There are so many facets; different bands, different
modes, etc. And when you start in one area you might learn
that something else meets your fancy better.

So, I would suggest finding a copy of "THE ARRL OPERATING MANUAL"
as a way to get started.

"...at its disposal...", not "necessary" - don't add your own words
to the FCC's regulations. Now, if you're able to think in a legalistic
sense, ask yourself what equipment would be at the disposal of an
"amateur station."

I've written to the FCC regarding this matter - I'll post their
reply to finally settle this issue.

I recall when JY1 waivers first became available. One individual used
it to avoid the 13 and 20 WPM exams...his disability???...he had at
least one heart bypass operation.

Of course I don't believe the criteria for the waiver was really
spelled out that well then nor did most doctors know what they were
signing. Doctors probably still don't know what they're signing
although it is more explicit and less ambiguous now.

One of the VE's on the team doing the examinations had at least one
heart bypass operation too and it sure as hell never affected his
ability to learn or do the code...(his words) well I guess during
surgury and recovery he might have had a hard time with it... :)

It is really a matter of the American news media brainwashing the public
with outright bullcrap about the event's in Nam. It is further perpetuated
by people like "thelibnet and CBRambutt". Neither has any direct knowledge,

and are too ignorant of the subject to take seriously.

The problem is the sterotypical nam vet is perpetuated by this type of commentary, by these type of people. There will never be an end to this sort of attack on the men and women that didn't run off to Canada.

Sounds like you hit the nail on the head....Your sidetone is being picked up by the mic still connected and retransmitted (I'd think that the mic should be out of the cct on CW but have seen this with other rigs over the years!). Likely its because they're using the VOX for QSK and are doing it on the cheap. You might try disconnecting the mic and keeping the audio up as you'd like it to see if problem still persists. IF IT DOES then I'd suspect microphonic action within the case...might try an external speaker (if you use an internal speaker now) to see if THAT cures the prob. Best of luck to ya.

Recommend that you attend a meeting of some ham clubs near you to
find out about your local ham radio scene. Please take a look at:
<http://www.arrl.org/field/club/clubsearch.phtml>
I see that you have "@u.arizona.edu" in your email address. Is
there a ham radio club on your campus? If so, publications like student
guides would telll you how to get in touch with the club.
Additional information can be obtained at the American Radio Relay
League. Your search could start at:
<http://www.arrl.org/>

I have approximately 6.500 relays for sale to the highest bidder. I will
also sell them in much smaller portions if needed. The manufacturer is
Potter & Brumfield.
The part # is T90S1D12-12 The ratings are as follows, The case on the
relay says,
30A,240VAC
10A,240VAC
15A,125VAC
They are normally open untill they are turned on. Single switch contact.
Coil is designed for12 volts.It has 153 ohms resistance across it. I
have been able to turn these on with as little as .050 M.A. but at 12
volts they will use .078 M.A.
They are printed circuit board type mounts. There size is as follows
Length, one and a quarter inches
Width, one and an eighth
height three quarters of an inch.
they are not a perfect rectanglular shape but close. I can be reached at
541 479 -3915 if I am not in leave a message. Dave Maltz

Please state where it says ANY FORM of communication required to save lives.
I have already written the part here on the NG and I sure don't and also the
FCC doesn't. Please show where ot is stated as you have written.

But as stated here on the NG it does not state that an amateur could transmit on police frequencies. Part 97 relates only to amateur radio and does not give you the permission to transmit on other frequencies other that ham.

Hey Jeff I think this Mickey guy needs to go back to school and learn to comprehend the English language.

Does he relaize that part 97 is not the only regulations pertaining to radio.

Part 97 is not a blanket coverage for all the radio spectrum, only for "AMATEUR RADIO" .

4543. UHF/VHF antenna/distribution problem

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-21 00:00:00 UTC
From: Jerry Willard <jerry_willard@kentrox.com>
Message-ID: <36067C88.213EAD99@kentrox.com>
Source record: 161344

Please excuse me if this is not the right group. I'm trying to get some weak UHF stations in the presence of strong VHF/FM signals. (I'm close to the transmitters but shadowed by a hill.) The UHF reception at the antenna is just barely usable. But I need to distribute the signal throughout the house via cable where the UHF is badly attenuated. So I installed a four output amplifier/splitter (Radio Shack 15-1168) but the VHF signals overload it. I need to somehow attenuate the VHF/FM but not the UHF at the amplifier input. Has anyone else had this problem and solved it? Thanks. Jerry

4544. Enroll in University of RF Propagation

A new reflector, the "E-Layer", is now active. This reflector, dubbed
the "University of RF Propagation", concentrates on theoretical examination
of RF propagation (as opposed to day-to-day prediction and event reporting).

I'm compiling a list of Amateur Radio operators who are noteable in their other lives. Examples of the sort of people I have in mind are (in no particular order:

Walter Cronkite, KB2GSD, TV Newsman

Scott Parazynski, KC5RSY, US Astronaut

Pedro Duque, KC5RGG, Spanish Astronaut

Keizo Obuchi, JI1KIT, Prime Minister of Japan

Hiram Percy Maxim, W1AW

Barry Goldwater, K7UGA, US Senator

Clifford Stoll, K7TA, Author

Curtis LeMay, W6EZV, US General

I suspect that many other hams (in addition to yourself) could be added to the list. I welcome your contributions.

Hi, looking for a UHF model of either: Maxtrac, SM120,GM300, (in order of preference)
if none are available, an MCX1000 will do in a pinch.... (remote).
Need at least 16ch., 40w, and prefer scan.
I've seen these radios advertised from around $100 to $450...
I have $200 I can put into one. I like COD, too, so curse me well.
I also like guarantees! A radio that looks good on your monitor will look good on mine and make me happy, too! :)
so what do ya have? Email please!
If price is a problem, I have other items of interest.
thanks,
Randy

4551. ARLB075 Hurricane Georges hits Caribbean Islands

SB QST @ ARL $ARLB075
ARLB075 Hurricane Georges hits Caribbean Islands

ZCZC AG75
QST de W1AW
ARRL Bulletin 75 ARLB075
From ARRL Headquarters
Newington CT September 21, 1998
To all radio amateurs

SB QST ARL ARLB075
ARLB075 Hurricane Georges hits Caribbean Islands

As of 1 PM EDT today, the eye of Georges was passing near the island of St Croix. It was due to strike Puerto Rico by 5 PM EDT. Puerto Rico Section Manager Guillermo Schwarz, KP3S, reports that island amateurs are waiting and monitoring hurricane net frequencies.

Maximum sustained winds are near 110 mph, making this is a strong Category 2 storm, which could generate a significant storm surge. Georges is expected to remain a dangerous hurricane during the next 24 hours. Press reports indicate the storm's powerful winds already have ripped off roofs and downed power lines. Residents were said to be taking refuge in shelters in Puerto Rico and in the US Virgin Islands. Both US territories have declared states of emergency and activated National Guard troops. Areas in the storm's path may expect similar damage. Small craft may be torn from moorings in unprotected anchorages.

Several nets and stations are expected to play roles in the emergency and recovery phases. These include National Hurricane Center station W4EHW, the Hurricane Watch Net on 14.325 MHz, a Salvation Army (SATERN) net, and the Antilles Emergency and Weather Net on 3815 kHz. Other nets are likely to be active. US Virgin Islands SM John Ellis, NP2B, was reported on the Hurricane Watch Net using a dipole strung in his house. The Hurricane Watch Net control op is still looking for hams in the affected areas. Amateurs are advised to avoid transmitting on relief net frequencies unless directed to do so by net control stations.

As expected disaster welfare inquiries begin to swell, the National Red Cross requests that amateur operators in and outside the affected areas refer clients and inquiries to local Red Cross chapters. If chapters refuse to process inquiries because a moratorium is in place, amateurs can record information using ARC

Form 2079h, available from ARRL HQ. When the moratorium is lifted, the operator should forward the completed forms to the local ARC chapter for service. When amateurs accept an inquiry, they must advise the client of the above procedure. Clients must also be advised to expect a delay in reply depending on the extend of damage to the telecommunications infrastructure.

In accordance with standard ARC procedures, a moratorium of at least 48 hours will be imposed on all inquiries for US territories in the Caribbean following Hurricane Georges. National Red Cross requests that no inquiries be sent to these locations during the moratorium. Also, during the moratorium, clients should be advised not to call Disaster Services, National Red Cross Headquarters.

I don't have much experience, but I do know of signal traps tuned to
whatever channel you want, you will probably need a few of these but I hear
they work quite well, check the back of Electronics Now magazine for some
sources. They are just basic attenuators that tune to a specific frequency.

From: Mike King KM0T <scsueepe@mtcnet.net>
Message-ID: <6u6t8l$1f8$1@mtc1.mtcnet.net>
Source record: 161361

Hi there fellow ops,

Getting back into the hobby once again after a long time away (uhhhg Cycle 21) Anyway, was rearching new rigs. Do you like the Icom rigs? After reading the ARRL reviews, the 746 looks like the best bang for the buck, but it would seem that the 756 would be abit better performing rig on HF and 6M than the 746... The 775DSP did not get a real favorable review in QST...but have they improved it since the review?

What about the Yaesus? The FT1000MP? Have looked at the kenwoods, but dont really like the selection.

Any rumors of new HF rigs right on the horizon?

Thanks everyone for your help!

The person who would do what you describe above had better be able
to justify that there was NO way that same transmitter could have
completed the necessary task on a legal amateur frequency.

In regards to having am amateur license for your above example,
it would make no difference. An unlicensed person could do
the same in a genuine emergency.

I used a very small enamel coated "hair" wire with shirt buttons as
insulators. I got the wire from old phonograph motors. I was amazed how well
I got out with this wire. The only problem was that birds would occasionally
fly into it and break it.

I don't know about the rest of AZ but the next big Phoenix area hamfest will be in the early part of December at Mesa Community College. Following that will be in March at the Scottsdale Community College. You might try checking the AZ Repeater Association website occasionally or contact some of their officers as they probably have the info.

Tim Hynde resurrected a stale message (no prob Tim, it happens) and wrote concerning a perceived anti-ham stance by the LAFD. This myth has taken on a life of its own, as people read only a small portion of Khalil's letter out of context.

For those who are interested on the LAFD and Amateur Radio.

==========

Thanks to the many of you who have written regarding the Los Angeles Fire Department's stance in regards to the Amateur Radio Community.

> NNNOBSB (Navy-Marine Corps MARS)
> (Khalil Ladjevardi)

I know Khalil and he is a very nice man. There can be no doubt WHATSOEVER as to his dedication to the community at large and to the men and women of public safety in particular. Please let me make that perfectly clear.

The situation that Mr Ladjevardi finds himself in is certainly unfortunate. At this time, his course of contact and complaint is specifically with his Homeowner's Association, and if he feels wronged (directly or indirectly) by a City Employee - the City Attorney's Office. I have offered him contacts for the latter, and frankly do not know the status of his inquiry or negotiations.

Khalil specifically wrote...

> The Los Angeles City Fire Department has now officially gone on record with
> the position that amateur radio operators and their antennas are a direct
> hazard to public safety.

It is clear that Khalil is incensed that his property suffered damage. I certainly have no quarrel with that. None of us stand for having our hard-earned goods damaged or destroyed. I think it important however, for the reader to review Khalil's statement:

>....I discovered that the members of my homeowners
> association in conjunction with the management company willfully committed
> this act.

I offer this only to the many of you who somehow surmised that the Fire Department had gone and torn down the antennas. That is NOT the case, nor does Khalil infer it to be.

Khalil is a calm and logical person, so it is apparent (to me at least) that this situation has aggravated him immensely.

Please let me return to another statement:

> The Vice-President of the my homeowners' association told me "
> The Homeowners' group was acting on direct orders of Los Angeles City Fire
> Department (LAFD) Capt. Randall Judd, and Fireman Charles R. Palacios (
> both are at Fire Station 092) who told them that it was in the public
> interest to commit acts of vandalism against amateur radio operators by
> destroying their antennas".

Please note that this is a quoted statement (and possibly the opinion of) the VICE PRESIDENT OF HIS HOMEOWNER'S ASSOCIATION [emphasis added]. I know of
no such statement by any of our members. The Vice-President of his HOA does not speak for the LAFD!!

Most distressing however, is (Khalil's understandable opinion), which many of you took as "fact" or even "current LAFD policy". See below.

Khalil wrote...

> The Los Angeles City Fire Department has now officially gone on record with
> the position that amateur radio operators and their antennas are a direct
> hazard to public safety.

I'll let that statement speak for itself. With no disrespect for Khalil, I feel that members of the Amateur Radio Community are astute enough to determine whether or not we have categorically and "officially" declared (and I quote his quote):

>amateur radio operators and their antennas are a direct hazard to public safety

Anyone who knows the LAFD knows that we would never and have never made such a blanket declaration.

The whole story has yet to be written, and again, the principal players in this scenario are his Homeowner's Association and the City Attorney's office.

Though I do not think that Khalil meant any harm to our reputation. I am saddened that our agency's official view of the Amateur Radio Community has been somewhat besmirched by those who may have mis-interpreted his statement(s).

I wish Khalil the best in his dealings with his HOA and the City Attorney's Office. I am also hopeful and indeed comforted in knowing that he can turn to his many friends in the Amateur Radio Community for support (legal and otherwise) as he confronts:

- His Homeowner's Association

And if he feels so inclined..

- The City Attorney's Office

I offer this reply not in an antagonistic manner, but only in the course of my duties, which is to defend the acts and image of the men and women who regularly place the needs and often lives of others ahead of their own.

Very Truly Yours,

Brian Humphrey
Firefighter/Paramedic
Public Information Officer
Los Angeles Fire Department

PS: My e-mailbox is already overflowing with mail on this matter, and I cannot possibly offer a personal reply to all. Thanks!!

>Heath VF-1 VFO's: Dead equipment from a dead company.

Apparently you're not aware of the number of users of vacuum-tube
gear. The newest rra newsgroup reflects the growing interest in
the older gear. The combined BA email lists contain over 2 kilo-
readers. Tube-related posts on rec.radio.swap are a large portion
of all the amateur-related articles (two VF-1 ads appeared on .swap
today).

We're seeing a new interest in such equipment mainly due to the
ability of the user to keep it running all on his own - the gear
is easy to trouble shoot and actual component replacement is effort-
less - something quite difficult to do with today's rigs.

Now, I've got an HG-10. I'll be awaiting your comments comparing
and contrasting it to the VF-1.

ditto on that. They are much better than the old 49MHz phones. If Ric never had to change channels, he was lucky. In subdivisons, you have to search repeatedly to find a clear spot on 49MHz.

I don't have much problem with 900 MHz. I always have a clear channel. But I disagree about the privacy. Always assume someone can hear you if you are using a radio circuit.

Distance-wise, I get a full city block with mine, which is much more than 150 feet. Actually, it is more like 500 feet. And it is quiet all the way to the end of the range. No problem with flour'st lites, etc.

Enforcing covenants is at preceeding at law. That means, in plain English, one party must sue the other. A homeowner association cannot take direct action. they can write a letter demanding the antenna be removed, but they cannot legally touch it. A court must decree that the antenna is a violation and order it removed. Even then, if the offender does not comply, the homeowner association cannot remove it themselves.

This is a matter for a good attorney.

>on the front windshield....but not sure how to route
>the coax.

This may be your best bet, though you CAN mount
an antenna on the rear deck with a metal plate underneath,
BUT (and I can hear you cringing from here) I really
wouldnt wanna drill into a Vette body. The body is
a bit thick for most mounts anyway.

Though in the past, I have done this very same thing for
my customers when I was in the commercial radio and
IMTS mobile phone business. Yep, back in the stone
age pre-cellular phone days.

As far as routing the coax, and the lack of suitable trim
to hide it, get some "coax seal" or "vapor wrap" butyl
rubber tape and mold it around the coax as it goes down
post - it will stick and hold it in place. Have done in on
various vehicles, such as the fibreglass hatches of Cherokees
that have no other way of routing cable. It is not pretty, though
it DOES work. (hey , quit snickering!)

Good luck

The test case has already been. Here in San Diego a couple years ago.
The FCC took the HAMS HT for using it to call for help on the Sheriff
freq's.

Can't remember if they actually prosecuted but it was written up in QST
and others.

Actually, in that case, it was the Sheriffs office that confiscated
the radio, in exchange for no prosecution.

The FCC was present, but the Sheriffs office did the deed.

Dick, Tucker still owns Tucker....but he got out of the ham radio
business and sold his ham radio inventory to Ham Radio Outlet. All
that stuff from Tucker is pretty much sold now.

I believe he is still in the test equipment business.

HRO sells the Larsen reinstall kits.

"Popular Communications", October edition, page 34:

The New England Wireless & Steam Museum in East Greenwich, Rhode Island, was recently taken over by film crews from WGBH television for a PBS documentary about the role of wireless in the rescue of over 1500 people from the sinking of the Cunard steamer Republic in January 1909. The ship collided with the steamer Florida in dense fog. Mock-ups of the Republic's wireless cabin before and after the collision were created for the documentary. And simulations of the 'Sconset, Nantucket station and others using authentic working Marconi equipment were filmed. It's expected that the documentary will be aired in January, 1999.

An original working spark gap transmitter was moved to the New England Wireless & Steam Museum from Point Judith, Rhode Island. The museum hosts a "Yankee Tune-Up" get-together every spring for radio amateurs and historians along with a traditional "Yankee Steam-Up" every fall that features flywheel steam engines from the 1800s. Museum founder and president, Robert W. Merriam, received the 1998 Antoinette F. Downing Volunteer Service Award from the Rhode Island Historical Preservation Commission for his life-long dedication to the preservation of wireless and steam for future generations. Visit the Museum's Website at http://users.ids.net/~newsm to learn more about the museum and coming events.

Seems as though things are looking up at the ARRL. With two
anonymous trolls leaving, the ratio of losers to amateurs just
dropped a little. Maybe we'll get lucky and they'll sell their
amateur gear.

Fwd from dx-list:

Good news from Africa!

I received an email from Jacky F2CW who has been Asmara for the past few weeks. He received a letter from the Ministry of Transport & Communications stating that Amateur Radio is officially open in Eritrea as of September 21st, 1998. The only "bad" news is that the license fee has currently been set at $500!

Jacky will probably pay the fee and get his license today. If this happens, he will only be QRV for one night on SSB only (his current rig does not have CW capability). He leaves for Djibouti on Wednesday morning for business for one week and will try to be QRV in his free time as J28CE. He will be back in Eritrea in a week and will then operate some more with a TS50 which is currently being shipped to him.

His callsign will probably be E30AA, as the Ministry is assigning calls starting with E30AA for visitors and E31AA for citizens. QSL via ZL3CW/F2CW.

Good luck in the pileups!

SB QST @ ARL $ARLB076
ARLB076 Hurricane Georges hits Puerto Rico and moves on

ZCZC AG76
QST de W1AW
ARRL Bulletin 76 ARLB076
From ARRL Headquarters
Newington CT September 22, 1998
To all radio amateurs

SB QST ARL ARLB076
ARLB076 Hurricane Georges hits Puerto Rico and moves on

Reports from the Caribbean indicate the worst is over in Puerto Rico in the wake of Hurricane Georges, which wreaked extensive damage to the island Commonwealth. ''It looks like Puerto Rico took it pretty hard,'' said Hurricane Watch Net Manager Jerry Herman, N3BDW, in Miami.

The Hurricane Watch Net is active on 14.325 MHz and receiving reports on the storm's progress and effects. The storm is headed for landfall today on the island of Hispaniola, which includes the Dominican Republic and Haiti. Herman said the storm should lose some strength as it moves over the mountains there today, but added that it could regain strength once it clears Hispaniola.

In Puerto Rico, Ruth Madera, KP4ENJ, near San Juan reported ''trees are down by the hundreds'' and some roofs were damaged. The apartment house where she and her husband Victor, KP4PQ, live suffered minimal damage, but the estimated 110 MPH winds shook the building, Madera said. Victor Madera, an ARES member, said local hams made use of KP4ES at the National Weather Service. He said there was not much rain, but heavy rain is forecast. ''We have the SKYWARN group working, we have ARES working,'' he said.

Tens of thousands of Caribbean residents took refuge in shelters. ''This time, the residents went to the shelters the day before,'' Victor Madera said. At least five people died in Puerto Rico. Another death was reported on St Kitts. The storm churned up 20 foot waves, knocked over power lines, broke windows, downed trees, and blew away roofs. Victor Madera said power is out at his location, and they have no water either. But telephone service has been mostly operational, minimizing the need for ham radio backup.

In the Netherlands Antilles, Don McGehee, PJ8DM, reported a 175 MPH wind gust on Saba when the storm passed by earlier this week. Some damage was reported in the British Virgin Islands, but the US Virgin Islands reportedly suffered only minimal damage.

Virginia ARES has activated to provide the American Red Cross Headquarters near Washington, DC, with communication support associated with Hurricane Georges. The Level III activation is a general callup (CQ) for emergency assistance, according to Virginia ARES/RACES Director Frank Mackey, K4EC. ARES membership in the activation area should contact their ARES officials or representatives as soon as possible. Local repeaters should be monitored for assistance requests and notifications.

As part of this callup, Virginia hams will monitor various emergency nets and report via the Internet or packet relevant information through Virginia ARES to the Red Cross. The Red Cross uses the information to plan its disaster response.

Yes indeed, but tell the rest of the story. Give us the frame rate and the horizontal and vertical resolution of those early systems.

In a 10 kHz bandwidth (using DSB AM, which the early systems did), and with a frame rate of 8 frames per second (bad flicker unless you use a long persistence phosphor, and then you get motion smear), you can get a grey scale picture that is roughly equivalent to 25 pixels by 25 pixels. If you knew a priori what you were supposed to be seeing, and squinted your eyes just right, you could convince yourself you were watching TV. But it wasn't anything like what we consider TV today. It wasn't even anything like what we consider SSTV today.

Farnsworth's early efforts weren't even black and white. They were black and green. And the geometry of the display tube was pretty poor. It was likened to viewing a picture through the bottom of a coke bottle. But Farnsworth's system embodied the principles which underlie analog TV today. The huge amount of development effort that went into going from those early wavering images to today's pictures is nearly unprecedented.

These early systems had about 625 pixels per picture. As a reference point, the default VGA picture has 307,200 pixels. That's roughly the same as NTSC TV resolution as received at home (roughly because analog TV doesn't have pixels in fixed positions, hence no jaggies). But to get that sort of resolution, you need a bandwidth of about 2.5 MHz for the luminance channel. (Then you add color and sound.) NTSC in the studio is better than what you see at home by about a factor of 3, and the in studio video bandwidth is about 6 MHz. We don't transmit at full bandwidth, however, and your receiver doesn't recover all the bandwidth that we do transmit, due to achievable SNR in the analog transmission system.

That's all set to change. With DTV, you see essentially the same picture that we see in the studio. It is about 3 times sharper than the analog signal you see now, and has virtually no snow or ghosting.

And that's just standard resolution. With HDTV, we can give you a picture which is equivalent to a good 35mm movie picture, about 4 million pixel equivalent resolution. That's real photo realism. And we can still do it in a regular TV channel bandwidth thanks to coding gain and symbol overloading in the modulation constellation. (We do pay a bit of a price for that. There are some motion artifacts and a slight bit of pixelation. But the artifacts are an order of magnitude less than those afflicting analog NTSC, even in the studio.) You're going to be amazed.

4602. Protest to the FCC!!

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-22 00:00:00 UTC
From: captain_crunch@my-dejanews.com
Message-ID: <6u93d5$jb5$1@nnrp1.dejanews.com>
Source record: 161303

There is a protest afoot in this great land!
A protest to the FCC. We want to send a message
to them that we are sick and tired of their
lack of enforcement! We want to send a message
to the FCC that we're tired of the garbage!
The more people who participate in this little
protest, the more we send a clear message to the
FCC and Congress that we're mad as hell and we're
not going to take it anymore!

The protest is easy. Just say your callsign
backwords! Nothing cryptic or illegal about
that. Anyone can easily figure out who you
are. But imagine if thousands of hams started
giving their callsigns backwards! It would be....
revolutionary!

I know....it's only symbolism over substance....
but it just might get their attention!

Example: W9ABC becomes CBA9W

Now...go take on the day.....

CC

Reckon on UPS taking much longer than you'd think, earlier this year I called into the Sunnyvale HRO store and got them to ship me some stuff to Florida, it was a close call, it arrived on the Friday and I was sweating as I was due to leave on the Monday. I gathered there was some mix-up in the marking, so it read like deliver some time may be --- it took 10 days.
On previous occasions, the stuff arrived in Florida way ahead of me. The good thing about shipping to a state where there is no HRO, is you don't have to pay Calif. state tax and shipment is F.O.B.

4609. A ?? of compensation

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-22 00:00:00 UTC
From: kf2ti@planet.net
Message-ID: <MPG.1071ec0fd1f163609896a4@news.planet.net>
Source record: 161310
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

In light of recent discussions as to compensation for amateur activity, an other scenario.

The activity is a major running race. Within the volunteer force are sag wagons (vehicles that transport runners who's feet poop out) In each vehicle is an amateur operator who's job is to relay to the driver where the next pick up is. The driver uses his/her own vehicle and is given a chit for gas. Both the driver and the ham are given T-shirts to identify them as race officials.

Now the question. If the following year, the ham is also the driver of his own car, is the gasoline considered compensation?? Is the person a ham operator who drives a sag wagon or a sag wagon driver who happens to be a ham?? Is it considered compensation if the accepted practice is to provide the gas to the sag wagon driver?? For that matter, the T-shirt..is it considered compensation?? T-shirts seem to be given out at ALL functions

Just curious

Are you willing to be one of the "Elmers" who teaches them by
example and gentle explanation why they are doing something
laughable or are you just one of the bystanders who will be
hurling rocks?

How long have YOU been a ham ?? (46 years for me, the last 40
on "local 2 meter repeaters".)

Why not buy a dual band HT. There are many around new and used at $200.00
and up for new and around $150.00 for used.

Alan
KA2PVR

PS:
You will find meters more friendly, unless you are involved in a group has a
uhf repeater.

>73 de Jason Togyer KB3CNM

If there is a ribbon cable soldered to the board, check it. I had a PLL doing that on another rig and it turned out to be one broken wire in a ribbon cable at the place it is soldered to the the board. Since I had dropped this rig the vibration was the likely reason, but it didn't show up right away, and later developed symptoms like you describe.

>A protest to the FCC. We want to send a message
>to them that we are sick and tired of their
>lack of enforcement! Forum

Remember when the FCC had a hard time enforcing those original CB call letters? Solution was to eliminate them...no more problem.

Since the FCC has poor funding that may not be the place to complain since they have little budget for enforcement. Probably the Congress is the place, but be careful because if those people ever really took a look at the way ham radio is today, they might just abolish it or at best considerably reduce the bandwidth....no more problem.

If I understand what I have been reading, the digital TV stations will be able to put one of those digital high definition channels in their allowed bandwidth or several digital channels of poorer quality. If true, my guess is poorer quality will prevail as there will be more advertising space. Hope I'm wrong.

4618. IPS Daily Report - 22 September 98

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 22/2330Z SEPTEMBER 1998 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 22 SEPTEMBER AND FORECAST FOR 23 SEPTEMBER - 25 SEPTEMBER
STATUS INDICATORS SOL:GREEN MAG:** RED ** ION: **YELLOW**

1A. SOLAR SUMMARY
Activity 22 Sep: Low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number for 22 Sep: 141/95

GOES satellite data for 21 Sep
Daily Proton Fluence >1 MeV: 1.5E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 1.40E+06 (normal)
X-ray background: B3.5
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
23 Sep 24 Sep 25 Sep
Activity Low Low Low
Fadeouts Possible Possible Possible

Forecast 10.7 cm flux/Equivalent Sunspot Number for 23 Sep: 145/99
COMMENT: Isolated low level M class flares possible. Solar wind
speed showed increase last half of UT day, currently mildly elevated
at 440 km/sec. The north-south component of the interplanetary
magnetic field is currently southward.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 22 Sep: Quiet to unsettled

Estimated Indices 22 Sep : A K
Learmonth 9 2222 2233
Fredericksburg 15
Planetary 15

Observed Indices 21 Sep : A K
Fredericksburg 10
Planetary 14 2344 3332

2B. MAGNETIC FORECAST
Date Ap Conditions
23 Sep 12 Unsettled, with active periods possible.

24 Sep 20 Active, minor storm periods possible local night.
25 Sep 20 Active, then declining.
COMMENT: IPS Geomagnetic Warning 31 was issued on 22 September
and is current for interval 23-25 September. Increased activity
expected due to coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
22 Sep Normal Normal Normal
PCA Event : No Proton/PCA Event In progress

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
23 Sep Normal Normal Fair
24 Sep Normal Fair Fair-Poor
25 Sep Normal Fair Fair-Poor
COMMENT: HF conditions are now expected to be normal for today.
Degraded HF conditions expected mid to high latitudes local night
24 Sep in association with expected geomagnetic activity.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
22 Sep 85

Observed Australian Regional MUFs:
near predicted monthly values

Predicted Monthly T index for September: 89

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
23 Sep 90 near predicted monthly values
24 Sep 90 near predicted monthly values
25 Sep 80 near predicted monthly values/depressed 10 to 15%
COMMENT: HF conditions are expected to be near normal until 24-25
Sep when mild degradation in HF conditions expected for southern
region (mid to high latitudes).

The Canberra Amateur Packet Radio Group (CAPRG) in conjunction with the VK1 WIA will present the 1998 VK1 Amateur Radio Symposium

On Sunday November 22 at the Charnwood Scout and Guide Halls commencing at 0900 hrs.

There will be two streams of presentations, and some of the planned topics for the day are:

Amateur Radio and the Year 2000 Olympics
QRP Operation
Building an 80m Transceiver
What is the Print Handicapped Radio Station?
Analogue Satellites
TPK for Beginners
PACTOR
SSTV
Digital TV
Tracking Down Radio Interference
APRS

A presentation pack, lunch, and morning and afternoon teas will be provided in the $25 entry fee. An early bird entry fee of $20 is available up until 10 November 1998 and can be obtained by sending you name, address, callsign and $20 to VK1KCK at 17 Ogden Close FADDEN ACT 2904.

Hopefully we will get enough interest for a fox hunt or two on Saturday afternoon, and if so the planned start time and location will be advised in a later broadcast.

There is still room for a couple more speakers, so if you wish to help please get in touch with Mike, VK1KCK.

A partners' tour, visiting various Canberra tourist-attractions will also be arranged. The tour will co-incide with the symposium, so your better half will be entertained too, whilst you attend the technical presentations.

And if you have any questions relating to the Symposium please get in touch with Mike also. Mike can be contacted by e-mail at mikew@netspeed.com.au, by phone at (02) 6291 2552, and by snail mail at 17 Ogden Close, FADDEN ACT 2904.

Source record: 161380

Hey,

I am looking for any interesting information on the new ICOM Q7A mini HT. I have searched DejaNews, search engines, but really didn't come up with all that much info. Although I did find the schamatic for the OPC-782 Plug at <http://www.hamradio.cz/rigs/Dilna/icom/OPC-782/index.htm> There is more info on that page on the Q7A, but it is not in English. I have seen a *REALLY* cool "unofficial" page on the VX-1R, but nothing on the Q7A. Someone should start an "Unofficial ICOM Q7A Page." The only "trick" I have found which is undocumented is you can hold down BAND at power up and the LCD test will run. Hold the BAND button for as long as you want all the characters to be lit up. Anyone got any others? Any comments on getting cellular reception on the Q7A? Images? Possible full band restoration? Please share your thoughts here, and please also email me with them (AOL really isn't the best server, you know...)

Take Care

4629. FT-1000 vs. IC-746

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-22 00:00:00 UTC
From: rj3@nospam.earthlink.net
Message-ID: <36071fdb.518426@news.earthlink.net>
Source record: 161381

To KM0T,

Regarding your post regarding the comparison of the ICOM's to the Yaesu FT-1000..... I would definitely go with the ICOM-746.....

(Which I did!) I tried an FT-1000, and had a lot of problems with it's very fussy antenna tuner.. I can tune most any radio with my antennas, but NOT an FT-1000 !! It must be looking at a VERY good matched antenna, with an SWR of 3:1 or better..

For what it's worth, the 746 tunes all very well, and a heck of a radio........Rick N1QQ

4632. WANTED ICOM 900 OR 901 RADIO

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-22 00:00:00 UTC
From: JERRY YOUNG <JEYOUNG@HIGHLAND.NET>
Message-ID: <36073FF7.4D1F9E56@HIGHLAND.NET>
Source record: 161384

LOOKING FOR A ICOM900 OR 901 RADIO WITH OR WITHOUT BAND UNITS.
EMAIL ME AT JEYOUNG@HIGHLAND.NET

THANKS JERRY-KB4PNG

4633. Television in the 1930's - from a 1933 Radio Physics Book

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-22 00:00:00 UTC
From: wmunsil@aztec.asu.edu
Message-ID: <6u7fml$iv0$1@news.asu.edu>
Source record: 161385

In 1933 television signals were being transmitted on the short wave bands between 100 and 150 Meters (2 to 3 Mc). They used the scanning disk methods and required a whopping 36 Kc bandwidth.

The Farnsworth System utilizing the cathode ray tube was claimed to take only a 10 Kc bandwidth. Wide band audio amplifiers were required.

1933 - Radio Physics Course, second edition, tenth printing (1944). Written by Alfred A Ghirardi, BSEE and published by the Radio & Technical Publishing Co, 45 Astor Place, New York, NY.

4637. Need Manual and Pinouts for Kenwood TK-230 (Ht)

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-22 00:00:00 UTC
From: hingram@amel.tds.net
Message-ID: <36079e45.534938@news.tds.net>
Source record: 161389

Name here is Sean, Kd4Adv

I am looking for a manual and pinouts for the Kenwood TK-230 HT

The mic pin-outs allow field programming through use of either a
programming "block" or software cable interface to a PC.

The front of the radio has a keypad with DTMF capabilities and an
8-character alpha-numeric display

[1] [2] [3] [F]

[4] [5] [6] [S] - SCAN

[7] [8] [9] [L] (lamp); also D/A -in programming mode.

[*] [0] [#] [E] (enter) also S/M in programming mode.

ANY information on or about the radio will be greatly appreciated

It performs on the Amateur 2-meter band really good.
Freq. range is 136 - 174 MHz Xmit/Rcv with user programmable PL tone

Tnx

Sean, Kd4Adv

Once more we agree Mr Kelly, and I would suggest further that the Public Info Officer from LAFD could go a long way in the current USA President's Spin room. I never saw water so muddied so quickly. Obviously the HOA cannot just destroy anothers property, but seems the LAFD has lent support in this crime.

Mr. Khalil may have a case against both entities. At any rate, he should end up with one skookum anttena system.

>Who was it that said if you repeat The Big Lie often enough it becomes truth
>in itself?

Paul Joseph Goebbels, the Nazi propaganda minister.

He found that no matter how absurd the statement, if you repeat it often enough, and overlay it with sufficient emotional connotations, many people will believe it. One of the reasons that the Big Lie technique works so well is that people find it hard to think rationally about emotionally laden subjects. Instead, they will uncritically adopt slogans which resonate with their emotional biases. This is how hate groups operate, and is how religious movements are perpetuated.

Morse testing proponents have used this technique for decades to imbue Morse code, and the role testing of operator speed plays in amateur licensing, with mythic properties that any dispassionate objective observer can easily see are pure nonsense. The commonly held Morse Myth that Morse will get through when nothing else will is an example of the Big Lie at work. The claim that amateur radio would be CB without Morse testing is another example of the Big Lie at work.

For the Big Lie to work, a large segment of the target audience must fail to think critically and rationally about the subject. That is unfortunately a common trait of those with a large emotional investment in a particular belief system. They are willing to accept on faith statements for which they have no objective proof.

Uncritical thinkers often rely on correlation without examining causation in drawing conclusions. For example, there is a near 100% correlation showing that crack cocaine addicts drank milk as children. To the uncritical mind, the faulty inference could be drawn that drinking milk leads to cocaine abuse. A similar argument has been made for Morse testing. It goes that those with good behavior in amateur radio have sometime in the past passed a Morse speed test. The faulty conclusion is then drawn from that correlation that Morse speed testing selects for good behavior.

The critical thinker can quickly dispell such faulty conclusions by showing confounding correlations. For example, the fact that Extras have received a disproportionate share of Notices of Apparent Liability from the FCC in comparison to any other license class is a confounding correlation. In fact, a case could be made from that correlation that Morse speed may select for bad behavior, though I'd caution that absent a cause and effect linkage that conclusion has no more basis than the one claiming Morse speed selects for good behavior.

To prove a cause and effect relationship, mere correlation is insufficient. A mechanism must be demonstrated which links cause and effect. No such mechanism has been shown to exist between Morse speed testing and good behavior. The only sure thing we can conclude about Morse speed testing is that it selects for Morse operator speed.

As with drinking milk as a child, we can expect that most current amateur HF operators have passed a Morse test. But as is the case with the cocaine addict, we haven't shown a cause and effect relationship between drinking milk and cocaine abuse, or between passing a Morse speed test and good behavior as amateurs. It is just an accepted mythos, fed by the Big Lie technique of the Morse speed testing proponents.

What Rod Stafford was talking about, and the reaction many older amateurs have expressed to it, is called Future Shock. This is a malady suffered by those unable to adapt to increasingly rapid change. Communications and electronic technology are changing very rapidly today. It should be unsurprising that the institutions utilizing them must change too. Change is life, unchanging things are dead things. For those set in their ways, accepting change is hard.

Tim,

Some strange things like this do happen.

This is off topic but there was an instance locally where a giant national
fast food franchise located here then decided that a tree on a close piece
of private property was obstructing the view of their sign. The property
owner refused all monetary offers from this fast food giant to have the
tree removed, and as I understand it, the final offers were pretty
substantial. The fast food giant then took it upon themselves to top the
the tree while the property owner was on vacation. The final court ordered
settlement was reported to be less than what was offered in the first
place.

The moral?

If you are big enough, do what you want to do at the time, and settle
later after you got what you wanted.

SB QST @ ARL $ARLB077
ARLB077 Florida hams brace for Hurricane Georges

ZCZC AG77
QST de W1AW
ARRL Bulletin 77 ARLB077
From ARRL Headquarters
Newington CT September 23, 1998
To all radio amateurs

SB QST ARL ARLB077
ARLB077 Florida hams brace for Hurricane Georges

Hams in Southern Florida were standing by Wednesday afternoon, ready to respond as Hurricane Georges moves toward the US from the Caribbean. At 1900 UTC the storm's eye was located approximately between the islands of Hispaniola and Cuba.

Southern Florida Section Emergency Coordinator Manny Papandreas, W4SS, said he expects the Southern Florida Emergency Net to activate Wednesday evening. He said it appears that Hurricane Georges could end up affecting the Florida Keys and then Florida's West Coast, but the storm's precise course was uncertain Wednesday afternoon. ''We don't know where this thing is going to go,'' he said. ''All the local nets have been activated almost every evening. Everything so far in the section is on standby.''

Residents and visitors to the Florida Keys were evacuated Wednesday and some schools were closed. A hurricane watch remains in effect for South Florida from Deerfield Beach southward on the East Coast and from Bonita Beach southward on the West Coast, including the Florida keys. The hurricane's destructive winds and rains cover a wide swath.

Papandreas said SKYWARN nets are standing by on both Florida coasts as the storm approaches to track any tornadoes it might generate. ''The SKYWARN operators are extremely valuable, particularly during the daytime, for tornado warnings,'' he said.

Meanwhile, the Hurricane Watch Net on 14.325 MHz has been keeping track of the storm and filing its reports with the National Hurricane Center via W4EHW. KE4JCU/HH4 in Haiti reported that his location was on the back side of the storm with high winds from the due south. ''I don't want to overestimate it, but it's really howling through here,'' he told the net control. US Amateurs on

other HF nets have been handling health and welfare traffic for concerned relatives in the US.

More than two dozen people are reported dead in the Caribbean islands hit by the storm. Reports indicate many parts of Puerto Rico are without electrical power.

Virginia ARES, which provides communication support during emergencies to American Red Cross Headquarters, has downgraded the level of its activation. The Virginia ARES activation was reduced from Level III to Level II as commercial communications improve in US territories affected by the hurricane. Virginia ARES/RACES Director Frank Mackey, K4EC, says Virginia hams monitor various emergency nets and report relevant information via the Internet or packet through Virginia ARES to the Red Cross. The Red Cross uses the information to plan its disaster response.

4661. Suggestions on amp design?

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-23 00:00:00 UTC
From: l2jarvis@mindspring.com
Message-ID: <36098a67.36430187@news.mindspring.com>
Source record: 161264

Hello,

I'd like to build an amp for my recently completed 20M SSB QRP rig;
something in the neighborhood of 25W. I've found that 2 watts will do
wonders on CW, but not so for SSB!

I'm considering an MRF426 (NPN bipolar 28V, 50mW in, 25W out), but
would prefer a push/pull arrangement with two devices in a TO-220
style case case. This would require that each device dissipate about
25W each. Can a TO-220 case do that?

I'm not adverse to FETS, though I've never built a FET amp. I saw an
interesting circuit using two IRF511's, but that device is very
inefficient above about 10MHz.

Any suggestions?

Thanks, and kind regards,
Lee - KN4VN

Well, it is simple really, just start a fox hunt for an illegal transmitter
and you have the location.....and when you have a dozen different people
with
the capabilities to do it, that usually tips it off....

Also that techniqe is used when a ham's radio is stolen....if they installed

an automatic id'er....then you can track down where it is....it is really
obvious when another ham stole it, as I have heard about it too......

Source record: 161270
Cross-posted to: rec.radio.amateur,rec.radio.amateur.antenna,rec.radio.amateur.policy,rec.radio.amateur.misc

I have a opportunity that Amateur Radio Operators living in a community that has anti-antenna Covenants, Conditions and Restrictions can only dream about! I have won the right to put my antennas up!

Even better, I have been able to convince them that the existing Covenant (an
all out ban on radio and television antennas) could be struck down because of the recent Federal laws in regards to Broadcast and Satellite Antennas (CFR Title 47 1.4000).

I've proposed and they are willing to consider, that I craft (or obtain) a set of Covenants that address the matter.

What I need is a sample set of Covenants to propose to my Home Owner's Association. I hoping that somebody has already drafted such a document.

If not, I'll need input for creating a set that a typical Ham could live with, but would still give the Non-Hams warm, fuzzy feelings.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 23/2330Z SEPTEMBER 1998 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 23 SEPTEMBER AND FORECAST FOR 24 SEPTEMBER - 26 SEPTEMBER
STATUS INDICATORS SOL:** YELLOW ** MAG:** RED ** ION: ** YELLOW **

1A. SOLAR SUMMARY
Activity 23 Sep: High

Flares Max Fadeout Begin End Freq. Sectors
M6.9/3B 0713UT probable lower Mid East/Indian

Observed 10.7 cm flux/Equivalent Sunspot Number for 23 Sep: 143/97

GOES satellite data for 22 Sep
Daily Proton Fluence >1 MeV: 1.4E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 2.50E+06 (normal)
X-ray background: B3.5
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
24 Sep 25 Sep 26 Sep
Activity Moderate Low to moderate Low to moderate
Fadeouts Probable Possible Possible

Forecast 10.7 cm flux/Equivalent Sunspot Number for 24 Sep: 150/105

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 23 Sep: Quiet to unsettled

Estimated Indices 23 Sep : A K
Learmonth 12 2333 3232
Fredericksburg 12
Planetary 12

Observed Indices 22 Sep : A K
Fredericksburg 6
Planetary 10 1142 2332

2B. MAGNETIC FORECAST
Date Ap Conditions
24 Sep 20 Active, minor storm periods possible local night.
25 Sep 50 Unsettled to active with minor to major storm
levels expected later in the UT day.

26 Sep 30 Minor storm levels possible early in UT day,
then declining.
COMMENT: IPS Geomagnetic Warning 32 was issued on 23 September
and is current for interval 25-27 September.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
23 Sep Normal Normal Normal
PCA Event : Flare characteristics suggest PCA event likely,
however, expected increased proton flux levels
have not yet eventuated but may occur during the
early part of the UT day on September 24.

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
24 Sep Normal Fair Poor
25 Sep Poor Poor Poor
26 Sep Fair Poor Poor
COMMENT: Short-wave fadeouts may be experienced on daylight HF
circuits.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
23 Sep 88

Observed Australian Regional MUFs:
Depressed up to 30% during the local day at Darwin,
otherwise mostly near normal at all stations.

Predicted Monthly T index for September: 89

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
24 Sep 75 near predicted monthly values/depressed 5 to
10%
25 Sep 50 10 to 20% below predicted monthly values
26 Sep 25 20 to 30% below predicted monthly values
COMMENT: IPS HF Communications Warning 54 was issued on 23 September
and is current for interval 25-27 September. Short-wave fadeouts
may be experienced on daylight HF circuits.

>> licensing of foreign hams wishing to operate in the US, pursuant to
>> recent international reciprocal operating agreements.
>
>Anyone know what this is about? Is the CEPT or something different?
>And does anyone know any details such as timetable etc?
>

Mostly CEPT, but from the way it's phrased, any country with an agreement to automatically grant privileges to US amateurs apparently can expect the FCC to grant privileges to its licensed nationals automatically upon implementation of the proper treaty or protocol. In other words, the CEPT countries can enter and leave just like Canadians presently can.

4672. ic706(noMK) vhf MARS help

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-23 00:00:00 UTC
From: xjim@my-dejanews.com
Message-ID: <6u9ip0$3mm$1@nnrp1.dejanews.com>
Source record: 161322

I have an ic706(noMK), and have done all Mars mods as/artsci - ie R353, Q38, ic32 jumper wire, d59--but am unable to split tx and rx for 2m MARS repeater. Have tried a/b split but the radio seems to think that below 144, 144-148, 148+ are different band segments and wont "crossband" around 144-148, as with Mk2. Is there a hardware fix for this?

Take us back to 1958 and tell us what 2m repeater you operated on. As far as I know, the only rptr on the air in the late 50s was Art Gentry's 2m AM rptr (K6MYK) in Los Angeles.

Let's read a a couple paragraphs from Art's obituary:

ARTHUR M. GENTRY, W6MEP, SK
The ham that gave each and every one of us the ability to communicate over repeaters has died at age 89. Arthur M. Gentry, W6MEP, passed away about three weeks ago in Beaver, Oregon of natural causes. Only a month earlier he and his wife Millie, K6JJN, had moved to Oregon to be with their grandchildren.
It was back in the late 1940's that Art Gentry began experimenting with receiver designs that would permit hearing signals on the same band that a nearby high power transmitter was operating. By the late 1950's he had developed the needed hardware to put the first practical voice repeater into operation from atop Mt. Lee overlooking Los Angeles, California. Gentry's designs were adopted by both the Amateur and Commercial Land Mobile services and lead to a revolution in voice relay communications that prospers to this day...

So tell us Phil, were you in Los Angeles in 1958 operating on Art's 2m AM rptr? If so, what was your W6 call back then?

Though not a lawyer, my estimation is that reimbursement of actual expenses would not be classed as compensation. The t-shirts are often used to identify folks who are 'officials' for the event and therefore should not considered compensation. This situation is one where a judge would be wise to apply the 'spirit' of the law versus the 'letter' of the law.

just my opinion,
Howard

Thank you to all who replied, on the ng and in email -- and especially
to Ed N1IXB, who sent the repair and owner's manuals.

Incidentally, the problem seems to be a cold solder joint or a broken
trace in the PLL area of the main board -- the PLL is unlocking
intermittently, and pressure on that area of the board makes the problem
come and go.

This is has been pesky to cure so far, but thanks to you folks, at least
I have a direction now (like knowing *which* area of the board the PLL
circuitry is in!) and some background about how the radio works.

Ah, these hamfest "bargains"...

Where I used to live there was a company that sold parts
for making wine barrels and related equipment. The stainless
steel parts (nuts, bolts, washers, other fasteners and pipe)
were so inexpensive is was amazing.

Hello

I am going over to the states next week and I am going to stay in irving, Texas.

Since this is my second time in the US, (first time was Dayton Hamvention Last year) I am looking for ham radio people over there and also for the local 2 meter and 70cm repeaters.

Any help is appreciated.
I allready arrange an alien license and I can use my own callsign.

Well, I have rec'd a lot of mail and see some posts about a listing I placed... not sure what all groups. I've had some trouble with my server the last few days and it has apparantly had a seizure and belched out 20 copies of the same post...(I assume this is the problem.. the upset individuals are not great communicators...) I've posted, bought and sold here for some time and never dreamed that something like this could happen, I've always met intelligent, polite people.... what the heck happened???
At any rate, I must apologize to the group for any hang-ups the problem has caused, whatever it was. Could someone of better temper and maturity please email and let me know if there truly is a problem and what I can do to fix it? I would appreciate it.
As for the folks who emailed and posted those beautifully worded messages.... I say this: Before flying off the handle on someone about something that is (to me) not a life-changing experience and no big deal, you should have asked, instead of posting a useless msg and wasting even more space....like an idiot, no? It never ceases to amaze me, how quickly people feel free to act 'tough' when they assume the other person will never be standing in front of them in 'real' life..... You don't know me or who I am. I could be living in walking distance of you. You need to grow up, get up from your computer once in a while and not take this so seriously... None of it will matter in the large scope of things, anyway. There's a whole world out there, full of real people. Go check it out sometime.
It's funny..... 20 people who have no idea who I am are feeling free to be rude, and not one person pointed out the problem or asked if it was an accident or if I needed help.. I 've managed to piece together what it was anyway. thanks a lot, guys.
Again, if there truly is a problem of some kind, I apologize to the group.
Sorry I had to post this msg as well.
thanks,
Randy
p.s. Thanks to the folks who answered the posts... I'll be getting back to ya as soon as I can.

And the rapid operation of a SPST switch moves us beyond this somehow? I believe this operation was originally used in wireless with spark gaps.

This is the satellite news group. Packet, SSB and some FM, CW are used here. I believe some companded SSB might make RS-15 usable, but I am still working on a external unit for this.

Well, what do you know, a person with nad's from the other side of the debate.

I am impressed! To bad you had to stoop to character assignation right out of the chute. While I do agree with your stance that Tech's spend to much time on two meter FM, I cannot believe you felt your position was so poor that you could not impart any facts pertinent to the situation.

This is the satellite newsgroup. Two meter FM is not really the subject. Some CW is, but not much.

It would be fun to read, I suppose, but you must understand that I have limited resources and can't afford to travel much more than one or two hundred miles, under most circumstances. So reports about LidOps in other parts of the country would not be immediately useful to me.

Also, "Self Policing" is not something to be approached lightly. I will have to personally verify any reported info I might recieve before even considering what action would be most appropriate. Personally, I will consider any bogus reports I may recieve as being originated by a LidOp, and procede from there.

My thought is to do as you have mentioned, and start building a support network for Hams who are willing and able to do what is needed. I think a good start would be a Web page dedicated to the purpose of encouraging and enabling organized self-policing by Hams.

Once a support network is in place, I think we will discover that "coax cutting parties" will seldom if ever really be neccessary. A common problem today is that LidOp Hams hardly ever hear any of the complaints against their operating practices. Decent Hams complain to each other about a particular LidOp a thousand times, but seldom have anything to say directly to the Lid. A support network can change that situation, and turn it around to the benefit of the hobby.

Also, an organized Wouff Houng Society would send a clear message to the FCC:
" Lead, follow, or get the heck out of the way."

Who knows? Maybe they will.

I'll throw together a Web page, and announce the URL later today. There's no time for getting started like right now.

I've gotten a used dual port KAM that came without a manual.

Is there anyplace to download a copy of the manual?
A quick diagram of the HF and VHF radio wiring connections
would help get me going

It has version 2.72 firmware installed. Back in the deep recesses
of a dark desk drawer, I found a KAM version 3.0 chip. Any info on
what modes these old versions support?

Any information will be useful.

Thanks - Dave.

Hi Al, and others who may be interested,

Get a copy of the latest edition of the ARRL Antenna Book and check out the program MOBILE.EXE that is packaged with it. It allows you to plug in various parameters regarding the design of mobile antennas. A VERY useful program for those who "roll their own." It should be useful for evaluating a "bugcatcher" type coil.

You can simulate placement of the antenna on the vehicle, change the dimensions of the coil, change the size of the antenna components and watch the efficiency of the antenna change. The program will tell you the approximate shunt capacitance needed to match the antenna to the transmission line. In addition, as you change the coil dimensions, you will see the Q change.

If you do a lot of mobile operating, it will be worth the cost of the book for the computer program alone.

October, 1992 QST, Page 45 had a good article on homebrewing large coils for mobile antennas. There have been others, but I don't have a complete bibliography handy.

Hope this helps.

SB QST @ ARL $ARLB078
ARLB078 Florida hams continue hurricane vigil as Caribbean begins recovery

ZCZC AG78
QST de W1AW
ARRL Bulletin 78 ARLB078
From ARRL Headquarters
Newington CT September 24, 1998
To all radio amateurs

SB QST ARL ARLB078
ARLB078 Florida hams continue hurricane vigil as Caribbean begins recovery

As hams in Southern Florida wait for Hurricane Georges to make up its mind, preparations continue on along both Florida coasts to deal with the storm's effects. Mobile home residents in the Broward County-Fort Lauderdale and Miami-Dade County areas have been ordered evacuated. As many as 500,000 people in low-lying areas have been urged to seek shelter on higher ground. The storm was sitting over the eastern end of Cuba at 1500 UTC Thursday.

The Hurricane Watch Net remains active on 14.325 MHz to coordinate storm reports with W4EHW at the National Hurricane Center. Hurricane Watch Net Manager Jerry Herman, N3BDW, says the net got good reports from Cuban hams Wednesday evening. ''CO2KK, Arnie, was passing radar data and observations that the Hurricane Center was not getting from official sources,'' he said. Georgia Section Manager Sandy Donahue, W4RU, handled net control duties on the net Wednesday evening.

''The storm is taking a toll on operators who are beginning to get tired,'' Herman reported. ''We have also lost Don, PJ8DM, on Saba, whose station was knocked out by the storm.''

Another net is handling health and welfare traffic on 14.283 MHz.

Southern Florida Assistant SEC Jim Goldsberry, KD4GR, reports he is holding two daily sessions of the Southern Florida ARES Net, mornings and evenings on 3940 kHz. If it becomes necessary to activate the Florida Emergency Operations Schedule, the net will shift to 7242 kHz during daylight hours (at the net's discretion), Goldsberry said.

The Broward County emergency operations center was activated Thursday morning. Broward County RACES Officer Robin Terrill, N4HHP, is contacting ARES and RACES members to assist at shelters, if needed. N4HHP also is providing communication for the EOC in anticipation of a full activation.

Hams also are coordinating with the Red Cross. In addition, Broward County EC Harold Sanderson, KT4XK, has been holding special sessions of the Broward County Emergency Preparedness Net to keep area hams informed and ready. Hams also are reported in active preparations in other coastal counties. Two hams were reported ready to maintain their locations on Big Pine Key, although authorities have evacuated the Florida Keys.

Meanwhile, hams in Puerto Rico are assisting in the aftermath of Hurricane Georges, which inflicted heavy damage in parts of the Commonwealth earlier this week. Some amateurs have been able to return to the airwaves. ''Hams have made a difference here,'' reports Rafael Medina, NP3HA, in Guaynabo. Medina says he used the WP4KYP UHF repeater to make contact with WP4EZC who, in turn, contacted his relatives to inform them his family was okay. ''I also use the repeater to contact people on the center of the island to gather information and needs form the counties there,'' he said. He also reports VHF repeater traffic to coordinate local needs. ''Civil Defense is using hams to operate the repeater to gather information from different regions of the island,'' he said. ''They are providing service to the police and medical services.'' Medina said government agencies are taking advantage of communication capabilities provided by ham repeaters that have remained up. Power was knocked out over much of Puerto Rico, and telephone service remains spotty.

According to Internet reports, Hurricane Georges took out five ham radio towers at the QTH of well-known contester Pedro Piza, NP4A.

If you are so tired of all of this, then stop posting about it.

If you've read any of the recent ARRL bulletins, you'd see that HF operators are busy relaying traffic on the various HF nets. The frequencies being used are in the General Class subbands. Since you have frequently stated that no "pro-coders" ever help out in emergency situations, this should be a big wake-up call to you.

Julian

Actually no it does not. The ADMS 1C covered the FT-50 which uses the exact cable adapter you need for the VX-1. I had the same problem when I bought a VX-1 I had the cable but not the software. RT will only sell the software with the adapter cable which I didn't need.
They also use a very chicken shit copy protection scheme that makes it very hard to backup and restore your hard disk. This can be dealt with but you have to be a little savvy to do so.

Hey Burt,

Apparently the FCC doesn't agree with you.

Just yesterday, in remarks at the Personal Communications Industry Association of America's PCS '98 in Orlando, Florida, FCC Commissioner Susan Ness promoted the notion that "the value to the public of certain spectrum uses does not always translate into pure economic terms."

"For example, we need to ensure that adequate spectrum is available for public safety purposes, for the Amateur Service, and for experimental and scientific purposes," Ness said.

A TS-440SAT sells for about $600. with no power supply. You might get a 430 for $350. but I'm not sure about that. A power supply by itself sells for around $150. Good luck in your research.

Disaster frequencies:

With Hurricane Georges wreaking havoc in the Gulf, it is worth repeating that you can find many hurricane-related radio frequencies at the Hurricane Frequencies web site. Bookmark the page now, and it will be there when you need it.

Hurricane Frequencies is a list of more than 200 selected frequencies below 30 MHz that carry hurricane-related traffic during the hurricane season.

Times and frequencies are subject to frequent change, and are listed for reference only. Updates are published as information becomes available.

The list includes
- Amateur radio emergency and disaster nets (ARES, RACES, etc)
- U.S. federal, state and military agencies
- U.S. Coast Guard weather and nets
- National Hurricane Center, FAA, FEMA
- Commercial weather broadcast stations
- SSB, CW, FEC-SITOR and facsimile modes

Several links to current tropical storm information are provided.

You will find the Hurricane Frequencies site at:
http://members.ecom.net/~snyder/index.htm

Ah yes, after posting my reply I looked back and saw that it was indeed the Cecil I was speaking of. After some problems with my internet connection I've lost touch with the QRP-L crowd, though I sense that they're still alive and well....old farts never die, they just smell that way.<g> I caught the article in QST about the 22-2222 xceiver...looked interesting. Tell Cecil I said hello (or if you're reading the group "howdy" to you Cecil!).

And yes, his take on the control issue is pretty much on target...personally I believe gun-control is tight groups at 300 yards. ;)

Anyhow, it's a shame somebody of his class was insulted by a member of a group that sorely needs such expertise. I take it he still "dabbles" with his wires?

4737. Coil Q of BugCatcher HF coils

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-24 00:00:00 UTC
From: nw2m@qsl.net
Message-ID: <6ucbfh$tf4$1@nnrp1.dejanews.com>
Source record: 161281
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc

Does anyone know the advertised or measured Q of the Texas BugCatcher 40 or 80 meter coils. I have read much of the ARRL publications which depict HF mobile efficiencies which are highly dependent on coil Q (figure or merit).

I also see that the capacily hat is normally placed directly on top of the coil, exactly the WORST place to put it as it detunes the coil-Q due to stray capacitances with the capacity hat.

I had GREAT success with the Stealth HF Mobile Antenna (Fortex Corp) going to the Dayton Hamvention. Mounted to the top of my van, 4 ground straps, 14'overall height, and 100 watts from a TS-50 mobile, we had 100% QSO from the DC area thru Western Marlyand, PA, and thru to Dayton. I was very impressed, and pleased as we addressed EVERY issue the ARRL had to say about HF mobile antenna performance. I also had no idea that moving the base of the antenna from the bumper to the roof doubles the efficiency of these antennas on the 80m and below bands. Yes, the formulas and the math also support the ARRL performance data.

The thing I cannot measure is Q. So, I want to use an existing model (BugCatcher) as a reference. I will try to "roll" my own.

Thanks in advance on coil Q. Post here or email. :-)

To N4UCM and others:

I had tried an FT-3000 for xmit on 450 to come out on 2 meters...

Unfortunately, there is a built-in 2 second delay when you unkey!!!

This will keep a 2 meter repeater keyed up for 2 seconds after you release your mike. Very annoying to me and others!! I called Yaesu and they said it could be fixed, but it had to be shipped to the factory for a new microprocessor..

Stock: 2 second delay. Second option: 5 sec. delay. Third option: no delay.. There is no other way to change it.. THAT kept me from keeping my FT-3000 !!!

4743. Today's ham radio

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-24 00:00:00 UTC
From: burt@imfamous.com
Message-ID: <6ud6h5qiv1@nnrp1.dejanews.com>
Source record: 161287
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

Dear Editor,

There was a time when amateur radio provided a public service in training operators for military service, technicians for industry, fostered international goodwill and carried emergency communications. This rarely is true any longer. The technology has long ago left hams by the roadside. Today amateur exams are so simple children who can barely read can pass the test. All questions AND the answers are published in multiple choice format. The examinee knows the actual questions and answers ahead of time. The average age of today's ham is well over 50 whereas when I was first licensed the average age was 27. Hams are still communicating at 1200 baud when internet users fly along at 40 times that speed. As far as international goodwill, most hams rarely ask a foreign station anything more than what his equipment is, they do not care about culture, lifestyle or anything that really matters. Hams usually want the "credit" for having talked to 100 or 200 or more foreign countries (did you know both Hawaii and Alaska are separate "ham" countries?). If you have a scanner listen to frequencies between 145 MHZ-148 MHZ and listen to the content of the conversation. These are valuable frequencies that other public service and commercial interests could use PRODUCTIVELY. Cell phones have replaced the need for most emergency ham communications in this country. Hams use many other frequencies for little more than a discussion of personal medical ailments. Hams are required to serve the public but in fact they are serving themselves almost all the time. Worse they cause interference to other services (like your TV) and they erect large towers and guess what, there is nothing you can do about it. The F.C.C. is too underfunded to respond to citizen interference complaints and the ham radio lobby (American Radio Relay League) has caused both state and federal governments to pass laws that prohibit towns from controlling these large antennas.

The frequencies that hams use are for the use of everyone not their personal
fiefdom. It is time Congress conducted hearings and investigated whether ham radio has
become the vast wasteland (a term that former F.C.C commissioner Newton Minow popularized).

From: WA2RCB@N3ACL.#SEPA.PA.USA.NA
To : K1OIK@K1UGM.#EMA.MA.USA.NA

Yes, DX'ers are a unique breed of people Burt. My guess is that
if their wife was next door in the kitchen gagging on a piece of
fried chicken bone, and there was a rare-dx station on the air
at *ezactly* the same moment, 98% of the DX'ers would choose to
let their XYL's writhe on the floor and turn screen-saver VCR *blue*
first before missing the opportunity to work Kuntakintae in Lower
Gibipp. Reminds me of a funny event from a few years ago, when I was
a Director in a radio club. Had a director's meeting at this guy
house. After the business was over, went into this guy's shack.
(He was a big-time DX'er here in NJ - having worked 300-something
countries) He seemed to get somewhat irritated when I did not
share his enthusiasm for DX. After the 3rd attempt to get me to
pay some kind of hommige to him while sticking a *framed* QSL in
my face from some filthy rich ham who runs a sweatshop in Puerto
Rico who spends 98% of his time running to mud-huts in Africa in his
Lear jet. I then told him I did not give a rat's --- about DX. (I only
did this because he was so damm adamant about DX as being as important
as the second comming or something...) Well, I thought he was going to
toss me out of his QTH, but he seemed to not have the gutz for that, so
I retired to his living room to drink as much soda and chips he put out
and laugh about this whole incident with 2 friends of mine who were
there and shared my humor ove this whole screwball funny incident.
(he has put out several pint-size bottles of Coca-Cola...I had my CIA
type trench coat with me, and pocketed 3 of them just for funzies...)
So Burt, there U go, DX'ers: Ham radio's greatest mutual admiration
society. Almost as bad as contesters who run illegal power...birds of
a feather...

73es George wa2rcb

ps: Got on the Net. Not sure about how to E-Mail yet, as I'm new to this
I-Net stuff, but, I am enjouing the discourse's on rec.radio Keep
up the good woik Burt! :) :) :) :) :) :) :)

4745. Re: Policing ourselves?

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-24 00:00:00 UTC
From: Charles Brabham <n5pvl@texoma.net>
Message-ID: <6ud5n0$ako@enews4.newsguy.com>
Source record: 161289

Robert Casey wrote in message ...
>Ah.... "self policing" means that you as an individual know and obey
>the rules yourself. You stop yourself from violating the rules.
>NOT policing other hams yourself.

Well, Robert, if that's what you are willing and able to handle, I won't fault your efforts. One is much better than none. I will point out though, that as Hams we have a responsibility to the hobby in a wider, more general sense.

Unfortunately, not all Hams are ready, willing, or able to "police themselves" in the personal sense you made mention of. The FCC has proved to be unwilling or unable to "police" those individuals. Parts of 20 and 75 meters have been unusable by legal, legitimate Hams for years, and repeater abuse has "blossomed" as certain Hams have discovered just how much they CAN get away with.

Many of us are ready to assist the Ham community in a more effective, thorough fashion, though, and that's who I was talking to. You can go back to sleep now.

Contradiction:

1. Morse is a great mode. It is fun and it is valuable. It goes
when everything else fails !

2. By removing the morse requirement, no one is going to learn morse
anymore. By removing the morse requirement, probably not many will be
using morse anymore.

Whoever says 1&2 at the same time, clarify this. If morse is fun
and valuable, don't get feared for taking the requirement out.
Everyone will be using morse then... yeah right... it's fun eh...
yeah... fun fun fun.... !!!!! Get a life.

4753. Y2K Preparedness Manual for households and small business owners

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-25 00:00:00 UTC
From: bmatlock@my-dejanews.com
Message-ID: <6ughm1$a90$1@nnrp1.dejanews.com>
Source record: 161148

I found a great Y2K Preparedness manual - http://www.dfwconnect.com/y2k. Most sites talk about what will happen and how bad things will get. But, this is one of a few who offer information that will help you, your family and community get through outages and disruptions in services. I bought the manual and it was the best $20 I've spent in a long time. The author condenses over 20 years of military and government experience into an easy to read logical approach. Good luck.

Remind everyone involved of the inverse square law. Make it clear that
RF exposure, and potential RFI, is reduced by taller antenna structures.
This benefits everyone. Perhaps a covenant should state that no antenna
be allowed which is mounted less than 75 feet above any dwelling structure.
Verbiage about good engineering practice in the installation of towers is
likely a good idea too since it makes the insurance carriers have warm
and fuzzy feelings.

ZCZC AP39
QST de W1AW
Propagation Forecast Bulletin 39 ARLP039
From Tad Cook, K7VVV
Seattle, WA September 25, 1998
To all radio amateurs

SB PROP ARL ARLP039
ARLP039 Propagation de K7VVV

Solar activity was up somewhat over the past week. Average sunspot numbers increased by almost 27 points, but solar flux was up by just under three points. The geomagnetic field was quite a bit more active this week compared to last due to solar flares and coronal holes. The day with the most geomagnetic activity last week was September 18, when the planetary A index was 20 and the K index went as high as 6.

The trend for the short term is for more activity. Solar flux for September 25 to 27, Friday through Sunday is expected to be 150, 155 and 155, while the major geomagnetic storm is expected to continue with planetary A indices of 25, 30 and 20. As this is being written on Thursday night, the Boulder K index is six, indicating a major storm, and the planetary A index for the day was 28. The high latitude A index was 51.

Solar flux is expected to peak around September 29 and 30 at 165, then drop to 150 by October 3, and bottom out around 120 from October 12 to 14.

This solar cycle is continuing it's upward climb, and a nice graph which shows the general trend over the past year can be seen at the Northwest Research Associates site at www.nwra.com/nwra/spawx/ssne-year.html. Recent and predicted short term 10.7 cm flux is graphed at the same site at www.nwra.com/nwra/spawx/f10.html.

The most important event for the last week affecting HF propagation was the passage into the fall season, which always means an improvement in high frequency propagation. The other important news was the resurrection of the Solar and Heliospheric Observatory which is again facing the sun. Until recently the outlook for SOHO was

bleak, but now scientists hope to restore much of it's capacity for solar observation.

Sunspot Numbers for September 17 through 23 were 100, 106, 133, 130, 151, 154 and 162 with a mean of 133.7. 10.7 cm flux was 117.4, 122.5, 126.9, 132.1, 138.3, 141.1 and 143.2, with a mean of 131.6, and estimated planetary A indices were 7, 20, 12, 8, 14, 10, and 14, with a mean of 12.1.

You will also notice how he accuses this "fellow ham" of one thing
(above), then quotes the email, which says something else (below).

> >"You can get that information without listening to HF, that is true.
> >But the information most likely *originated* on HF, sent by hams. It
> >is these organizations that then pass on the information via the TV and
> >the Internet"

Maybe Masa would consider putting the above quote in context? Maybe what
was being discussed was hams who use HF to assist such agencies as the
National Weather Service, the Red Cross, SkyWarn, or FEMA?

Maybe Masa just doesn't have a clue.

Julian

>about getting a message to them.

1. The American Red Cross sometimes can help with Health/Welfare traffic.

2. See recent ARRL bulletins posted to this NG for 20 meter nets which are operating.

3. Someone in the affected area might be allowed ONE outbound message. Advise the family that whomever gets that one message should alert the remainder of the family.

Best wishes,
K5PF

FLORIDA HAMS AWAIT GEORGES; CARIBBEAN RECOVERY BEGINS

Hurricane Georges spent the week wending his way through the Caribbean islands, leaving death and destruction in his wake. By week's end, hams in Southern Florida were ready along both Florida coasts to deal with the storm's anticipated effects. The likely track September 25 put the brunt of the storm over the Florida Keys. From there, forecasters believed, it could move on to trouble the Gulf Coast, the Florida Panhandle, and perhaps other Gulf states. Mobile home residents in the Broward County-Fort Lauderdale and Miami-Dade County areas were evacuated. As many as 1-million people in low-lying areas were urged to

seek shelter on higher ground. Two hams were reported ready to stand their ground on Big Pine Key, despite the evacuation.

Southern Florida Assistant SEC Jim Goldsberry, KD4GR, scheduled morning and evening sessions of the Southern Florida ARES Net on 3940 kHz. Arrangements were being made September 25 to possibly declare a communications emergency. Southern Florida Section Emergency Coordinator Manny Papandreas, W4SS, said SKYWARN nets were ready on both Florida coasts to track any tornadoes Georges might generate.

The Broward County emergency operations center was activated September 24. ARES and RACES members were ready to assist at shelters and provide communication for local EOCs. Hams also coordinated with the Red Cross. In addition, Broward County EC Harold Sanderson, KT4XK, held special sessions of the Broward County Emergency Preparedness Net to keep area hams informed and ready. Hams also were reported in active preparations in other coastal counties. But Georges was pretty much of a bust in the Ft Lauderdale area, reports League member Charlie Geib, N4AV. While the storm generated lots of rain, he said damage appeared to be minimal.

Since Georges arrived in the Caribbean, the Hurricane Watch Net has run continuously on 14.325 MHz to coordinate storm reports with W4EHW at the National Hurricane Center. Another net has been handling health and welfare traffic on 14.283 MHz. Hurricane Watch Net Manager Jerry Herman, N3BDW, says the net got good reports from Caribbean hams, including Cuba's Arnie Coro, CO2KK. "Arnie, was passing radar data and observations that the Hurricane Center was not getting from official sources," he said. (Arnie Coro, CO2KK, also was interviewed by CBS Radio about the storm situation in Cuba.)

Oscar Morales, CO2OJ, said the storm took out power and telephone service in some provinces. "More than 200 hams worked with the Civil Defense authorities all around the island and played an important role in communications during the disaster," he said. Morales said he was gratified at the level of cooperation among hams in working together to exchange information on the storm. "I'm really proud of being a ham radio operator!" he said.

Hams in Puerto Rico are assisting in the aftermath of Hurricane Georges, which inflicted heavy damage in parts of the Commonwealth earlier this week. "Hams have made a difference here," reports Rafael Medina, NP3HA, in Guaynabo. Medina used a local UHF repeater to contact another ham with HF capabilities who, in turn, contacted Medina's relatives to inform them his family was okay. With widespread telephone outages, Medina says ham radio is being used to keep contact with the center of the island to gather information and needs from the counties there.

Medina said Civil Defense used hams to operate a VHF repeater to gather information from different regions of the island. Hams also were assisting police and medical services, he said. Medina said government agencies took advantage of communication capabilities provided by ham repeaters that have remained up. Power was knocked out over much of

Puerto Rico, and telephone service remained spotty at week's end. Water service also was disrupted over much of the island. ARES member Victor Madera, KP4PQ, said that during the storm, local hams made use of KP4ES at the National Weather Service. Hams also activated SKYWARN and ARES nets.

According to Internet reports, Hurricane Georges took out five ham radio towers at the QTH of well-known contester Pedro Piza, NP4A.

Tens of thousands of Caribbean residents took refuge in shelters. Even so, more than 200 deaths were reported throughout the Caribbean, many of them in the Dominican Republic and Haiti.

In the Netherlands Antilles, Don McGehee, PJ8DM, reported a 175 MPH wind gust on Saba when the storm passed over. Both Saba and St Eustatius were hit very hard by the hurricane, but there were no casualties. Power and telephone service are out over much of the Netherlands Antilles. "The only communication with the outside world is via radio," said Jacobo Oduber, P43P. He said the Aruba ARES repeater was being used to maintain communication among St Maarten, Saba, and St Eustatius. Some damage was reported in the British Virgin Islands, but the US Virgin Islands reportedly suffered only minimal damage. Virgin Islands Section Manager John Ellis, NP2B, said power was knocked out, and long-distance phone service went down. "We passed about 100 messages to the states," he said. Phone service to St. Thomas, St. Croix and St. John was fully restored by week's end, but phone circuits remained busy.

Virginia ARES was activated to provide communication support for American Red Cross Headquarters near Washington, DC. As part of the callup, hams monitored various emergency nets and reported relevant information through Virginia ARES to the Red Cross. The Red Cross used the information to plan its disaster response.

The Red Cross lifted its normal 48-hour moratorium on health-and-welfare inquiries for immediate family only on Puerto Rico, St Thomas/St John, and St Croix on September 24. Inquiries must be submitted on ARC Form 2079 (rev. 8/95). Forms should be faxed to 800-782-7060.

FCC ADOPTS UNIVERSAL LICENSING SYSTEM

Amateurs can say good-bye to the FCC Form 610 series in a few months. The FCC has adopted its long-proposed Universal Licensing System, which replaces Form 610 with a new, electronic Form 605, the Quick-Form Application for Authorization in the Ship, Aircraft, Amateur, Restricted and Commercial Operator, and General Mobile Radio Services. Applicants may continue to use the old forms for six months after the new rules go into effect, however.

The FCC also adopted proposals to permit automatic reciprocal licensing of foreign hams wishing to operate in the US, pursuant to recent international reciprocal operating agreements.

The FCC said the ULS will "fundamentally change" the way the Commission receives and processes wireless applications and makes licensee information available to the public. The rules adopted September 17 will--in the FCC's words--"consolidate, revise, and streamline" license application procedures for radio services under the Wireless Telecommunications Bureau. The FCC last November began initial collection of licensee data to populate the ULS. Using the ULS, applicants and licensees will be able to file, modify, and renew electronically. Access to the ULS is via http://www.fcc.gov/wtb/uls/.

When the FCC first aired its ULS plan, some licensees expressed concerns because ULS registration would require applicants to provide a Taxpayer Identification Number, typically a Social Security Number. In its public notice, the FCC assured that "all TIN information will be kept confidential."

The FCC's action consolidates 40 existing forms into four ULS application forms, including the new Form 605. Electronic filing in the ULS will not yet be mandatory for individual amateurs. Hams will have the option of filing electronically or on paper. However, electronic filing via the ULS will be required for Volunteer Examiner Coordinators in the Amateur Service. Mandatory electronic filing requirements go into effect July 1, 1999 or six months after the use of ULS in a particular service--whichever is later.

An official Report and Order detailing the FCC's actions is expected to be released soon. The FCC's Public Notice is available on the FCC Web site at
http://www.fcc.gov/Bureaus/Wireless/News_Releases/1998/nrwl8040.html.

SWEEPS BAND CHANGE RULE WON'T BE ENFORCED THIS YEAR

The ARRL Contest Department will not enforce a new general band-change rule for the 1998 ARRL November Sweepstakes because of what it called "widespread confusion" within the contesting community. The General Rules for All ARRL Contests, published in the December 1997 QST, limit multioperator Sweepstakes entrants to no more than six band changes per hour, a change from previous years. As defined by Sweepstakes rules, even some solo operators must enter in the multiop category. "If you use packet, you go immediately to multiop class," said ARRL Membership Services Manager Bill Kennamer, K5FUV. The Sweepstakes rules only allow one transmitted signal at any given time.

While the General Rules were included by reference in the 1998 ARRL November Sweepstakes Rules in the October 1998 QST, the announcement did not emphasize the change. As a result, Kennamer says the League will not enforce the six-band-changes-per-hour rule this year.

"Because of the change in the way the rules are published, and because we feel that all participants may not have been fully informed about the differences between the multioperator category of the past and the current rule, for this year only, the band change limitation will not be enforced," Kennamer said. But, he added, "unless something changes,

we'll enforce it next year."

Single ops who do not use packet spotting networks in their quest for a clean sweep will not be affected by the rules change, Kennamer said.

For further information Contact Bill Kennamer, K5FUV, e-mail bkennamer@arrl.org.

LOWER VANITY FEE BOOSTS APPLICATIONS

According to FCC numbers out of Gettysburg earlier this month, the new, lower vanity call sign application fee induced an additional spurt of applications from the typically thrifty ham radio community. The FCC reports getting 281 applications on September 14, the first day of the new $13 fee, and another 78 applications the next day.

That's in sharp contrast to the 130 or so applications received between August 25 and September 2. In fact, during all of August, the FCC received just shy of 600 vanity applications.

IOY: IT'S EASIER THAN EVER!

Nominations for the Instructor of the Year awards are due to section managers by January 31. Now, it's easier than ever to nominate an exceptional ham radio instructor, teacher or recruiter to receive one of the four annual awards! The ARRL Educational Activities Department has revised the forms. Questions now are easier to answer, to the point, and ask exactly what the impartial officials need to know to make a selection. Each award nomination requires endorsements and testimonials from others, and new forms in the package take the guesswork out of what to write.

Of the four annual awards, two are for instructors. One recognizes paid instructors, such as those teaching through adult education, while the other recognizes an unpaid volunteer instructor. A third award recognizes a teacher who incorporates ham radio into a school curriculum. The fourth award goes to a person who has gone the extra mile to introduce people to Amateur Radio.

To get nomination forms, visit the Educational Activities Department Web site, http://www.arrl.org/ead/award/application.html or contact Jean Wolfgang, tel 860-594-0219; e-mail jwolfgang@arrl.org.

Award winners receive a handsome plaque and recognition for their time and effort in service to the ham radio community. Runners-up get a certificate.

JAMBOREE ON THE AIR '98 IS OCTOBER 17-18

On the third weekend of October, more than 400,000 Scouts around the world are expected to get together on the air during the 41st international Jamboree On The Air (JOTA). The annual event gives ham radio veterans a chance to plant the seed of ham radio in the minds of Scouts gathered at stations set up in fields, parks, mountaintops, or

even at the veteran op's own shack, to participate.

Remember your first ham radio contact? Experienced hams can give that feeling to future ham radio operators during JOTA by showing Scouts the fun they could have if they embark on a "hobby of a lifetime." JOTA runs from Saturday, October 17, at 0001 local time to Sunday, October 18, at 2359 local time. This means activity continues from Friday to Monday, because of the time differences. During JOTA, participating Scouts not only get a chance to talk to other Scouts in their community or state, but they might even be able to chat with Scouts in different countries!

The radio station of the World Scout Bureau, HB9S, will be on the air from Geneva, Switzerland. HB9S will operate almost continuously, but will take breaks during the night in Europe. Groups can contact the station via packet at HB9S@HB9IAP or via e-mail to Station Manager Yves Margot, jota@world.scout.org. Operators at HB9S say they will do the best they can to make contact with Scout stations worldwide and speak to scouts in as many languages as possible.

JOTA can be a club activity or an individual project. Individual hams who want to get involved should make arrangements with Scout leaders a few weeks in advance (to get contact information, call the local Scout office and make yourself available to your local Cub Scout Pack, Girl or Boy Scout Troop or Explorers). The ARRL Educational Activities Department offers a JOTA information package on the ARRLWeb at http://www.arrl.org/ead/jota.html.

JOTA can sometimes be an outdoors activity like Field Day. The occasion gives veteran hams a chance to set up antennas and demonstrate different modes of radio communication, including packet, RTTY, SSTV, and HF digital modes, as well as voice.

JOTA activity on HF will center around 3740 or 3940, 7290, 14290, 18140, 21360, 24960, and 28990 kHz on SSB or 3590, 7030, 14070, 18080, 21140, 24910, and 28190 kHz on CW. For more JOTA information, see http://www.scout.org/jota/. --Jean Wolfgang, WB3IOS; Frank Krizan, KR1ZAN

NEW ARRL SITE PROVIDES YOUTH WITH A PLACE TO MEET

A new page on ARRLWeb aims to take advantage of youth interests in computers and the Internet to offer younger hams a place to get together online to arrange on-the-air schedules. Amateur Radio youth groups can just visit the Youth Skeds Database at http://www.arrl.org/ead/youthskeds/ and make skeds with other schools or young people's groups. The ARRL Educational Activities Department credits Phil Downes, N1IFP, for coming up with the idea. Regardless of age, grade level, school or group affiliation, youngsters worldwide can register at this site. This adds them to the list of groups wishing to get acquainted with others via Amateur Radio.

"The purpose of this particular ARRLWeb page is to answer a growing need, thanks to the wide Amateur Radio interest on the Internet," said

ARRL Educational Activities Correspondent Dan Miller, K3UFG. "This is a meeting place for youth groups wishing to interact, and contact each other via Amateur Radio. This can be schools at any level, or scouts, or CAP, or any youth auxiliary club."

At the Youth Skeds home page, entering a state (without entering a city) makes it possible to scan a statewide list of groups who have registered. Or you can pinpoint an area by entering a city and state.

"This is a brand new service of the ARRL and is available to all Amateur Radio youth groups, whether they are affiliated with the ARRL or not," Miller said. "Of course, becoming affiliated would provide additional benefits, but the decision is theirs."

Miller says he'll be happy to provide additional information. Call him at 860-594-0340; e-mail dmiller@arrl.org.

SOLAR UPDATE

Solar savant Tad Cook, K7VVV, in Seattle, Washington, reports: Solar activity was up somewhat over the past week. Average sunspot numbers increased by almost 27 points, but solar flux was up by just under three points. The geomagnetic field was quite a bit more active this week compared to last due to solar flares and coronal holes. The day with the most geomagnetic activity last week was September 18, when the planetary A index was 20 and the K index went as high as 6.

The trend for the short term is for more activity. Solar flux for September 25-27 is expected to be 150, 155 and 155, while the major geomagnetic storm is expected to continue with planetary A indices of 25, 30 and 20. As this was being written on September 24, the Boulder K index is 6, indicating a major storm, and the planetary A index for the day was 28. The high latitude A index was 51.

Solar flux is expected to peak around September 29 and 30 at 165, then drop to 150 by October 3, and bottom out around 120 from October 12-14.

This solar cycle is continuing its upward climb. A nice graph which shows the general trend over the past year can be seen at the Northwest Research Associates site at http://www.nwra.com/nwra/spawx/ssne-year.html. Recent and predicted short-term 10.7 cm flux is graphed at the same site at http://www.nwra.com/nwra/spawx/f10.html.

The most important event for the last week affecting HF propagation was the passage into the fall season, which always means an improvement in high frequency propagation. The other important news was the resurrection of the Solar and Heliospheric Observatory which is again facing the sun. Until recently the outlook for SOHO was bleak, but now scientists hope to restore much of its capacity for solar observation.

Sunspot numbers for September 10 through 16 were 123, 134, 118, 111, 106, 71, and 86, with a mean of 107. The 10.7-cm flux was 141.7, 138.6,

134.9, 130.7, 121.8, 117.3, and 118.7, with a mean of 129.1. The estimated planetary A indices were 5, 5, 12, 6, 6, 7, and 4, with a mean of 6.4.

Sunspot numbers for September 17 through 23 were 100, 106, 133, 130, 151, 154, and 162, with a mean of 133.7. The 10.7-cm flux was 117.4, 122.5, 126.9, 132.1, 138.3, 141.1, and 143.2, with a mean of 131.6. The estimated planetary A indices were 7, 20, 12, 8, 14, 10, and 14, with a mean of 12.1.

IN BRIEF:

* This weekend on the radio: The CQ WW RTTY Contest, the Heart of Dixie QSO Party, and the Classic Radio Exchange are on tap this weekend. See September QST, page 103, for more information. Just ahead: The California QSO Party, the VK/ZL/Oceania Contest (SSB), and the RSGB 21/28 MHz Contest (SSB) are the weekend of October 3-4. See October QST, page 108, for details.

* IARU Region 2 Conference special event: Special event station YV7AJ will be on the air September 27 until October 3 to mark the IARU Region 2 Conference during that period on Margarita Island, Venezuela. Operation is expected to be primarily on HF. QSL via the Radio Club Venezolano bureau.

* Correction: We had the incorrect Web address for the EROS center in The ARRL Letter, Vol 17, No 37. The correct URL is http://edcwww.cr.usgs.gov/content_about.html

* 1998 "Pack Rat" Conference: Attention VHF/UHF/microwave ops. Hamarama Weekend '98, the Mid-Atlantic States VHF Conference (better known as the "Pack Rat Conference") is set for October 3-4, 1998, at the Hampton Inn, Willow Grove, Pennsylvania, sponsored by the Mount Airy VHF Radio Club. Saturday's program is "packed" with technical presentations, an interesting speaker lineup, and several technical sessions, including noise figure measurements, network analyzers, spectrum analyzers and power supplies. All equipment will be operational up to 10 GHz. Conference presentations will include "Aurora Detector" by Dave Olean, K1WHS; "Patch Antennas," by Chris Fagas, WB2VVV; "High Speed Meteor Scatter," by Maarten Broess, W1FIG, and Steve Harrison, KO0U, and "New Microwave Devices" by Steve Kostro, N2CEI. The Hamarama Flea Market is Sunday at the Bucks County Drive-In in Warrington, Pennstylvania. Additional details are at http://www.ij.net/packrats.--Mt Airy VHF Radio Club

* QST Cover Plaque Award: The August QST Cover Plaque Award went to Wes Hayward, W7ZOI, and Terry White, K7TAU, for their article "A Spectrum Analyzer for the Radio Amateur." Congratulations Wes and Terry!

* Newest Edition of The FCC Rule Book: The new 11th edition of The FCC Rule Book from ARRL includes everything you need to know about the rules

that govern the Amateur Radio Service. This handy tome includes easy-to-read explanations, and it's been updated and reorganized to make it even more user-friendly. The book include all of Part 97 as well as the US Amateur Band Plan, information on repeaters, public service, and interference; technical standards, including RF exposure rules, and much m ore. This latest edition is available in mid-October. Order item 6966. It's just $12. Call toll-free 888-277-5289 or visit ARRLWeb http://www.arrl.org/catalog/.

* Mir packet frequency: MIREX reports the packet system frequency for Mir's PMS system is again 145.985 MHz. Until September 2, the crew had been using 145.940 MHz.

* Michigan club aids bicycle tour: The Big Rapids Area Amateur Radio Club (BRAARC) provided communication during the Michigander Weekender portion of the Detroit Free Press Cross State Mountain Bike Ride in mid-July. More than 1000 cyclists of all ages took part in the weekend event, and some 700 attempted the weeklong tour, the seventh annual. Amateur Radio cyclists contacted the club to help during the weekender, a 44-mile run from Big Rapids to Cadillac and back. Some 20 hams pitched in during the event and helped to handle emergency calls for injuries, spills, exhaustion and heat, as well as more routine traffic.--thanks to William Eckels, W8ZNH/BRAARC

* W0SL to appear in CNN series: Roy Welch, W0SL, of AMSAT fame says he's scheduled to appear in CNN's Cold War series, which starts airing September 27 on the cable grid. There are 24 programs in all. Welch has been told by CNN that his brief shot in the limelight will come during episode 8, "Sputnik," set to air November 15. Welch tells the ARRL's Jennifer Gagne, N1TDY, that his old Sputnik recordings--posted on the AMSAT Web site (http://www.amsat.org) included one from October 1957, when the first artificial Earth satellite was launched. Its presence prompted a call from CNN asking if they could use the recordings and interview him for the production. "I agreed, and they flew me to Washington where I was interviewed and taped," he said. His "15 minutes of fame" actually lasts less than a minute.

* Zack Lau continues to improve: ARRL Senior Lab Engineer Zack Lau, W1VT, continues to improve following his hospitalization earlier this month. "He is in reasonable spirits, and he even laughed at most of my jokes," ARRL Lab Supervisor Ed Hare, W1RFI, said following a recent visit. Friends and well-wishers can e-mail Zack Lau at w1vt@arrl.org. Cards are welcome to ARRL, 225 Main St, Newington, CT 06111.
==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide essential news of interest to active amateurs promptly and efficiently, and in advance of publication in our official journal, QST. The ARRL Letter strives to be fast, accurate, concise, and readable.

Material from The ARRL Letter may be reproduced in whole or in part in any form, including photoreproduction and electronic databases. Credit must be given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, ARRL members should visit the League's Members Only Web Site at http://www.arrl.org/members/ and follow the registration instructions. Registration also provides access to The ARRLWeb Extra, a news and feature magazine.

For members and nonmembers alike, The ARRL Letter also is available free of charge from these sources:

* The ARRLWeb page, http://www.arrl.org/arrlletter/. NOTE: The ARRL Letter will be posted each Friday as soon as possible after publication.

* The Netcom listserver operated by volunteers from the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list". (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via the Netcom listserver.)

* The HIRAM BBS: 860-594-0306. The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published Fridays). For example, to request The ARRL Letter file for Friday, September 4, 1998, type "send ltr0904.txt". Then, on a separate line, type "quit". The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

FLORIDA HAMS AWAIT GEORGES; CARIBBEAN RECOVERY BEGINS

Hurricane Georges spent the week wending his way through the Caribbean
islands, leaving death and destruction in his wake. By week's end, hams
in Southern Florida were ready along both Florida coasts to deal with
the storm's anticipated effects. The likely track September 25 put the
brunt of the storm over the Florida Keys. From there, forecasters

believed, it could move on to trouble the Gulf Coast, the Florida Panhandle, and perhaps other Gulf states. Mobile home residents in the Broward County-Fort Lauderdale and Miami-Dade County areas were evacuated. As many as 1-million people in low-lying areas were urged to seek shelter on higher ground. Two hams were reported ready to stand their ground on Big Pine Key, despite the evacuation.

Southern Florida Assistant SEC Jim Goldsberry, KD4GR, scheduled morning and evening sessions of the Southern Florida ARES Net on 3940 kHz. Arrangements were being made September 25 to possibly declare a communications emergency. Southern Florida Section Emergency Coordinator Manny Papandreas, W4SS, said SKYWARN nets were ready on both Florida coasts to track any tornadoes Georges might generate.

The Broward County emergency operations center was activated September 24. ARES and RACES members were ready to assist at shelters and provide communication for local EOCs. Hams also coordinated with the Red Cross. In addition, Broward County EC Harold Sanderson, KT4XK, held special sessions of the Broward County Emergency Preparedness Net to keep area hams informed and ready. Hams also were reported in active preparations in other coastal counties. But Georges was pretty much of a bust in the Ft Lauderdale area, reports League member Charlie Geib, N4AV. While the storm generated lots of rain, he said damage appeared to be minimal.

Since Georges arrived in the Caribbean, the Hurricane Watch Net has run continuously on 14.325 MHz to coordinate storm reports with W4EHW at the National Hurricane Center. Another net has been handling health and welfare traffic on 14.283 MHz. Hurricane Watch Net Manager Jerry Herman, N3BDW, says the net got good reports from Caribbean hams, including Cuba's Arnie Coro, CO2KK. "Arnie, was passing radar data and observations that the Hurricane Center was not getting from official sources," he said. (Arnie Coro, CO2KK, also was interviewed by CBS Radio about the storm situation in Cuba.)

Oscar Morales, CO2OJ, said the storm took out power and telephone service in some provinces. "More than 200 hams worked with the Civil Defense authorities all around the island and played an important role in communications during the disaster," he said. Morales said he was gratified at the level of cooperation among hams in working together to exchange information on the storm. "I'm really proud of being a ham radio operator!" he said.

Hams in Puerto Rico are assisting in the aftermath of Hurricane Georges, which inflicted heavy damage in parts of the Commonwealth earlier this week. "Hams have made a difference here," reports Rafael Medina, NP3HA, in Guaynabo. Medina used a local UHF repeater to contact another ham with HF capabilities who, in turn, contacted Medina's relatives to inform them his family was okay. With widespread telephone outages, Medina says ham radio is being used to keep contact with the center of the island to gather information and needs from the counties there.

Medina said Civil Defense used hams to operate a VHF repeater to gather information from different regions of the island. Hams also were assisting police and medical services, he said. Medina said government agencies took advantage of communication capabilities provided by ham repeaters that have remained up. Power was knocked out over much of Puerto Rico, and telephone service remained spotty at week's end. Water service also was disrupted over much of the island. ARES member Victor Madera, KP4PQ, said that during the storm, local hams made use of KP4ES at the National Weather Service. Hams also activated SKYWARN and ARES nets.

According to Internet reports, Hurricane Georges took out five ham radio towers at the QTH of well-known contester Pedro Piza, NP4A.

Tens of thousands of Caribbean residents took refuge in shelters. Even so, more than 200 deaths were reported throughout the Caribbean, many of them in the Dominican Republic and Haiti.

In the Netherlands Antilles, Don McGehee, PJ8DM, reported a 175 MPH wind gust on Saba when the storm passed over. Both Saba and St Eustatius were hit very hard by the hurricane, but there were no casualties. Power and telephone service are out over much of the Netherlands Antilles. "The only communication with the outside world is via radio," said Jacobo Oduber, P43P. He said the Aruba ARES repeater was being used to maintain communication among St Maarten, Saba, and St Eustatius. Some damage was reported in the British Virgin Islands, but the US Virgin Islands reportedly suffered only minimal damage. Virgin Islands Section Manager John Ellis, NP2B, said power was knocked out, and long-distance phone service went down. "We passed about 100 messages to the states," he said. Phone service to St. Thomas, St. Croix and St. John was fully restored by week's end, but phone circuits remained busy.

Virginia ARES was activated to provide communication support for American Red Cross Headquarters near Washington, DC. As part of the callup, hams monitored various emergency nets and reported relevant information through Virginia ARES to the Red Cross. The Red Cross used the information to plan its disaster response.

The Red Cross lifted its normal 48-hour moratorium on health-and-welfare inquiries for immediate family only on Puerto Rico, St Thomas/St John, and St Croix on September 24. Inquiries must be submitted on ARC Form 2079 (rev. 8/95). Forms should be faxed to 800-782-7060.

FCC ADOPTS UNIVERSAL LICENSING SYSTEM

Amateurs can say good-bye to the FCC Form 610 series in a few months. The FCC has adopted its long-proposed Universal Licensing System, which replaces Form 610 with a new, electronic Form 605, the Quick-Form Application for Authorization in the Ship, Aircraft, Amateur, Restricted and Commercial Operator, and General Mobile Radio Services. Applicants may continue to use the old forms for six months after the new rules go into effect, however.

The FCC also adopted proposals to permit automatic reciprocal licensing of foreign hams wishing to operate in the US, pursuant to recent international reciprocal operating agreements.

The FCC said the ULS will "fundamentally change" the way the Commission receives and processes wireless applications and makes licensee information available to the public. The rules adopted September 17 will--in the FCC's words--"consolidate, revise, and streamline" license application procedures for radio services under the Wireless Telecommunications Bureau. The FCC last November began initial collection of licensee data to populate the ULS. Using the ULS, applicants and licensees will be able to file, modify, and renew electronically. Access to the ULS is via http://www.fcc.gov/wtb/uls/.

When the FCC first aired its ULS plan, some licensees expressed concerns because ULS registration would require applicants to provide a Taxpayer Identification Number, typically a Social Security Number. In its public notice, the FCC assured that "all TIN information will be kept confidential."

The FCC's action consolidates 40 existing forms into four ULS application forms, including the new Form 605. Electronic filing in the ULS will not yet be mandatory for individual amateurs. Hams will have the option of filing electronically or on paper. However, electronic filing via the ULS will be required for Volunteer Examiner Coordinators in the Amateur Service. Mandatory electronic filing requirements go into effect July 1, 1999 or six months after the use of ULS in a particular service--whichever is later.

An official Report and Order detailing the FCC's actions is expected to be released soon. The FCC's Public Notice is available on the FCC Web site at
http://www.fcc.gov/Bureaus/Wireless/News_Releases/1998/nrwl8040.html.

SWEEPS BAND CHANGE RULE WON'T BE ENFORCED THIS YEAR

The ARRL Contest Department will not enforce a new general band-change rule for the 1998 ARRL November Sweepstakes because of what it called "widespread confusion" within the contesting community. The General Rules for All ARRL Contests, published in the December 1997 QST, limit multioperator Sweepstakes entrants to no more than six band changes per hour, a change from previous years. As defined by Sweepstakes rules, even some solo operators must enter in the multiop category. "If you use packet, you go immediately to multiop class," said ARRL Membership Services Manager Bill Kennamer, K5FUV. The Sweepstakes rules only allow one transmitted signal at any given time.

While the General Rules were included by reference in the 1998 ARRL November Sweepstakes Rules in the October 1998 QST, the announcement did not emphasize the change. As a result, Kennamer says the League will not enforce the six-band-changes-per-hour rule this year.

"Because of the change in the way the rules are published, and because we feel that all participants may not have been fully informed about the

differences between the multioperator category of the past and the current rule, for this year only, the band change limitation will not be enforced," Kennamer said. But, he added, "unless something changes, we'll enforce it next year."

Single ops who do not use packet spotting networks in their quest for a clean sweep will not be affected by the rules change, Kennamer said.

For further information Contact Bill Kennamer, K5FUV, e-mail bkennamer@arrl.org.

LOWER VANITY FEE BOOSTS APPLICATIONS

According to FCC numbers out of Gettysburg earlier this month, the new, lower vanity call sign application fee induced an additional spurt of applications from the typically thrifty ham radio community. The FCC reports getting 281 applications on September 14, the first day of the new $13 fee, and another 78 applications the next day.

That's in sharp contrast to the 130 or so applications received between August 25 and September 2. In fact, during all of August, the FCC received just shy of 600 vanity applications.

IOY: IT'S EASIER THAN EVER!

Nominations for the Instructor of the Year awards are due to section managers by January 31. Now, it's easier than ever to nominate an exceptional ham radio instructor, teacher or recruiter to receive one of the four annual awards! The ARRL Educational Activities Department has revised the forms. Questions now are easier to answer, to the point, and ask exactly what the impartial officials need to know to make a selection. Each award nomination requires endorsements and testimonials from others, and new forms in the package take the guesswork out of what to write.

Of the four annual awards, two are for instructors. One recognizes paid instructors, such as those teaching through adult education, while the other recognizes an unpaid volunteer instructor. A third award recognizes a teacher who incorporates ham radio into a school curriculum. The fourth award goes to a person who has gone the extra mile to introduce people to Amateur Radio.

To get nomination forms, visit the Educational Activities Department Web site, http://www.arrl.org/ead/award/application.html or contact Jean Wolfgang, tel 860-594-0219; e-mail jwolfgang@arrl.org.

Award winners receive a handsome plaque and recognition for their time and effort in service to the ham radio community. Runners-up get a certificate.

JAMBOREE ON THE AIR '98 IS OCTOBER 17-18

On the third weekend of October, more than 400,000 Scouts around the world are expected to get together on the air during the 41st international Jamboree On The Air (JOTA). The annual event gives ham radio veterans a chance to plant the seed of ham radio in the minds of Scouts gathered at stations set up in fields, parks, mountaintops, or even at the veteran op's own shack, to participate.

Remember your first ham radio contact? Experienced hams can give that feeling to future ham radio operators during JOTA by showing Scouts the fun they could have if they embark on a "hobby of a lifetime." JOTA runs from Saturday, October 17, at 0001 local time to Sunday, October 18, at 2359 local time. This means activity continues from Friday to Monday, because of the time differences. During JOTA, participating Scouts not only get a chance to talk to other Scouts in their community or state, but they might even be able to chat with Scouts in different countries!

The radio station of the World Scout Bureau, HB9S, will be on the air from Geneva, Switzerland. HB9S will operate almost continuously, but will take breaks during the night in Europe. Groups can contact the station via packet at HB9S@HB9IAP or via e-mail to Station Manager Yves Margot, jota@world.scout.org. Operators at HB9S say they will do the best they can to make contact with Scout stations worldwide and speak to scouts in as many languages as possible.

JOTA can be a club activity or an individual project. Individual hams who want to get involved should make arrangements with Scout leaders a few weeks in advance (to get contact information, call the local Scout office and make yourself available to your local Cub Scout Pack, Girl or Boy Scout Troop or Explorers). The ARRL Educational Activities Department offers a JOTA information package on the ARRLWeb at http://www.arrl.org/ead/jota.html.

JOTA can sometimes be an outdoors activity like Field Day. The occasion gives veteran hams a chance to set up antennas and demonstrate different modes of radio communication, including packet, RTTY, SSTV, and HF

digital modes, as well as voice.

JOTA activity on HF will center around 3740 or 3940, 7290, 14290, 18140, 21360, 24960, and 28990 kHz on SSB or 3590, 7030, 14070, 18080, 21140, 24910, and 28190 kHz on CW. For more JOTA information, see http://www.scout.org/jota/. --Jean Wolfgang, WB3IOS; Frank Krizan, KR1ZAN

NEW ARRL SITE PROVIDES YOUTH WITH A PLACE TO MEET

A new page on ARRLWeb aims to take advantage of youth interests in computers and the Internet to offer younger hams a place to get together online to arrange on-the-air schedules. Amateur Radio youth groups can just visit the Youth Skeds Database at http://www.arrl.org/ead/youthskeds/ and make skeds with other schools or young people's groups. The ARRL Educational Activities Department credits Phil Downes, N1IFP, for coming up with the idea. Regardless of age, grade level, school or group affiliation, youngsters worldwide can register at this site. This adds them to the list of groups wishing to get acquainted with others via Amateur Radio.

"The purpose of this particular ARRLWeb page is to answer a growing need, thanks to the wide Amateur Radio interest on the Internet," said ARRL Educational Activities Correspondent Dan Miller, K3UFG. "This is a meeting place for youth groups wishing to interact, and contact each other via Amateur Radio. This can be schools at any level, or scouts, or CAP, or any youth auxiliary club."

At the Youth Skeds home page, entering a state (without entering a city) makes it possible to scan a statewide list of groups who have registered. Or you can pinpoint an area by entering a city and state.

"This is a brand new service of the ARRL and is available to all Amateur Radio youth groups, whether they are affiliated with the ARRL or not," Miller said. "Of course, becoming affiliated would provide additional benefits, but the decision is theirs."

Miller says he'll be happy to provide additional information. Call him at 860-594-0340; e-mail dmiller@arrl.org.

SOLAR UPDATE

Solar savant Tad Cook, K7VVV, in Seattle, Washington, reports: Solar activity was up somewhat over the past week. Average sunspot numbers increased by almost 27 points, but solar flux was up by just under three points. The geomagnetic field was quite a bit more active this week compared to last due to solar flares and coronal holes. The day with the most geomagnetic activity last week was September 18, when the planetary A index was 20 and the K index went as high as 6.

The trend for the short term is for more activity. Solar flux for September 25-27 is expected to be 150, 155 and 155, while the major geomagnetic storm is expected to continue with planetary A indices of

25, 30 and 20. As this was being written on September 24, the Boulder K index is 6, indicating a major storm, and the planetary A index for the day was 28. The high latitude A index was 51.

Solar flux is expected to peak around September 29 and 30 at 165, then drop to 150 by October 3, and bottom out around 120 from October 12-14.

This solar cycle is continuing its upward climb. A nice graph which shows the general trend over the past year can be seen at the Northwest Research Associates site at http://www.nwra.com/nwra/spawx/ssne-year.html. Recent and predicted short-term 10.7 cm flux is graphed at the same site at http://www.nwra.com/nwra/spawx/f10.html.

The most important event for the last week affecting HF propagation was the passage into the fall season, which always means an improvement in high frequency propagation. The other important news was the resurrection of the Solar and Heliospheric Observatory which is again facing the sun. Until recently the outlook for SOHO was bleak, but now scientists hope to restore much of its capacity for solar observation.

Sunspot numbers for September 10 through 16 were 123, 134, 118, 111, 106, 71, and 86, with a mean of 107. The 10.7-cm flux was 141.7, 138.6, 134.9, 130.7, 121.8, 117.3, and 118.7, with a mean of 129.1. The estimated planetary A indices were 5, 5, 12, 6, 6, 7, and 4, with a mean of 6.4.

Sunspot numbers for September 17 through 23 were 100, 106, 133, 130, 151, 154, and 162, with a mean of 133.7. The 10.7-cm flux was 117.4, 122.5, 126.9, 132.1, 138.3, 141.1, and 143.2, with a mean of 131.6. The estimated planetary A indices were 7, 20, 12, 8, 14, 10, and 14, with a mean of 12.1.

IN BRIEF:

* This weekend on the radio: The CQ WW RTTY Contest, the Heart of Dixie QSO Party, and the Classic Radio Exchange are on tap this weekend. See September QST, page 103, for more information. Just ahead: The California QSO Party, the VK/ZL/Oceania Contest (SSB), and the RSGB 21/28 MHz Contest (SSB) are the weekend of October 3-4. See October QST, page 108, for details.

* IARU Region 2 Conference special event: Special event station YV7AJ will be on the air September 27 until October 3 to mark the IARU Region 2 Conference during that period on Margarita Island, Venezuela. Operation is expected to be primarily on HF. QSL via the Radio Club Venezolano bureau.

* Correction: We had the incorrect Web address for the EROS center in The ARRL Letter, Vol 17, No 37. The correct URL is http://edcwww.cr.usgs.gov/content_about.html

* 1998 "Pack Rat" Conference: Attention VHF/UHF/microwave ops. Hamarama Weekend '98, the Mid-Atlantic States VHF Conference (better known as the "Pack Rat Conference") is set for October 3-4, 1998, at the Hampton Inn, Willow Grove, Pennsylvania, sponsored by the Mount Airy VHF Radio Club. Saturday's program is "packed" with technical presentations, an interesting speaker lineup, and several technical sessions, including noise figure measurements, network analyzers, spectrum analyzers and power supplies. All equipment will be operational up to 10 GHz. Conference presentations will include "Aurora Detector" by Dave Olean, K1WHS; "Patch Antennas," by Chris Fagas, WB2VVV; "High Speed Meteor Scatter," by Maarten Broess, W1FIG, and Steve Harrison, KO0U, and "New Microwave Devices" by Steve Kostro, N2CEI. The Hamarama Flea Market is Sunday at the Bucks County Drive-In in Warrington, Pennstylvania. Additional details are at http://www.ij.net/packrats.--Mt Airy VHF Radio Club

* QST Cover Plaque Award: The August QST Cover Plaque Award went to Wes Hayward, W7ZOI, and Terry White, K7TAU, for their article "A Spectrum Analyzer for the Radio Amateur." Congratulations Wes and Terry!

* Newest Edition of The FCC Rule Book: The new 11th edition of The FCC Rule Book from ARRL includes everything you need to know about the rules that govern the Amateur Radio Service. This handy tome includes easy-to-read explanations, and it's been updated and reorganized to make it even more user-friendly. The book include all of Part 97 as well as the US Amateur Band Plan, information on repeaters, public service, and interference; technical standards, including RF exposure rules, and much m ore. This latest edition is available in mid-October. Order item 6966. It's just $12. Call toll-free 888-277-5289 or visit ARRLWeb http://www.arrl.org/catalog/.

* Mir packet frequency: MIREX reports the packet system frequency for Mir's PMS system is again 145.985 MHz. Until September 2, the crew had been using 145.940 MHz.

* Michigan club aids bicycle tour: The Big Rapids Area Amateur Radio Club (BRAARC) provided communication during the Michigander Weekender portion of the Detroit Free Press Cross State Mountain Bike Ride in mid-July. More than 1000 cyclists of all ages took part in the weekend event, and some 700 attempted the weeklong tour, the seventh annual. Amateur Radio cyclists contacted the club to help during the weekender, a 44-mile run from Big Rapids to Cadillac and back. Some 20 hams pitched in during the event and helped to handle emergency calls for injuries, spills, exhaustion and heat, as well as more routine traffic.--thanks to William Eckels, W8ZNH/BRAARC

* W0SL to appear in CNN series: Roy Welch, W0SL, of AMSAT fame says he's scheduled to appear in CNN's Cold War series, which starts airing September 27 on the cable grid. There are 24 programs in all. Welch has been told by CNN that his brief shot in the limelight will come during episode 8, "Sputnik," set to air November 15. Welch tells the ARRL's Jennifer Gagne, N1TDY, that his old Sputnik recordings--posted on the AMSAT Web site (http://www.amsat.org) included one from October 1957,

when the first artificial Earth satellite was launched. Its presence prompted a call from CNN asking if they could use the recordings and interview him for the production. "I agreed, and they flew me to Washington where I was interviewed and taped," he said. His "15 minutes of fame" actually lasts less than a minute.

* Zack Lau continues to improve: ARRL Senior Lab Engineer Zack Lau, W1VT, continues to improve following his hospitalization earlier this month. "He is in reasonable spirits, and he even laughed at most of my jokes," ARRL Lab Supervisor Ed Hare, W1RFI, said following a recent visit. Friends and well-wishers can e-mail Zack Lau at w1vt@arrl.org. Cards are welcome to ARRL, 225 Main St, Newington, CT 06111.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide essential news of interest to active amateurs promptly and efficiently, and in advance of publication in our official journal, QST. The ARRL Letter strives to be fast, accurate, concise, and readable.

Material from The ARRL Letter may be reproduced in whole or in part in any form, including photoreproduction and electronic databases. Credit must be given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, ARRL members should visit the League's Members Only Web Site at http://www.arrl.org/members/ and follow the registration instructions. Registration also provides access to The ARRLWeb Extra, a news and feature magazine.

For members and nonmembers alike, The ARRL Letter also is available free of charge from these sources:

* The ARRLWeb page, http://www.arrl.org/arrlletter/. NOTE: The ARRL Letter will be posted each Friday as soon as possible after publication.

* The Netcom listserver operated by volunteers from the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list". (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via the Netcom listserver.)

* The HIRAM BBS: 860-594-0306. The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published Fridays). For example, to request The ARRL Letter file for Friday, September 4, 1998, type "send ltr0904.txt". Then, on a separate line, type "quit". The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

Interesting argument....'don't alert the public to the potential
hazard of antennas because it will make them jumpy about our
antennas'

I sympathize with the underlying protectiveness, but in our
great democracy (well, as close as we get here in the USA),
choices may be made politically, and then accurate information
is required to make reasonable decisions.

It has NOT been settled that our antennas present NO hazard.
If I am wrong, please cite the authoritative literature on it.
The book has not yet been written. Yes, from what we know,
the HF stuff is pretty low hazard, but it is not zero.

Honesty is important. Hiding information is not becoming of
radio amateurs in my opinion.

>
>{{{ IF THE SUBJECT OF COREL SOFTWARE WAS OF NO INTEREST TO YOU, WHY DID
>YOU CLICK ON THE MESSAGE HEADER ��COREL SOFTWARE EXPOSED�� }}}

To see why some moron was posting news articles about Corel Software
to an amateur radio newsgroup.

>We have previously posted similar messages to various newsgroups
>concerning dysfunctional computer hardware and software, whereupon a
>deluge of protests were filed with the administrator of my Internet
>Service Provider, demanding I be removed from said Provider�s system, and
>therefore, from the Internet.
>
>I was accused of ���SPAMMING��� the Newsgroups.

Well this message certainly constitutes spamming according to the
acceptable use policies of many reputable Internet Service Providers.
Hopefully your's has a similar policy and will tell you to take this
sort of crap to alt.flame where it belongs.

> Oh yes, don�t we all love that word {{{ SPAMMING }}}??? It has now
>become fashionable that whenever we disagree with another�s perspective,
>it AUTOMATICALLY becomes ���SPAM���. I refuse to be dragged down to the
>depths of illiteracy for an in-depth discussion of what constitutes {{
>SPAMMING }}.
>
> Very briefly, however, anyone who believes that a message header, which
>accurately describes the content of the actual message, thus represents
>SPAMMING, has lost touch with reality.

You are the one that most likely has lost touch with reality if you
think a posting about Corel Software is on topic for an amateur
radio newsgroup. Usenet spam is the posting of material like
your post to newsgroups completely unrelated to the topic the
newsgroup was formed to discuss.

>This approach is nothing short of
>intellectual fraud, or worse, and represents an agenda far more fiendish
>than spamming.

No worse then your personal vendetta against Corel Software that
you seem to be carrying on in an inappropriate newsgroup.

> There is NOTHING MISLEADING in the message header you just clicked on.
>In case you've already forgot, go back to the main message board and read
>it again.
>
> The content of this message will be confined to my own personal

>
> **** WHY DID YOU CLICK ON THE MESSAGE HEADER TO BRING THIS MESSAGE TO
>YOUR SCREEN if, in fact, the subject of Corel software was OF NO INTEREST
>TO YOU ????? *** The length of this message is brief, same contains no
>viruses, bombs, or ballast material-- nothing illegal whatever.

Already explained above. By the way, your message isn't brief, isn't
on topic, and personally I could care less what your hang up is
about Corel Software. If you think any software is without defects,
then you are extremely naive.

> If the reader disagrees that the product discussed herein is NOT
>dysfunctional, or the topic of defective computer
>software/hardware/gadgets + gizmos is not relevant to the basic theme of
>this newsgroup, then why not try setting aside your dictatorial,
>ill-mannered, MARSHAL JOSEF STALIN MENTALITY and simply skip this message?
>This guarantees YOUR constitutional rights, and MY constitutional rights
>at THE SAME TIME, does it not?

Because its morons like you that turn Usenet and the Internet
into a morass of noise instead of the powerful tool it can be.
Why did *YOU* go out of your way to post a completely irrelevant
article to this newsgroup? Are you such a megalomaniac that
you thought anyone in this newsgroup would care about your
opinion on some other topic?

> If the reader feels posting a message about computer software and
>hardware is not germane to the underlying theme of this newsgroup, please
>consider how anyone could possibly read this message without using
>computer hardware and software products. Since this message relates

>DIRECTLY to the very devices used to access this information, where does
>the objection of ��irrelevant�� material find credibility? Yes, it�s
>irrelevant, only within the framework of the readers personal bias and
>prejudice.

Only within the framework of sane rational people. I have no personal
bias or prejudice towards you (well at least not until you posted this
tripe) or Corel Software. You should seek help if you believe that
your article has anything to do with amateur radio and that
you can justify spamming unrelated newsgroups with complaints
about software unrelated to newsreading simply because they are
both software.

> It is nothing beyond a ���SUBJECTIVE��� issue as for whether this
>posting is irrelevant to this newsgroup. A complainers opinion, or that of

>this style of treatment. They should be the object of consumer boycotts,
>WORLDWIDE!!

Please find a software product that doesn't have deficiencies. It's
a pretty safe bet that the computer software on your computer
has more defects than you can count. Whooppeee. Welcome to
the world of complex software.

>Thank you for taking time to review these comments. Computer users will
>get nothing but more trash from software producers unless we let them
>know we aren't going to accept their trash anymore.

And apparently more trash from you. Hopefully someone can track
down your ISP and have them inform you of their ASP.

>By the way, Southwestern Bell Telephone has a tap on my home telephone,
>so those of you who have started to harass me by phone, blocking caller-ID
>with *67 so I cannot get your number and name---FEAR NOT, SICK PUPPY.
>Southwestern Bell Telephone HAS YOUR NUMBER, whether you use
>caller-ID-blocking or not. If you call here and harass me THREE TIMES,
>Southwestern Bell AUTOMATICALLY sends a report to the United States
>Marshalls Office in St. Louis. They, in turn, forward the info to the
>appropriate local agency, in this case, the Lawrence County Sheriff's
>Office. The latter then takes legal action against the caller. You will
>then have the option to simply plead guilty, pay the fine and have this
>incident as a blemish on your record, or contest the charge, in which case
>you will be forced to make a court appearance, which means I GET TO FIND
>OUT WHO YOU ARE!!!! If you don't like this post, IGNORE IT!

You never end with the threats, eh? As for your threatened legal
action, try it sometime. Lawrence County Sheriff's Office most
likely won't have jurisdiction wherever your call came from. As
a result, their ability to do anything will be extremely limited.
Go find another cause or at least another forum.

> : back", or "Morse code is UNFAIR, I AM DISABLED!" ?

Speaking as a fresh-faced (two day old callsign), though nearly
middle-aged (36) operator, it is true that the Morse code requirement
provided sufficent obsticle to keep me out of the hobby.

It is also true that I waited several years after the 'no code'
technician license became available before I obtained one, so that
(obviously?) wasn't the only thing holding me back.

So now I have a license. Geez, I remember the first day I dropped by
the local HAM's house (on my paper route, I was 13), and he showed me
his shack. I should go find that guy and thank him. (I have no idea
what his callsign is.)

(I think the Tech test (elements 2 and 3a) is too easy to cram for.)

Its also true that so far, my emissions have been limited to 2m and
70cm FM, though the HT I purchased is 6m-ready, I need a "slightly"
better antenna in order to take advantage of it. I've delayed
purchasing a rig that will do SSB or CW until the local Ham fest, in
the beginning of Oct.

Finally, I'm studying (madly) to acquire a tech-plus, then general
class license. I actually think CW is pretty darned cool, and I'm
excited about working DX. This despite other friends (who have been
hams for 5+ years) salivating about being able to work parts of the
spectrum previously available only General class (and higher)
licensees.

Seriously, I now think that CW is cool.

Since I live about 10' below the highest point in my locale, I'm
hoping that it won't take more than about 100' of tower to have all
the fun I can imagine. (The 100' EMS relay towers are across the
street, and my nearest neighbor is 100' away, so nobody will complain. :-)

My $0.02. Maybe the ARRL cares, maybe they don't.

73s,
Jim

Another interesting argument, 'to explain that putting your antenna higher will reduce any potential hazard' is dishonest! Very interesting indeed. I think you over react to my point.

I have certainly done the survey, and according to the results, no problem. That does not end the story though. It IS true that a higher antenna will lower exposure, no matter what your opinion is of a hazard level. That is important to know, some may choose less exposure, even though the FCC apparently believes that more is "safe". Do you honestly believe the FCC has the last word on the actual effects of RF at this time? If you do, well, good for you. I have young children in my house, and while I would not hesitate to take them to visit a hams house where there is some operation going on, IF I can reduce the exposure in my own home or that of my neighbor I will do so. I would rather expose infants to less RF rather than more, and when I can do so, I will pursue that route.

I do not argue that some neighbors might be alarmist, but is that an argument against explaining the truth ... that higher antennas reduce exposure?

I trust that my neighbors will eventually understand and get to the "right" decision, but I know that is not always true. I think the argument about higher antennas is a good one.

when you recieved your license, you agreed to be a amatuer radio operator not a arkansas breed cber, the mod you want is illegal as you should well know. if you respect your privilages, you will not continue this ignorant query. i myself am a ham, yet if i wanted to modify my radio's to receive cell, would i still be a ham? yes, but not one who has the same respect for other peoples privacy. as the ham i am today. the old argument that if i can recieve it it's okay. has never held water. remember, cell comunications are not public domain. these are private frequencies. not public as in a police or other public service area. i hope that i have given you something to think about, if not,i'm sorry that you have been misled. i know it's fun to show off to your friends,but show them what amatuer radio is about. not what a c-ber would do. 73-de-wl7pi

Cross-posted to: rec.radio.amateur.misc,rec.radio.swap

Hey all!

I'm looking for some information on the Yaesu FTH-2070 dual band HT,
specifically if there are any mods out there for it. Are there mods for:

- freq. extensions beyond the 150-174 VHF and 409-450 UHF limits?
- full duplex use?
- increase the number of channels beyond 32?

Also, can it be programmed via the keypad?
Any other information that you might have would be usefull as I'm interested
in getting one for HAM use.

Thanks,

Don VE9XF

Can anyone help me please!!!!!!!!!
I have just purchased the above radio and i need to know how to make it general coverage TX...I also need to know the wiring for the microphone ....the radio is very similiar to the 747 but not quite the same inside...Also if anyone owns one of these radios and has the original manual that they could scan or fax me the operating instructions

Many thanks

Your point is made, evidently mine was not. I'll try again.
I contend that is is dishonest to misinform regulators or the public
concerning hazards that are non-existant by virtue of the fact that
the distances involved are many times that considered by the only
authorities recognized as potentially hazardous. The fact that the
total extent of what is possibly hazardous is not known cannot be a
factor.
Once the distances to antennas concerned
is several times the most minor factor, the risk must be considered to
be
nonexistant. Any other method is paranoia. 90 years of RF experience
cannot tell us the whole the story, just most of it.
If I was concerned for my children's safety from RF biohazard, I'd be

making sure they didn't stand at eye level in front of an operating
microwave
oven, nor go outside into the sun without sunblock or long sleeve
clothing.
Let's leave the ham radio antennas within the perspective which they
truly
belong.

>
>
>
> I have certainly done the survey, and according to the results,

> that a higher antenna will lower exposure, no matter what your
> opinion is of a hazard level.

Sure, the hazard goes from nonexistant to nonexistant minus (whatever
factor exists). NOT good enough reason to sound unwarranted alarms with
neighbors and/or regulators. We might as well place our antennas in the

Clark belt otherwise.

> That is important to know, some
> may choose less exposure, even though the FCC apparently

> believes that more is "safe". Do you honestly believe the

> rather than more, and when I can do so, I will pursue that
> route.

You can take this wherever you want. A few years ago I read of a study that clearly showed, statistically, that children raised on the same side of the
street with AC power lines had a greater incidence of leukemia than those
raised in homes across the street from those power lines. What does it mean? Who knows? Workers spend entire careers in huge power plants and have no ill effects. Is the sky falling???

> I do not argue that some neighbors might be alarmist, but is
> that an argument against explaining the truth ... that higher
> antennas reduce exposure?

If that's how you see the "truth", go ahead and alert all your neighbors. Just
be kind enough to refrain from coming into my neighborhood, please.

> I trust that my neighbors will eventually understand and
> get to the "right" decision, but I know that is not always
> true. I think the argument about higher antennas is a good
> one.

I'd bet on the eventual outcome, if that argument is pursued with neighbors
and community planners. Nothing like a little fear, particularly of something
that you can see and actually do something about, to start the wheels turning. If you don't believe it, well, perhape you haven't read about

extremely restrictive CCR's and zoning ordinances. Lawyers can easily write one sentence CCRs that totally prevent you from any antenna of any
type not preapproved. I've seen one, in particular on the west coast.
It simply said "no additional transmission lines of any type".
That pretty well covers it, doesn't it? Of course
such things might be overturned, if you want to finance the effort.

Greetings Ric
I have had a cordless phone for slightly under 10 years. I do like
them.
My first phone was 48 mhz, single channel, and I could sometimes hear
the neighbours cordless phone.
Next I got a 48 mhz multichannel phone, and didn't hear the neighbours
anymore.
About a year ago, I got a 900 mhz spreadspectrum phone. I like it
very much.
spread spectrum,digital, makes it almost impossible to have your calls
hear by someone else.
The power of 900 mhz is quite small but they advertise almost a mile
range.

Subject: DC Power Plugs
From: w2eny@ibm.net (Robert Langston)
Date: Sat, Apr 11, 1998 14:45 EDT
Message-id: <352fc898.0@news1.ibm.net>

I have found a source for those DC power cord plugs. Very close to
factory, male plastic with 6 metal female (barbed) inserts.

The plug fits most 12VDC HF radios:
Icom 720, 730, 735, 740, 745, 706, 756 ...and alike,
newer Yaesu and Alinco DX70.

Kenwood-TS120, 130, 140, 430, 440, 450, 850..

Kenwood-TS50, 60, 660, 670, 680, 690...and more.

Make your own power cord yourself, YOUR WAY!
Crimp or solder, short or long, heavy gauge wire,
purple with pink polka-dots .... whatever!

Each DC Plug comes complete with 6 crimp/solder inserts
for $4 each, or the deal 3 for $10.

All prices include postage in the US and Canada.

To order, kindly send a check in US funds to:

Robert Langston
286 Hudson Street
Cornwall-on-Hudson, N.Y. 12520

You can also email me for info at: w2eny@ibm.net

It's a great deal if you use one rig at home, in the car or at work
and are stuck re-connecting and dragging the power cord all over....

It sure beats paying $30 for a spare from your dealer.

Have not tried these but this is the only source i know of, good luck, let me
know how it turns out.

Most of the hams I know that have tall towers have been accused of causing interference when the ham in fact wasn't even home. In the public's eye big antenna = interference whether true of not. Can you imagine what might happen if the nightly news broadcast that ham antennas may cause cancer??? It's not what is true that matters but what is perceived to be true. Remember the cell phone fiasco? I think the best policy for most hams is to avoid the subject and hope it will go away. Neighbors can be real nasty if they think you might be hazardous to their health and actually become hazardous to yours....

Gary Coffman wrote in message <
>Remind everyone involved of the inverse square law. Make it clear that

Once you've established that you can reach your dad via simplex, I'd
suggest you still monitor the local repeater. You and your dad can
always QSY to your own simplex freq'y after making contact on the
rptr (that's they way it's *supposed* to be done but few follow that
protocol!). By monitoring the rptr you'll get to know fellow hams in
your area - they'll become a great resource for answers to your ques-
tions.

I am looking to buy a used 10 Meter mobile radio, preferably the HR-2600, President Lincoln, or Ranger 2950. I would also consider buying the Realistic 10 Meter radio of a few years ago. The radio should be in very good to excellent condition. If you have a radio that you are willing to sale, e-mail me and make me an offer. I would also possibly be willing to trade out for a very nice 2-meter HT that I have (the HTX-202).

4814. ic706(noMK) vhf MARS help&#65533;

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-26 00:00:00 UTC
From: xjim@my-dejanews.com
Message-ID: <6uhea4$89u$1@nnrp1.dejanews.com>
Source record: 161174

I have an ic706(noMK), and have done all Mars mods as/artsci - ie R353, Q38, ic32 jumper wire, d59--but am unable to split tx and rx for 2m MARS repeater. Have tried a/b split but the radio seems to think that below 144, 144-148, 148+ are different band segments and wont "crossband" around 144-148, as with Mk2. Is there a hardware fix for this?

No HOA can allow anyone to enter upon the property and destroy what is there, even if it doesn't conform to the terms of the HOA without either a court proceeding to enforce the terms, or a rather long drawn out set of notices to give the violator an opportunity to correct. Please note that usually HOAs provide that the violator is responsible for all legal costs of the HOA if the Association goes to court, and court enforcement of the terms is the usual remedy. If a court orders something removed, then fines and possibly sending out police, deputy sherriffs or designates is the usual practice in most jurisdictions.

I don't think so.....We sure don't need the public being "alerted" that our numerous wires strung from trees, house rooftops, upstairs balconies in apartment buildings etc etc, are in *any* way a hazard to anyones health, including the resident ham. That is a sure route to getting ALL antennas observed with a wary eye, as "dangerous objects", to be avoided, in fact "why do we have to put up with the risk....." you can fill in the blanks. Banishment surely follows, somewhere down the road.

Hams have lived in close proximity to their radiating wires for the entire time

ham radio has been around. The recently initiated "survey" of amateur antenna radiation "hazard" proves our antennas are such a non-hazard as to be almost completely unnecessary. There are rare exceptions-and that is why each ham should do the survey, to fix it in his mind just what parameters would be potentially unsafe
if exceeded. In the case of my station, I'd have to climb the tower and sit near the feedpoint for hours at nearly legal limit power before I'd begin to be in potential jeopardy. And very many broadcast engineers have spent their working lifetime in very close proximity to very strong Rf fields with no ill effects over many years. Same with military personnel.

The RF biohazard survey is here to stay, and at least it can be justified as necessary since there ARE a very few potential RF hazards that hams need to be aware to watch for. But we sure don't need to point to our antennas and tell the world the higher they are, the safer the public is. That is not true, it certainly is not in our best interests, it does nothing to safeguard the public, and would surely come back to haunt us by

scaring officials and members of the public without any reason.

If you knew nothing about the subject of RF hazard and were given that "higher is safer" statement, what would you think?

> radio amateurs in my opinion.

From the tone of your post you must not have not performed the
survey
of your station. I did. The only antenna even remotely anywhere
close to
suggesting a hazard would be the 5/8 wave 2meter groundplane on the
house roof, and at the power level I never exceed, I'd have to sit
at
rooftop, within a couple of feet of it before any question is
raised.

If you feel that it is "dishonest" that I think it alarmist to scare
the public and officialdom just for the purpose of obtaining
sanction to hoist your
tower/antenna to heights not otherwise permitted, and no real basis
for this
"scare" actually exists, you must surely have a curious dictionary
to which you refer. THAT act is in itself dishonest, and the fallout
potentially much more far reaching than any simple zoning matter
could ever stretch.

I am studying to take my test within the next couple of weeks, but had a quick question.

I have read that it is best not to use repeaters if you don't need to. Well, my Dad lives about 5 miles from me and I was thinking of buying a 2m/440 H-T. What is the approximate range of a 5 watt H-T? Would this have enough power to transmit that far without using a repeater? Assume that my Dad would be using a similar type of radio.

Thank you for your help,
robert

September 25, 1998
Target: send!w8mmq-listserv

Welcome to The RSCM Wire, for Friday, September 25! Please note: unless you are a member of the Radio Society of Central Michigan, this will be your last copy of this newsletter via email. We no longer have the resources to distribute to everyone on the list.

Membership in the Society is completely free! There are no charges, dues or fees required to become a member. Just reply to this email message to learn more. You will be sent extensive information on how you may join, and receive such services as our newsletter, special bulletins we issue from time to time, and much more.

You do not need to be a resident of Central Michigan to join, and you do not even need to be a licensed amateur radio operator. Again, membership is easy, and it is free! Reply to this email to learn more.

We encourage the free redistribution of this newsletter, so long as credit is given in some way to W8MMQ or the Radio Society of Central Michigan. Thanks!

In this issue: the FCC adopts the ULS; hams react quickly to the latest hurricane threat; lower vanity fee results in increased apps; and much more!

THE FCC ADOPTS THE ULS
The Federal Communications Commission has adopted its proposed Universal Licensing System (ULS), which will replace amateur Form 610 with electronic Form 605.

The new Universal Licensing System is used in the authorization of applications in the aircraft, amateur, commercial, maritime, and general mobile radio services.

The Commission says that the changes will not take place immediately, and applicants may continue to use the Form 610 for up to six months after the new changes go into effect.

Of concern to many amateurs is the new requirement that all applicants must submit a tax identification number (TIN), commonly the Social Security Number. The Commission has assured those concerned that this information will be kept completely confidential.

Personally, I feel that this is outrageous. There is no need to collect applicants' Social Security Numbers. Why would the Commission request an identification number that is supposedly used only for tax purposes?

Among other concerns, the Commission says that all forms must be submitted electronically, effective July 1, 1999, or six months after the ULS has been used in a particular radio service. Anyone in the computer industry knows that even the most secure internet systems can be breached, and the implementation of mandatory electronic filing certainly is an issue to be concerned with.

Complete information on the ULS can be obtained at www.fcc.gov/wtb/uls. At the time of this writing, a specific date had not been set for the implementation of the ULS, but it is expected within the next few months.

HAMS REACT TO GEORGES
Amateur radio operators across southern Florida quickly reacted Friday as Hurricane Georges approached, and then hit, Key West, causing extensive damages, and knocking out power to hundreds of thousands of people across the state.

Georges maintained winds in excess of 105 miles per hour Friday, as it tore through the Florida Keys.

The Hurricane Watch Net, on 14.325-MHz, has been continually active since Georges entered the Caribbean about a week ago. Operators of the Watch Net gathered reports from amateurs in and around the path of the storm, then relayed those reports to W4EHW, at the National Hurricane Center.

So far, nearly 300 people throughout the Caribbean have lost their lives as a result of the storm, however no deaths or injuries have been reported from the Florida Keys, as of this writing. Also, as a result of the storm, late Friday strong to severe thunderstorms were scattered across Florida, as far north as Tampa.

LOWER VANITY FEE DRAWS MORE APPLICANTS
On September 14, the vanity callsign fee dropped to $13.00, from $50.00. This drop has resulted in increased applications being sent to the Federal Communications Commission.

The Commission is reporting that on September 14, 281 applications were received. There were 78 received the following day.

The new vanity fee had been announced several months ago, and many amateurs decided to wait and take advantage of the lower fee. The Radio Society of Southern Rhode Island, a direct affiliate of the Radio Society of Central Michigan, has taken advantage of the new fee as well, and has applied for a new callsign.

PIRATE RADIO BROADCASTER WINS BATTLE
The Associated Press is reporting that a Hartford, Connecticut pirate radio broadcaster has won a battle with the Federal Communications Commission, at least for now.

A federal judge, U.S. Magistrate Thomas Smith, has ruled that Prayze FM, a gospel radio station, can remain on the air without a license for the time being. However, it was not made clear how long they may remain on the air without proper licensing.

On September 11, U.S. District Senior Judge Warren Eginton had ordered the station off the air, until it received proper licensing from the Commission.

Mark Blake, who owns Prayze FM, has said that he will attempt to obtain a temporary license for the station.

The station, operating on 105.3 FM, broadcasts religious and gospel music and programming throughout the Hartford area.

UPCOMING CONTESTS
For complete contest information, visit the ARRL Contest Calendar. This site contains extensive information on the contests, including contact persons.

California QSO Party
The California QSO Party will be held from 1600-Z October 3 through 2200-Z on October 4. Work stations once per band, and mode.

Visit www.cqp.com for complete information on the contest, or contact cqp@contesting.com.

RSGB 21/28 MHz Contest (Phone)
The Radio Society of Great Britain's 21/28-MHz Contest will run from 0700-Z until 1900-Z on October 4. Exchange RST and serial number.

For more information, visit www.rsgb.org.uk.

AND IN CLOSING
Thank you for reading this issue of The RSCM Wire! We hope that you have enjoyed it, and please, feel free to pass it along to others. We also encourage the use of our material in your own club literature. All we ask is that you give credit in some way to W8MMQ or the Radio Society of Central Michigan.

If you have any information to contribute to this newsletter, you may email Dan/W8MMQ. We will review all information submitted to us, and consider it for use in the newsletter.

73 de,
Dan/W8MMQ

5 watts is more than adequate for such a distance. And it may be possible
to do so with basic "rubber duck" antenna's. However, reliability is
another matter. If you hang up a simple basic outside antenna at both
locations you will have 100% commo any time you desire. A j-pole made from
TV Twinlead would work and/or a ground plane.

>understand that higher antennas mean less risk to themselves and their
>electronic equipment........

Gary you may be an electronic whiz but your knowledge of people being reasonable is wishful thinking. Even using the word "risk" is dangerous. Why would anyone approve a *low risk* antenna when no antenna would be *no risk*.

If you next door neighbor was trying to get a zoning permit to keep a beehive and your approval was required, would you be more inclined to say OK if the hive was kept on the far side of his yard away from yours, because the risk is of being stung is lower? (But of course no hive is no risk.) Be honest. I'd say that's a no brainer.

So if I say to my neighbors (the committee) let me put my antenna up high so there will be less risk, their answer will be a no brainer also. In politics facts are secondary and emotion (read fear, real or perceived) will rule......

Source record: 161044

Simple, but why??? Radio Shack has "real" CBs for the price you are going to pay for a crystal, not to mention the wear and tear of a fine ZD rig.

Just buy a crystal 1 Mhz lower than the crystal freq of the 10A position. Shift all of the other 10 meters crystals up one position (10B will now be your 28.0-28.5...etc). Keep the 10D crystal in a safe place. You may find an unused crystal socket to keep it inside the rig.

Load/tune the rig on 27 MHz as usual. NO MORE THAN 20 WATTS OF AM CARRIER !!!!! 20 watts of AM carrier with modulation = 80 watts of RF envelope. After tuneup, increase the LOAD control 1 full "tick" clockwise, your PO will be reduced a little, but this is OK. Adjust the mic control so that the PO meter position shows deflection (more power) as you speak. Also check that your BIAS is set just below 60ma (maybe 40ma) if you are going to keep it on CB, else keep it at 60ma at all times. Don't ask why.

You will now sound like a CB'er. ... with a $425 radio.

For shame... for shame... I know... it is for receiving only... :-)

73,

Al

SB DX @ WW $OPDX.376
Ohio/Penn DX Bulletin No. 376

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 376
BID: $OPDX.376
September 28, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K1XN & GOLIST, K2KQ, KF2TI, N2TK, WB2RAJ/WB2YQH & The 59(9) DXReport, W3KT, W4WSZ, WD4NGB, N6RT, W8VI, W9NY, BA4TB, DL9RCF, F6AJA & LNDX, G4BUE & DX News Sheet, HB9CYN, HS1NIV, LZ2CJ, OZ8RO, PS7AB, YC8VIP, 4L5O and 5N0/OK1AUT for the following DX information.

3V8, TUNISIA. The "LNDX" reports that Albert, F2KN, will again be in Tunisia from October 1-15th. He hopes to be active from 3V8BB during his free times. QSL via F2KN.

3W, VIETNAM. The "DX News Sheet" reports that special event station XV300S will be active until December 31st to commemorate the 300th anniversary of Saigon city. QSL via K2WE.

5N, NIGERIA. David, OK1AUT, reported to OPDX that he is currently in Lagos and is active as 5N0/OK1AUT. His length of stay was not mentioned. He stated that he will be active on 80-10 meters CW/SSB. He was spotted this week on 21295 kHz between 2130 amd 2330z. He has also been reported on or around 3505 kHz between 0130 and 0430z. QSL direct to OK1AUT: David Klimosz, P.O.Box 53, 16201 Praha 6, Czech Republic.

BI5, XIAOYANGSHAN ISLAND (PRC). Deal, BA4TB, reports that the ShangHai DX Club and JiangSu DX Club will be active again from this Zhoushan archipelago (IOTA AS-137) as BI5X. The BI5X operation plans to be active on 80-6 meters (WARC bands included) on CW and SSB. Activity will be October 1-3rd. They will have 2 or 3 stations on 24 hours a day. QSL BI5X via BY4BHP: P.O.Box 085-299, Shanghai 200085, China.

BV9, PRATAS ISLAND. Gary, W8VI, talked with Taya, BV5BG, September 23rd, and Taya seemed very optimistic about a Pratas operation that will take place in October. Taya said on the air that "In October, BV9 will be active !". KYFC!!!

CHANGES IN UPCOMING DXPEDITIONS.......
Reports indicate that due to the ZL9 and PY0 (although this has been changed, read below) DXpeditions in January, 1999, Frank, AH0W, may postpone the Midway-Kure DX Foundation's (MKDXF) DXpedition until the end of January, 1999.

The NATAL DX GROUP announces that as a result of a recent meeting, the January, 1999, DXpedition to the St. Peter & St. Paul Rocks (PY0) has been postponed to the first week of March, 1999. This is due to the two DXpeditions to ZL9 and 3B9, as well as the convenience of the operators.

The Midway Island "K4M" operation by the MKDXF which was to take place September 20-25th was postponed.

Bill, W4WX, reports that W4WX/KH8 was not heard during last weekend's RTTY contest because he could not get a flight out of Travis to go to Pago Pago or Hicham.

CN, MOROCCO. "The 59(9) DXReport" states that Gerald, OE8GNK, will be active October 9-30th. His callsign is to be issued upon arrival. QSL via homecall.

CN, MOROCCO (Update). In last week's bulletin (refer OPDX.375) Ben, DL6FBL, stated he would be active during both CQWW Contest (CW/SSB) and was not sure what his callsign would be. Well, Ben has informed OPDX that he will use the callsign CN8WW.

E3, ERITREA. After several years of silence Eritrea was finally heard on the air thanks to Jacky, F2CW, who was in Asmara for the past few weeks. Jacky received a letter from the Ministry of Transport and Communications stating that Amateur Radio is officially open in Eritrea as of September 21st, 1998. The only "bad" news is that the license fee has currently been set at $500 USD! Jacky was only able to be active for a little while during September 22-23rd, as E31AA because he had to leave for Djibouti Wednesday morning for business for one week. The good news is that Jacky will be back in Eritrea in a week and will then operate some more with a Kenwood TS-50, which is currently being shipped to him. QSL via ZL3CW/F2CW: Jacques Calvo, POB 593, Pukekohe Auckland 1800, New Zealand.

E3, ERITREA. Bruce, WD4NGB, reports that things are moving along on the "Space A DX Group's" trip to Eritrea. He mentions that it takes time to plan a trip for 20 operators from 10 different countries. The operation by Jacky as E31AA is a plus for their plans. Jacky has also helped them to do some of the detail work before the group gets there. Bruce has asked Jacky to join them when they go to Eritrea. A few details and questions still have to be worked out. Once this happens, an official announcement with dates, frequencies, etc.... will take place. Currently, they have 4 WEB pages up and running and a 5th is under construction to speed up access. They tried to get one in Japan with no luck. These pages are:
http://qsl.ner/eritrea
http://members.xoom.com/eritrea_
http://members.xoom.com/space_a (This is the full Space A

DX Group page and E3)
http://pagus.it/E31DX (In Italy)
One in Spain is under construction.......

FO, FRENCH POLYNESIA AND AUSTRAL ISLAND. It has been reported that two French operators will be activating several islands in the French Polynesian group. Look for Christian, F6IFC, to be active as FO0RIC from Moorea Island (IOTA OC-046 and FO-010) September 29th through October 7th, Bora Bora Island (IOTA OC-067 and FO-003) October 7-12th and Huahine Island (FO-067, IOTA not mentioned) October 12-15th. Look for Joel, F5JJW, to be active as F0OSUC from Tubuai Island (part of Austral Island, IOTA OC-152 and FO-126) October 7-17th and Tahaa Island (IOTA OC-067 and FO-013) October 19-22nd.

FR/G, GLORIOSO ISLAND. A report in the "Megahertz Magazine" (a French amateur radio magazine) states that Jacques, FR5ZU, will be active again from October 7-30th, as FR5ZU/G. Planned activity includes SSB and RTTY on all bands. Look for him during the following times: 0230-0430z, 0830-0900z, 1430-1600z and 1700-1800z. QSL via JA8FCG.

GM, SANDA ISLAND (SCOTLAND). Ian, GM3UTQ, will activate this Scottish Island from now until October 3rd. The island is just south of the Mull of Kintyre. His visit is mainly for the "Islands of Scotland Award". Its reference numbers are CL-08, EU-123 (IOTA) and NR-73 (WAB square). Look for GM3UTQ/P on SSB 80-10 meters.

HK, COLOMBIA. By the time you read this, Gerard, F2JD, may be active from here. Activity is to start during the end of September and last for one year, probably two. He hopes to renew his previous licence as HK/G0SHN. QSL via F6AJA.

HP, PANAMA. In October, Roger/DL5RBW, Rainer/DL1RBR and Markus/DL9RCF, will be visiting Guenter/HP1XVH on Contadora Island (IOTA NA-072). Activity is planned during the CQWW SSB Contest using the callsign 3E1DX. QSLs for 3E1DX go via N0JT. Before and after the contest, QSLs go via homecalls.

HS, THAILAND. Nida, HS1NIV, states that the Chiangmai HF Clubstation (HS5AC) or the official Chiangmai "Ham" Association will be active in the November CQWW CW Contest as a Multi-Single entry. He is currently looking for more operators. The station consists of: TS850S, TS450S, A4S w/t 40m, R7, FL2100 1K Linear, a desktop computer running CT, etc. Chiangmai is located in the north region, 800 Kms north of Bangkok and it will be winter during this time (10-18c, sunny). If interested, contact HS1NIV, not the manager, via E-mail: aixxo004@cmu.chiangmai.ac.th

J3, GRENADA. A group organized by YCCC will once again activate a 6-band Multi/Multi station during the CQWW CW Contest in November. Don, K2KQ, is leading the group this year. The group will use the callsign J3A and QSLs will be handled by WA8LOW.

J68, ST.LUCIA. Fabrizio, IN3ZNR, will be active from here October 3-10th. He did not mention his callsign, but his activity will be on SSB all bands

with emphasis on the lower band. He will also be on the WARC bands, if hardware becomes available. QSL via home call IN3ZNR either direct (callbook address) or bureau. If interested in sked or want additional information, please get in touch with him at: in3znr+AEA-qsl.net

LZ, BULGARIA (160m activity planned). Wally, LZ2CJ, reports that he will be active in the upcoming CQWW DX SSB as a Single Op/Single Band entry on 160 meters. His QTH is at 1330m ASL, and his antennas will be: phased Inverted Vees to USA, 200m Long wires to Asia, Pacific and Africa.
If interested for skeds, send E-mail to: lz2cj@qsl.net

PALESTINIAN STATEHOOD. An AP report from Jerusalem states that in a upcoming speech to the U.N. General Assembly, Yasser Arafat will call for a declaration of Palestinian statehood regardless of whether there is progress in talks with Israel on a West Bank troop withdrawal by then.....

PIRATED PREFIX "1V6". Omari, 4L5O, wants to inform all radio amateurs in the world that "1V6" is a "PIRATED PREFIX". He mentions that some operators from the Rep. of Georgia do not like the 4L1 prefix but choose to use the 1V6 prefix. These are not a valid allocated callsigns.

QSL INFO AND NEWS.......
CORRECTION. Last week under "V2, ANTIGUA" we had the following listed as "Tom/N2TK V26AK QSL WT3Q" it should have read the following: Tony/N2TK V26AK QSL home call.

CORRECTION. Ovy, YC8VIP, from Ambon Island (OC-070), informs OPDX that VK4FW is NOT his QSL Manager. Only Steve, W6MD, is his QSL Manager. QSL only to Steve Busono, 1700E, 13th No. 14 OE, Cleveland, OH 44114 - USA.

George, W1ZT, has agreed to assume the QSL Manager job for Desmond Peters, ZD7DP, on St. Helena Island. He states that he has logs for all QSOs, so he will accept QSL requests for all contacts including those prior to this date. This should help speed the QSL process as the mail service to St Helena is by mail ship only. George's address is: George Johnson W1ZT, 30 Washington St., Beverly, MA 01915, USA

S9, SAO TOME & PRINCIPE. Chris/HB9CYV and Martin/HB9CYN will be active here October 26th through November 7th, as S92YV and S92YN, respectively. Activity will be on CW/SSB, all bands 80-10 meters and on the usual DX windows. QSL S92YV via HB9CYV (bureau or direct to new address: Chris Zeller, Jaegerstr.19, CH-8200 Schaffhausen, Switzerland). QSL S92YN via HB9CYN (bureau or direct to CBA). QSLs via bureau are preferred. If QSLs are sent directly to the home call addresses, please consider the postage cost in Switzerland. They are one of the most expensive in the world (2 USDs or 2 IRCs are needed for Air Mail to oversea countries (outside Europe!). Information about the Dxpedition will be available soon at the WEB page: http://ab5eh-lin.tamucc.edu/~hb9cyn
Also, the logs will be available on the same WEB page mentioned above just after the DXpediton.

V4, NEVIS ISLAND. "DOC" Michael Treister, M.D., W9NY, reports to OPDX that he will again be active as V47NS October 22-27th. His CQWW SSB Contest operation will probably be monoband 10 or 15 meters but will work 20 meters outside of the contest. He states, "This assumes that there is electricity on the island following the hurricane)". QSL via W9NY (older callbooks, W9NSZ is OK).

VP5, TURKS & CAICOS. Members of the North Florida DX Association (NFDXA) will again activate VP5 during the CQ WW DX SSB Contest. This will also be a Multi-Single entry using the callsign VP5DX. Operators will be Ron/N4KE, Jim/NU4Y, Jim/KC4FWS, Steve/AB4UF, Larry/W1LR, Al/WA4DRU, Frank/W3KT, Robert/W4WSZ and Gene /AA4US. QSL VP5DX via K4UTE. QSL other members' callsigns via their home calls. The operaton will take place from the Cottage of N4KE on Middle Caicos (IOTA NA-02).

Well,
sounds like you've eliminated your end of the problem. As good neighbor
policy
indicates, it might not be a bad idea to get some audio passband filters
for his system
(they are cheap at rad shack). Btwenn this, grounding the chassis and a few
other
things, you might be able to minimize the problem (it may not be possible
to
eliminate it comepletely) I used to have the same problem with my stereo
equipment
here and the CB radio I was using at the time (soem rad shack audio
isolation transformers
did the trick nicely, and they caost about $12.00 a piece).

Good luck,

Hawke

Sam,
you are not the only one interested. I am a unix user here,
and am wondering if its possible to get that working under this
environment (it would be nice). If the source code is available,
I might be able to have the program compiled for use under
Xwindows (unix's counterpart to winblows).

4839. Help Please! Noise problem with attic dipole

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-27 00:00:00 UTC
From: Bob Sikes <rwsikes@mediaone.net>
Message-ID: <360ED539.BFAC5124@mediaone.net>
Source record: 161049

I set up a 1/2 wave 20 meter dipole antenna in the attic a couple of weeks ago, running along the main beam and about 35 feet above the ground. Good news is that the antenna is very sensitive compared to another antenna that runs outside, but only about 15 feet up. The bad news is that at times (e.g. tonight), I get about 5 db of static noise. I'm getting it at 10, 20, 40, 80 and 160 meters with virtually no noise at 15 and 17 meters which makes me think that it has something to do with the antenna instead of the AC lines. I've tried turning off all powered appliances to no avail. I've worked on making sure I have a good ground. I'm at a loss.

At times the noise is very low, but not tonight. I can pick off really loud stations, but all the faint stations fall into the noise.

The tranceiver is an ICOM 740.

Bob Sikes

Message-ID: <360EE19E.28E7B896@ix.netcom.com>
Source record: 161050

I have had an amateur radio license for about 5 years now and I have yet

to make my first QSO (radio contact) Anyways, I'm
searching for information about a functional radio with a morse code key

that I could make use of that language (morse code) that I learned and
still
know. Does anyone have info on where or who
I could see or talk to to get a hold of a workable 'radio station.'
BTW, my call sign is KB1ARY I have a programmable scanner

that was given to me, but it doesn't transmit.

Also, does any of the readers of this ng have the list of words that
they use for letters over the radio? ie.. Alpha, Bravo, Charlie,

....

Thanks a lot,

Peter Sargent

4841. Kenwood TS-940 Problem

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-27 00:00:00 UTC
From: "John J. Burke" <w7bo@qsl.net>
Message-ID: <360ee6f0.0@news.worldaccessnet.com>
Source record: 161051

I have a Kenwood TS-940SAT here that quit working so so and hope that someone will give me a idea where to look to fix this problem

My Kenwood has a problem when I turn it on it works perfect. All functions as far as I can tell are super and I can call and talk to all. But after a minute, the display goes to all DOTS on bottom with NO NUMBers the Transmit/Revc dies to nothing. I can not talk nor recievce.
If I try to put a freq in the display it goes then disappears. If I unplug radio for minute and I get all back for about a minute.

Help and where should I suppect anything??

Will the SM 220 Scope work with the 850?? If so, how do we hook it up.
It has the pan adapter 8.83 in it

2 things come to mind. Either your backup battery has finally died or is
in the process of dying or you PLL circuit is going. A similar problem
was seen with the TS440S.

Unfortunately, reminding people of the inverse square law really doesn'tmake
for a Covenant. While it would be nice to have a antenna at 75 feet,
the city ordinance restricts it to 65 feet.

But the object is to put in place a set of covenants that give Hams at least
a fighting chance to use their licenses.

The main thing that I'm fighting is the paranoia of the the Association from
interference. That one can only be fought with education, and perhaps
a covenant, that assures the membership that help is available to track
down and help resolve the interference issues.

To a lesser degree that the Association doesn't want to have antennas
because they consider them "eyesores". However, they don't really get a
choice in this because Federal law now allows Satellite and Television
Antennas.

I too have seen the "Antenna = Interferance" symptom show up. I make ita
policy when I set up antennas at a new site to have the cables terminate in
a plastic bucket sitting on the ground for a few weeks.

You'd be surprised how many complaints I've received about the interference
caused by the plastic bucket 8-)

But when I point this out to the complainer, and that I am still willing to
help
them out with the problem, I find the PR that is a result is most positive.

Pure BALONEY!

The infraction comes when you transmit with that radio...not when you
take possession of it. MARS and CAP operators all over this country
would be in deep kimshee (sp?) if what you say is true..fortunately
for us..it is not.

>You may be correct, Barry (or not :-) but your post would have ever so

This topic has been brought up many times in my area, and while I have no legal basis for this, here is my opinion. If you used a radio for a LIFE OR DEATH emergency to contact police, I doubt if it went to court you would loose your case. However, it damn well better be a LIFE OR DEATH situation. You could very easily end up loosing your radio, and/or lots of money (fines). Just think about all the strange verdicts courts come up with these days, and it is really hard to try to figure out how they will side.

No, No, No, and again, no.

There is no rule within the FCC, that prohibits someone from
owning a transmitter that they are not licensed for. None.

If you must persist in handing out obvious misinformation, please
include the quote from the FCC, citing rule number, that you are
obviously mis-interpetating.

You have 4 bands for 10 meters. Look at the first 10 meter xtal and subtract 1 mhz from it. No other adjustments internally need made. You will need to get crystals you can solder or use wire from a resister, capacitor, etc. to attach to the xtal before putting on circuit board.

Hope this helps,
Mark

>Banishment surely follows, somewhere down the road.

We already have that situation. Because the public is generally ignorant
about radiation, the inverse square law, etc, they are already fearful of
antennas. The three major reasons the public gives for opposing antenna
structures are fear of radiation, fear of RFI, and the eyesore argument.

The public is generally confused about radiation. Most think of radiation
in terms of atom bombs. Thus they are already terrified of it. It is to our
advantage to educate them about the difference between ionizing and
non-ionizing radiation, and the true risks of each (as best as those risks
are known). We need to make them aware of the protection offered by
the inverse square law. Covenants which restrict antenna height
increase radiation exposure risks. They do not reduce them as the
public seems to think. We need to ensure that the HOA understands
this.

The public also associates visible antennas with RFI. We need to educate
them about the inverse square law, and the benefit of getting the antenna

higher with respect to RFI to their equipment. Covenants which restrict antenna height increase the potential for RFI. We need to make sure that the HOA knows this too.

Trying to keep the public ignorant of these realities will only let their worst fears go unanswered. It is far better to be as up front and truthful with them as possible. There's bound to be someone at the HOA meeting with a Xerox of one of the scare pamphlets proclaiming the perils of radiation in a false and unrealistic fashion. We'll be asked about that, and it is far better if we have already been up front about it, and explained how we're required to know about this hazard and how to deal with it as part of our licensing requirement.

Finally there is the eyesore argument. There isn't a lot we can do about this except be willing to work with the archetectural committee to come up with something acceptable in their sight, but if we make the HOA understands that higher antennas mean less risk to themselves and their electronic equipment, we may have a chance of making these tall structures more attractive in their eyes, or at least become the lesser of two evils.

As far as the risk of banishment goes, we reduce the risk that the HOA will simply ban transmitting equipment altogether by being up front and honest with them rather than letting them believe the scare pamphlets. Establishing credibility is critical, and you don't do that by trying to conceal things.

4864. TVI HELP!

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-27 00:00:00 UTC
From: MPD910@hotmail.com
Message-ID: <360E670B.212B2EBF@hotmail.com>
Source record: 161134

HELP!

I have a TVI problem with my next door neighbor, I'm going through his telephone and television. He's using a surround sound stereo system with an amplifier. On 20 meters my antenna is about 12 feet from his house 15 feet off the ground. I can't raise up any more and this is the only place for it. All my equipment is grounded.

Will a lowpass filter work? I using 100 watts into a dipole. I have no problems in my own house at all.

Thanks in advance for any help.

>:transmitters capable of transmitting of outside ham bands. If you see
>:any such prohibitions, please cite them. You are claiming that part 97
>:forbids hams to possess equipment that can transmit outside of ham
>:bands. Would you contend that a ham can't own a CB radio, a family
>:service radio, licensed radios for other services, etc.?

This discussion centers on whether Part 97 protects a ham if he
intentionally *transmits* out-of-band; no one has ever said that
ownership of such equipment is illegal. (My contention has been
when an amateur transmitter is set on a freq'y outside a ham band,
it is no longer part of one's "amateur station"; we'll see if my
opinion is correct once the FCC answers the email I sent them.)

>In the USA it is an offence to be in posession of a transmitter for
>which you don't hold a current licence. Don't believe me? Check with
>the FCC. There may be some exemptions for hams.

Now Barry, don't confuse your nutty Australian/UK regulations with
our US regs. (How was your winter?)

yes, in a true life or death situation, any reprocussions later really wouldn't matter, however, there are a lot of people that have kinda funny definitions of Life or Death, and you can pretty well bet, that it better be a TRUE L or D situtaion.

>>>jeffreyh@Hawaii.Edu (Jeffrey Herman) wrote:

>>> I find it a shame that amateurs never implemented the idea of a calling
>>> frequency on each band which everyone would monitor...

Obviously, you don't listen to the current calling frequencies. But I
guess you probably still only have a 20 meter dipole pointed S.W., eh?

>>Several UHF/VHF bands have such frequencies, especially in the "weak signal"
>>portions of the bands, such as at 50.125, 144.200, 222.100, 432.100, 902.100,
>>903.100, Also in the "FM" portions of 2M we have 146.52, etc., which are
>>designated calling and listening frequencies. The "LiTZ" and "Wilderness
>>Protocol" distress calling arrangements are both associated with the 146.52
>>national calling frequency.

No, no, no! 146.52 is the 'National Simplex channel' as designated in the
ARRL repeater guide. It is NOT a calling frequency similar to the
144.200 Mhz designation. There is a difference.

>>>Maybe it's not fair to compare the two services, though, for the maritime

You got paid to sit and monitor the distress channel. Almost
nobody will do that for free. If, for example, I need help on the highway
I will call on channel 17 instead of channel 9 because that's where the
truckers are. Who is listening on 9? Same for ham radio except much
less involvement. I almost always listen on 146.52 when driving but
rarely hear anyone. The few QSO's I have there are very enjoyable, however.

Years ago the local PDX club decided that 146.94 would be a 'calling'
repeater. They put a 30 second timer on it and actively chased off
ragchewers. Almost nobody used that repeater as a result. Its still
a very active repeater channel most everyplace else.

Jim

Jeffrey Herman <jeffreyh@hawaii.edu> writes:

>"...but seldom observed" sums it up quite well, Hans. The entire
>world-wide maritime community without exception observed the calling
>frequency concept for the 65+ years of its existence; no such
>world-wide discipline would ever exist on the ham bands.

I spent 21 years at sea, and the red arcs on the clock at 15-18/45-48
are still emblazoned on my retinae, but I ain't at sea any more,
and as a ham it ain't my job to "pray for those in peril on the sea".

My participation in amateur radio is for experimentation and
relaxation, not regimented monitoring of "calling frequencies".
I'll damn sure respond to a call for help if I hear one (and I have),
but that isn't why I'm in the shack.

This is a classic known pronblem with the 940, the PLL is unlocking, there are several chips on the PLL board, one of them is probably losing it's 5volts, very common, some people take the chips out of the sockets and reseat them or solder them in directly or you can ship it to a kenwood authorized sevice center and they will be very familiar with the problem

Been there - doesn't even have to be a big tower. I had a little
Diamond X-50 on a short mast bolted to the blacony behind my old condo.
A neighbor started having probems with her garage door opener and called
an "engineer" friend of her's to help find out why it opened by itself.

The "engineer" said it might be interference from a CBer or a ham radio
operator in the neghborhood. After hearing what my antenna was for she
called me - of course it took several days for me to return her call
since I was out of the country that month.

I suggested that she change the batteries in her remote and invited her
to call me back if she needed more help. Never heard another word about
it.

Which Mobile Radio is the better of the two?

Yaesu FT-8500 or the Icom-207H?

I think they're both around the same price last time I checked
(~$300). Any advice would be appreciated.

They're very different radios.

The FT-8500 is a former top-of-the-line radio that has recently been dropped in price by a couple hundred dollars. It will do just about anything. It has two complete receivers, so it will receive one VHF and one UHF station simultaneously (or two VHF, or two UHF, with some loss of sensitivity on the "wrong" side). It will do cross-band repeat. It has simultaneous frequency and alpanumeric display of memory channels. It can do DTMF paging and CTCSS encode/decode, though it needs (expensive) add-on circuit boards for some of these functions. It has a "spectrum analyzer" display mode. The faceplate can be removed and mounted remotely using an (expensive) accessory cable. It has almost no controls on the front panel - essentially everything is controlled from the mic. Some people love this, some hate it. There are two different designs of mic. One has a dozen different controls arrayed over its surface; the other looks much like a conventional DTMF mic.

In comparison, the IC-207H is a much simpler radio. It has only one full receiver, so it can receive or transmit on only one frequency at a time - but it has two VCOs and two power amplifiers, so it can do this in either band. No crossband repeat. No alphanumeric display. It has CTCSS encode/decode built in; no DTMF paging is possible. It also has a removable faceplate, which is smaller than the 8500's or just about any other mobile rig - this may make it easier to mount in small cars. The faceplate separation cable is cheaper than Yaesu's too. The 207's mic *can* control almost all of the transceiver functions if you want, so you don't need to be able to reach the faceplate - just like the 8500. But there are *also* controls on the faceplate - so you can use it like a conventional radio if that's what you prefer - unlike the 8500.

Basically, the 207H is designed as a simple mobile that has pretty much everything you need to talk and listen already built in, for a relatively low price because of the single-receiver design. The FT-8500 is a full-blown dual-band radio containing two complete

transceivers in a single box, and lots of bells and whistles. It will do more, but it will take you longer to learn.

You might want to take a look at the IC-2710. It is Icom's dual-receiver equivalent to the FT-8500, more or less. Not that you'd want to spend the extra money for the 2710, but the differences between the 207 and 2710 are the differences between single-receiver and dual-receiver design philosophy.

I can't tell you about relative performace - I don't own either. But I've been looking at both - these are my top two candidates for a radio for use in my car.

The problem with the TV and the phone two entirely different matters.
1. Telephone
a. This is a device NOT INTENDED to receive RF signals. A filter
can be applied to the phone. No filter on the TX will effect
it at all. I use filters designed and built by WB2OTK for my
phone and computer. Works completely.

2. Sterer.
a. Very likely the problem is his long speaker lines picking up your
signal. Also the power lines could do so. Brute force filters
installed on his system may help.

In both cased a LowPass filter will not help one little bit, installed at
your tx. However it wouldn't hurt a bit just to do everything you could.

Moving your TX antenna would help.

Good Luck, and try the new ARRL RFI handbook for 20 bux.

It basically sounds like you are putting too much signal into your neighbor's equipment. A low pass filter is not going to solve the problem for you, it's not harmonic energy overloading his equipment but rather your signal getting where it should not be. There are filters for phone lines which sometimes work, especially if only one of several phones is affected. Basically what you want to do is limit the response of his telephones to your rf.

The stereo may or may not be difficult to solve. I also note that when I used one of the calculating programs for rf safety, it sounds as though your present setup is barely within compliance with the new rf safety rules if you aren't running a high gain antenna. If you are running a yagi with a lot of forward gain, your setup may not comply with the new rules.

Basically there are several ways that the stereo may be picking up your signal. The RF may be getting into the speaker leads, the power cord, or some combination of the two. Since you don't mention FM alone being affected, I assume that the same problem exists whether the neighbor is using a CD player or whatever other equipment the neighbor has connected. A purchase of the FCC booklet on TVI might be a good idea for you, and giving it to your neighbor. Your neighbor though is not going to be pleased unless you stay off the air even if the real cause is the neighbor's poorly designed equipment. I would suggest that you not perform any alterations to the neighbor's equipment either to install filters on the power line or the speaker leads, since anything which goes wrong afterwards will be perceived as your fault.

Also please note that if you use the same antenna on 10 meters, your rf output is too high to be safe that close to your neighbor if your antenna has 3 db gain over a dipole. If you are using a dipole or vertical it barely complies on 20 meters and doesn't on 10 meters apparently at the distance from your neighbor. Your safest alternative may be to reduce power to

50 watts to operate legally on 10 meters or so.

Unfortunately, that pre-emption doesn't apply to amateur radio antennas.
The ARRL asked the FCC to extend the pre-emption to those, but the
FCC declined. Hope that the association's attorney doesn't discover
that.

I have an old MFJ VHF converter I am looking to get rid of.

This thing plugs on a 2m HT and allows it to receive from 154-164 MHz.
Obviously, with most of the newer radios, this isn't much use anymore,
but I will sell it cheap if some one has an old radio they could use
it on.

For Sale: Ameritron AL-1500
Brand New. Never Used. As shipped from factory: Transformer and the Triode tube are included but not installed. Purchased for $2,600. Best offer will take it. Must sell, any offer within reason will be considered.

Specifications:

Full Power Linear Amplifier. The Ameritron AL-1500 is a 1500 Watt output linear amlifier that oprates from 160 through 15 meters. It uses a single 3CX1500A7/8877 tube in a class AB2 grounded grid circuit. CW, FM and TTY efficiency is improved by shifting the bias deeper into class B. He heavy duty power supply and RF components, combined with a forced air system utilizing a chimney, proved long service love for expensive components. The AL-1500 is shipped factory wired for 240 volt, 50/60 Hz Power mains.

>
> Sounds like you are getting some coupling with the antenna and the power
line's. Not a lot you can do about it, unless you want to spend a LONG
time helping the power company isolate it. Good luck. I would suggest
you consider a MFJ-1025, or the 1026 (built in pre-amp). It is a device
takes the noise and eliminates it by phasing it out before it gets to
the radio front end. Considering your apparant invironment Id suggest
the one with the built in preamp. That way you should be able to receive
the noise locally with it and the main antenna. This is required to phase
the crap out.

September 28, 1998

Michigan House Resolution 379, released on September 24, is a small "victory" for free radio broadcasters across the country.

In the resolution, the Michigan House of Representatives encourages the Federal Communications Commission to once again issue licenses to low power broadcasters, operating under 100-watts. The Commission ceased issuing such licenses in 1978.

For more information, including the complete text of the resolution, visit the W8MMQ web site at http://www.qsl.net/w8mmq/. Once in the site, click on the Free Radio section at the top. You will also find information under the Features section.

Folks,

I am interested to find out what the outcome of this issue has been. Prior
to reading your posting, I purchased one of the ICOM W32A units from HRO and
it seems to work fine with it's included antenna. I have a multiband
magnetic antenna that I was trying out, and I observed the same recieve
signal attenuation that was mentioned in the post. Is there some odd antenna

impedance for this unit? I had always assumed that the output would be 50 ohms....(That's what is says in the specification sheet anyway...) Has ICOM America been contacted?

Hi Curt and the group,

I too am interested in this problem with the Icom W-32A. I have never had a chance to use the radio with an external antenna, only as itself. It scares me to think that there would be a problem with the connection at the top, or some impedance mismatch. Radio seems to be great as itself, hate to think it has a problem. But if it does, would be interested to see what Icom has to say about it. Good luck to you and all other Icom W-32A owners. I am gonna check this one out later and see what I find with it.

Cheers!

Joe

4902. Heath Cantenna - contains PCB'S????

Around 1975 I bought a Heath cantenna and filled it with transformer oil I obtained from Barcraft Electric Supply.

Anyone have any knowledge of whether or not this oil is likely to contain PCB's ???

I'm not sure when PCB's were removed from transformer oil.

Thanks
Doug

>and it is annoying.

This is a harmonic of the reference crystal oscillator in the Touchtone pad. They all have it to one degree or another. You can try to improve shielding and bypassing, but the simple solution is to just put a gimmick capacitor across the TT pad crystal (TV colorburst frequency), and rubber it so the harmonic doesn't fall on 146.76 MHz. You can't pull it far enough to throw the TT pad tones off frequency enough to make them not work, but you can certainly pull it far enough to get the harmonic off of 146.76 MHz.

4908. Kenwood TS-530S problem

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-28 00:00:00 UTC
From: Rod Murray <rmurray@mitre.org>
Message-ID: <360FA466.3374@mitre.org>
Source record: 161072

I have a Kenwood TS-530 that I bought at a Hamfest and it is behaving a little bit strangely. When tuning up (Either into a dummy load or an antenna), I peak the drive, dip the plate then attempt to peak the load. When I do this, the meter is in RF mode but shows very little deflection (maybe 60 mA) Peak loading is always as far CCW as I can turn the knob. I seem to be radiating though. I had a qso with a station in Binghamton NY from Derry, NH on 80M SSB.

Also, in receive mode, the S meter pegs if I turn the rf gain down! If I turn it all the way back up again, it seems to be OK.

Any thoughts would be appreciated.

> simplex. Oh well - something about Old Dogs, New Tricks...

Jeffrey,

Several UHF/VHF bands have such frequencies, especially in the "weak signal" portions of the bands, such as at 50.125, 144.200, 222.100, 432.100, 902.100, 903.100, etc. Also in the "FM" portions of 2M we have 146.52, etc., which are designated calling and listening frequencies. The "LiTZ" and "Wilderness Protocol" distress calling arrangements are both associated with the 146.52 national calling frequency.

On HF 7290 and 14286 are designated calling frequencies, but seldom observed.

So much for "Old Dogs"....

Sounds like a weak driver.

It's supposed to do that. When you turn down the RF gain, what you're
actually doing is increasing the AGC voltage, and that's what the S meter
reads. So the S meter will go up when you turn the RF gain down.

Folks,

As a follow-up to the discussion about the W32A's external antenna problem -- I spoke to a representative from HRO and was told that this was most likely a receiver desensing problem brought about by an RF-rich environment (pager transmitters...etc in the area). Other hand-helds are supposed to be less immune to this sort of interference than the W32A, but all such units are supposed to be affected in one way or another. I'm going to check this out in various locations to see if there is any correlation with QTH. I no longer think that the problem is impedance related. It will be interesting to get more data on this point.

-- If you have an ICOM W32A, please report any receiver problems associated with external antennas to this news group -- Give details.

4914. KENWOOD TS130S MIC GAIN PROBLEM

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-28 00:00:00 UTC
From: Ed Lyons <elyons@sympatico.ca>
Message-ID: <360F7B8A.1C40C6CA@sympatico.ca>
Source record: 161078

I have just purchased this nice little ts130s radio and found that the carrier gain and the mic gain pots (all in one package) are very sensitive to small movement. For example from 1 to 10 settings, I have to put these controls to about 2 to bring down the carrier and once it starts coming down it almost jumps to 0w and same thing for the mic gain. I am assuming right now that this pot is not a 10 times turn pot but I may be mistaking. The person that sold me this unit is in the middle of moving and does not have the manual handy. Everything looks original in the radio and seems like nothing has been modified.
Has anyone seen this problem before?

Question is am I going have to change this pot or is there an internal adjustment to correct for this?

4915. Age discrimination at General Motors/Delco Electronics (now Delphi).

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-28 00:00:00 UTC
From: Gary Lee Calvert <gcalvert@iquest.net>
Message-ID: <6uodk4ota1@news.iquest.net>
Source record: 161079

In the last weeks I have left... 73's de WB9SMX

I am posting to news groups, writing letters, and Emailing every one and every place I can to make the world aware of the age discrimination I endured at General Motors/Delco Electronics (now Delphi).

I hope you, your children, or grandchildren never have to experience what I have been put though.

My situation has become grave because:
I have been out of work for nearly a year now.
My unemployment benefits have nearly run out.
Family Social Services Administration says that my medications are not covered for calculating my welfare (never thought I'd be there!).
They also don't include the auto insurance that is now required by Indiana Law. Nor other needs like the taxes and fixing brakes on an old 92 mini van with over 120,000 miles and so-on. As a result my wife and I get a whole $10 per month assistance with $200 a week unemployment that is soon to be ended.
I have been an insulin dependent diabetic for many years.
The diabetes have caused a neuropathy in my feet and for several years and as a result I have taken medication to relieve some of the constant pain in my feet so I can walk.
I have had a disk removed from my lower back, and doing manual labor tasks like I used to is no longer possible.
These were not problems for my old job where most of the day was spent typing on a keyboard and RARELY working in the Lab.
Most disheartening is that my Son is in his second year at college and I have no way of helping him financially.
I expect that I will succumb due to lack of funds to buy medication or food after my charitable income from the government ends.

What little settlement I got from them was used in paying off all our outstanding debts. Like vehicle, mobile home, old school loans, taxes, etc..

I have sent my story to the large TV networks, but I am only one of probably thousands of stories they get. AND I am only a middle aged white male against General Motors/Delco Electronics (now Delphi) the largest purchaser of TV/Radio/newspaper advertising in the world.

How powerful this must make them feel and how nonchalantly they continue to act with impunity because of their financial strangle hold on any news organization that would hold them up for the world to see them as they really are.

They boast about all their contributions to charities, music/art organizations, PBS shows, etc. but they don't go out of their way to tell you what they do to an employee if he is getting older and has medical costs that use money from the "self insured" program managed by Blue Cross Blue Shield or another company.

The lawyers I hired at Kendall Law Office (Mr. Michael C. Kendall, Stephanie Jane Hahn #18674-64, and Jeffrey D. Hawkins #19387-49) in Indianapolis Indiana betrayed my written requests and the legal system failed to see that my case was heard by a jury trial. And they settled my case with no genuine way of maintaining an income, sufficient money, or retirement to continue to meet my need of surviving.

If you think your protected with the age discrimination act you better think again.

Details and proof are available at my web site for the remainder of the year http://members.iquest.net/~gcalvert/age1.html or until General Motors/Delco Electronics (now Delphi) intimidates my Internet Provider into unplugging my account.

General Motors/Delco Electronics (now Delphi) has succeeded in destroying my career by not allowing me to have the same opportunities and newer younger employees. As a software engineer it was imperative that I was allowed to work on new projects with new technology to maintain my skills as the newer younger employees did.
My skills are so minuscule that I can not even get a technicians job at half the income I used to have.

General Motors/Delco Electronics (now Delphi) delayed my settlement payment just long enough so I could not get into a class last January.
Even if I did get some more training, who would hire me with diabetes, a bad back, sore feet, and 50 years old? General Motors/Delco Electronics (now Delphi) wouldn't keep me why would anyone else?

Please don't send criticism unless you have read the documents and photos at my web site. http://members.iquest.net/~gcalvert/age1.html

If you know of anyone who is planning a career at General Motors/Delco Electronics (now Delphi), be sure to have them check my web site.

Now that this information is being sent out for the public to read I have the last of my affairs in order.

Thank you.

4917. Hurricane Freq's ????

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-28 00:00:00 UTC
From: jimd7002@aol.com
Message-ID: <19980928124637.15487.00005402@ng68.aol.com>
Source record: 161081

I've gotten tons of lists of hurricane freqs from this and other NG's. However, I can't seem to ever hear anything on the appointed freqs. Usually I hear other hams talking about politics or anything BUT hurricane stuff. I've checked my freq settings, tried different radios but nothing ever comes across. Is there a time schedule for the nets to be up on these freqs? If anyone has this schedule, please post it for the rest of us.

Also, I tuned into the freqs set aside by the latest ARRL bulletin for emergency traffic, but again, all I heard was a couple of hams talking about some car repairs one had done on his car!! I thought these freqs were not supposed to be used for anything but emergency traffic nets? There was plenty of room above and below the freq, it seemed that they just wanted to talk on that freq.

Answers anyone??

Thanks....

Jim

A crystal for 27Mhz would need to be purchased and put either in the AUX position or put in one of the 10meter positions. I recommend the 10D slot because that goes from 29.5 to 29.999 which is an area primarily for FM which this rig is not equipped. Let a technician do it, it is the P.C. board on the bottom and the crystals are soldered in.

GOOD LUCK!!

Simply untrue. No license of any sort is required to own a radio transmitter of any sort in the US. Ownership without a license is not an offense (or offence either). Transmitting without a license for the service involved is an offense (and an offence also if the signal is heard in Oz).

It's a moot point once the pre-emption issue is raised.

Any competent attorney will check it out, as we found out in
the _Hotz v Rich_ case about 5 years ago, where the Appellate
Court research attorney actually READ PRB-1 and found out that
it didn't apply to CC&Rs, so the ham (Jimmy Rich) lost and had
to take his 75 foot tower down.

Good luck, as the other poster said, those are kinda low prices for
those rigs. Even the 430 can still bring up to 500 or so. But look
around , you can find deals here and there. Now, I have a Icom 730, that
I see lots of those for sale around 350-375. And they are good rigs. But
usually you will have to pay a bit more for a 430. BTW, my 730,not for
sale.. Good luck.. MK

4924. Youth Amateur Radio WWW meeting site

From: k0hb@juno.COM
Message-ID: <19980928.020518.11950.0.k0hb@juno.com>
Source record: 161088

>From ARRL Letter ---

A new page on ARRLWeb aims to take advantage of youth interests in computers and the Internet to offer younger hams a place to get together online to arrange on-the-air schedules. Amateur Radio youth groups can just visit the Youth Skeds Database at http://www.arrl.org/ead/youthskeds/ and make skeds with other schools or young people's groups. The ARRL Educational Activities Department credits Phil Downes, N1IFP, for coming up with the idea. Regardless of age, grade level, school or group affiliation, youngsters worldwide can register at this site. This adds them to the list of groups wishing to get acquainted with others via Amateur Radio.

"The purpose of this particular ARRLWeb page is to answer a growing need, thanks to the wide Amateur Radio interest on the Internet," said ARRL Educational Activities Correspondent Dan Miller, K3UFG. "This is a meeting place for youth groups wishing to interact, and contact each other via Amateur Radio. This can be schools at any level, or scouts, or CAP, or any youth auxiliary club."

At the Youth Skeds home page, entering a state (without entering a city) makes it possible to scan a statewide list of groups who have registered. Or you can pinpoint an area by entering a city and state.

"This is a brand new service of the ARRL and is available to all Amateur Radio youth groups, whether they are affiliated with the ARRL or not," Miller said. "Of course, becoming affiliated would provide additional benefits, but the decision is theirs."

Miller says he'll be happy to provide additional information. Call him at 860-594-0340; e-mail dmiller@arrl.org.

You don't need to buy Internet access to use free Internet e-mail.
Get completely free e-mail from Juno at http://www.juno.com
Or call Juno at (800) 654-JUNO [654-5866]

>Protocol" distress calling arrangements are both associated with the 146.52
>national calling frequency.
>On HF 7290 and 14286 are designated calling frequencies, but seldom observed.
>So much for "Old Dogs"....

"...but seldom observed" sums it up quite well, Hans. The entire world-
wide maritime community without exception observed the calling frequency
concept for the 65+ years of its existence; no such world-wide discipline
would ever exist on the ham bands.

(In preparing for the maritime radio license exam one was continuously
reminded of the calling frequency scheme.)

Maybe it's not fair to compare the two services, though, for the maritime
service is not as "frequency agile" as the amateur service; their xmtrs
are "channelized." Also, safety of life at sea demands that all ships
and shore stations monitor a single frequency all the time; you can't go
frequency-searching for help when you're in distress.

From ARRL Headquarters
Newington CT September 28, 1998
To all radio amateurs

SB QST ARL ARLB080
ARLB080 Mississippi hams counter Georges with regional response

Hurricane Georges already has worn out his welcome, but he's not out of steam. After devastating several Caribbean ports of call and clobbering the Florida Keys last week, Georges spent the weekend regaining strength in the Gulf of Mexico. Heavy rains and high winds along the Gulf Coast, including the Florida Panhandle, Alabama, Louisiana, and Mississippi, presaged the storm's landfall early Monday morning near Biloxi, Mississippi.

The storm has been packing 105 MPH winds, but gusts of up to 176 MPH were reported at Keesler Air Force Base at Biloxi. Rain totals of 25 inches along the hurricane's track were expected. Tornadoes spawned by the storm struck shelters in Pascagoula and Gautier, Mississippi, but no one was hurt. Concern for flooding prompted the evacuation of more than 1-million people from New Orleans and vicinity. New Orleans, which has a system of federally operated dikes and levees, is below sea level and vulnerable to flooding. However, the storm and its copious rainfall has centered more to the east, sparing ''The Big Easy.''

The FCC on Sunday declared a communications emergency in Mississippi, Louisiana, and Texas to clear 7285 and 7290 kHz during the day and 3873 and 3935 kHz after dark (3 kHz) for emergency traffic only. Mississippi Section Manager Malcolm Keown says hams in Mississippi, Texas, and Louisiana have been cooperating in the storm response. The net on 7285 and 3873 has been handling emergency traffic for the region. The net on 7290 and 3935, run by South Texas SM Ray Taylor, N5NAV, is handling health-and-welfare traffic.

''Disasters don't stop at section lines,'' Keown said. ''It's been a very good cooperative effort, so this has been a very good demonstration on how folks can get together and make it all work.'' He says hams also are cooperating with the Mississippi Emergency

Management Agency and the Red Cross.

Keown says many Mississippi repeaters have been linked for the first time as well, so hams throughout the region can participate in the emergency response on VHF and UHF.

Only last week, Keown said, hams in Mississippi held their Simulated Emergency Test that included a mock response to a storm similar to the one actually occurring this week.

Hams in Mississippi and elsewhere in the affected region have been filing weather condition reports to W4EHW at the National Hurricane Center via the Hurricane Watch Net on 14.325 MHz. The Hurricane Watch Net has been in nearly continuous operation for the past 10 days. The Friendly Caribus Net on 14.283 MHz has handled health-and-welfare inquiries.

In Alabama, SEC Joey Carter, AE4WP, reported hams were busy. ''Mobile and Baldwin counties are getting pounded, but early reports contain no major damage,'' he said. ''There are some power outages, some telephones out, and lots of water over roadways, but no major structural damage.'' The Alabama Emergency Net is active on 3935 kHz.

In Northern Florida, SEC Nils Millergren, WA4NDA, reported shelters open in three counties with more than 3000 people in Escambia County alone taking refuge. Major flooding occurred in Escambia, the state's westernmost county. Shelters also were open in neighboring Santa Rosa County and in Hernando County further down the Gulf Coast. Millergren said a VHF net was open for West Panhandle District traffic. Hams were not expected to staff shelters unless commercial communication was lost or help was requested. He reports flooding has closed some roads and bridges. ARES was reported available for emergency communication to the western panhandle counties.

In Puerto Rico, which suffered heavy damage at the hands of Georges, hams have continued to help, especially in areas where conventional communication is out. ARES member Victor Madera, KP4PQ, reports thousands still in shelters, but ''FEMA and Red Cross are doing wonders.'' Most amateur storm recovery activity in Puerto Rico has been on VHF, he said. ''Power is back in about 50 percent of the island,'' he said. Central Puerto Rico was the worst-affected region because of the mountainous terrain. Power lines knocked out there have been difficult to reach to repair. Telephone service is spotty in some parts of the Commonwealth.

It's been reported that tens of thousands of Caribbean residents took refuge in shelters. Even so, more than 300 deaths now have been reported throughout the Caribbean, many of them in the Dominican Republic and Haiti.

>Thank you very much for the detail descriptions. Sounds like I should
>be looking at the Icom 2710 instead. However, the 2710 cost a lot
>more than than the Yaesu 8500 does it not?

The 2710 is much more expensive. I suggested comparing the 207 and
the 2710 to give you an idea of the "pure" difference between a
single-receive and a dual-receive dual-band radio while keeping
the manufacturer the same for simplicity. Comparing the 207 to the
FT-8500, you are seeing differences between single-receive and
dual-receive mixed in with differences between Icom and Yaesu design
philosophies.

>Which one are you getting?

I'm probably not getting either until finances improve somewhat.

I haven't decided between them. The 207 is cheaper once you buy the
faceplate separation cable, and the smaller faceplate will help
mounting in my Honda Civic. And one band at a time is fine for
actually talking in the car (I have a FT-50 which is single-receive,
and I don't mind that).

The one real significant advantage of the 8500, for me, is that it
does crossband repeat. This isn't useful sitting in the car, but
it *is* useful if you are operating on foot somewhere near your
car and need more power than the handheld provides to get a good
signal into a repeater somewhere. You set up the handheld to
transmit at very low power on UHF and have the car retransmit
that on VHF (or reverse the two bands if the repeater is on UHF).
You might well be able to use only 5 W in the car, into the roof-mounted
antenna that is much more efficient than the HT antenna.

I have also heard people say that the 8500 is more intermod resistant,
but I haven't any direct experience with that myself.

Dave

I have some of those old 73 magazines from the days when it was
as fat as a small town's phone book.
In 1982 I converted a Lafayette 23ch SSB radio into a 10 meter rig
with a crystal kit from International. It worked great, I used to
drive around in my car talking to Australia on a Big Stick
antenna. Unfortunately, those were the days when it was felt that
the 10 meter band needed a half a Megahertz of CW-only space,
so my converted rig didn't go lower than 28.5 Mhz. I traded it
away for two surplus portable 225-325Mhz AM transceivers with
quick heat filaments on the transmit tubes. I still have these,
but I sometimes wonder who has the Lafayette rig now...

I can't address the issues you raise in your reply. However, in my case the current restriction is "No visible radio or television antenna shall be permitted without the written approvalof the Architectural Control Committee."

This restriction is clearly in conflict with Federal Law. If requested, the FCC would preempt the restriction. Once preempted, would this not open up the can of worms in regards to all antennas?

4931. Loss of RX with Icom T7A

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-29 00:00:00 UTC

Source record: 160945
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I was wondering if anyone has experienced the same phenomenon with their T7A?

The radio is rarely used; it's my wife's. The other day I woke up and grabbed it to listen to NOAA weather report. I tuned into the local NOAA weather radio frequency, and listened for a while. After about 4 minutes or so, the S-meter started jumping erratically, and the receive became so broken, and then the receive almost completely dropped off.

I went to the scanner in the living room, and the NOAA weather transmitter was transmitting fine, as usual. I grabbed my Z1A, which gets used A LOT, and that same freq was fine on that radio.

Any ideas? The battery in the T7A was fine, and I even tried a fresh one, but it made no difference. I hooked the T7A up to my external antenna, and the same thing occurred.

Any advice is more than welcome. Please email me directly, as I don't get a chance to jump on the NG all that often.

Thanks and 73,

Chad Johnston, KI8CU

Three words: Don't buy Icom.

Their quality control is lacking, and the only thing they stand behind after the sale is their voicemail system, which prevents you from talking to humans.

I owned an Icom 2700 (predecessor to the 2710) which went in for repairs 4 times under warranty, each time coming back with bigger problems than it went in with. The 2710 is a little better, but not much... Hot audio, flimsy mic, expensive PC programming hardware/software.

I dumped both my 2700 and 2710 in favor of a Yaesu FT-8500. The big mic with the joystick (the "Mr. Potato Head" mic) is intimidating at first, but after a short learning curve (less than a week of daily use), you'll be using the radio like a pro. It's built to last, has alphanumerics, and is menu driven to make changing settings easy. MUCH easier to use than the Icom 2710, and cheaper too... $400 for the radio, $60 for PL decode, $60 for the remote kit, and $40 for the programming cable and software. I doubt you could do better for less, and I'm not sure you could do better for more money.

I'm guessing the radio didn't sell well due to the Mr. Potato Head mic (the smaller palm mic is a pain to use, but looks more "normal"), and that's why it's so cheap now..

4933. ARLB081 FCC shifts Amateur enforcement duties

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-29 00:00:00 UTC
From: w1aw@arrl.org
Message-ID: <$arlb081.1998@arrl.org>
Source record: 160947
Cross-posted to: rec.radio.info,rec.radio.amateur.misc

SB QST @ ARL $ARLB081
ARLB081 FCC shifts Amateur enforcement duties

ZCZC AG81
QST de W1AW
ARRL Bulletin 81 ARLB081
From ARRL Headquarters
Newington CT September 29, 1998
To all radio amateurs

SB QST ARL ARLB081
ARLB081 FCC shifts Amateur enforcement duties

The Federal Communications Commission has announced a change in how it handles Amateur Radio Service enforcement actions. On September 1, all investigation, evaluation, and processing of Amateur Radio-related enforcement matters were transferred to the Compliance and Information Bureau. The change was made ''by internal arrangement'' between the CIB and the FCC's Wireless Telecommunications Bureau. The Wireless Bureau handles amateur licensing and, for the past several years, has shared enforcement duties with the CIB.

The main objective of the change, the FCC said, was to ''facilitate the Commission's pursuit of compliance,'' especially in the area of resolving interference complaints, a hot-button issue within the amateur community.

''Amateur enforcement should have gotten more direct attention over the years,'' conceded Riley Hollingsworth, K4ZDH, the CIB's legal advisor for enforcement. ''A lot of people think the FCC doesn't care.''

Hollingsworth will be the FCC's point man in handling the complaints. He says FCC Chairman William Kennard ''wants greater respect with respect to enforcement'' at the FCC. Hollingsworth said putting enforcement in the CIB's hands should mean ''a much faster, more effective response.''

ARRL General Counsel Chris Imlay, W3KD, says he's ''cautiously optimistic'' that the change will improve the dismal amateur enforcement situation. ''Now, CIB doesn't have to just gather evidence and forward it to another bureau,'' Imlay said. ''It can act on it when it is ready. That's a good situation compared to where we were.''

The FCC's public notice-issued nearly a month after the change-said the CIB staff now handles Amateur Radio enforcement matters ''from initiation to resolution.'' That includes complaints, amateur testing issues, warnings, monetary penalties, revocation hearings, and ''in extreme cases'' equipment seizure and prosecution through the Department of Justice.

The Wireless Bureau continues to handle Amateur Radio licensing, including new applications and renewals, as well as all Amateur Radio policy and rulemaking matters. The change is expected to have no impact on the Amateur Auxiliary.

Under the new arrangement, all amateur enforcement questions and complaints should be directed to the Compliance and Information Bureau, Compliance Division, Attention: Amateur Complaints, 1919 M St, Mail Stop 1500E1, Washington, DC 20554.

The FCC also has instituted an ''Amateur Enforcement Line'' at 202-418-1184. The automated system prompts callers to leave a name, a number, and a brief message. A CIB staffer is supposed to return the call within the next business day.

To all radio amateurs

SB QST ARL ARLB082
ARLB082 Hurricane Watch Net closes; Georges languishes on Gulf Coast

With Hurricane Georges downgraded to a tropical storm, the Hurricane Watch Net on 14.325 MHz has finally been able to end its marathon operation. ''Our business is done,'' said Net Manager Jerry Herman, N3BDW, as he got word of the storm's new status September 28. ''It went well.''

The Hurricane Watch Net had remained active for about 10 days straight as Georges moved from the Caribbean to the Gulf of Mexico, passing weather-related information via W4EHW at the National Hurricane Center in Miami.

The lengthy operation took a toll on net control operators, who became scarcer as the storm refused to quit. Herman said the net operated nearly around the clock, although 20-meter propagation was lost during nighttime hours. ''It was a long haul for our operators,'' he said. ''Every time I thought we were about ready to run out of operators, some more folks would jump back in there and do it again.''

The Hurricane Watch Net formed in 1964 after Hurricane Bestsy.

Herman called Georges ''a really unique storm that just kept going.'' At this point, Tropical Storm Georges continues generate heavy rain along the Gulf Coast. Flooding is reported in several states, especially in Louisiana, Mississippi and Alabama.

Alabama Section Emergency Coordinator Joey Carter, AE4WP, reports Mobile and Baldwin counties have been the hardest hit, and additional flooding was expected in southern Alabama, where heavy rain was reported. Carter said more than two dozen tornado warnings went up in Alabama on September 28. The Alabama Emergency Net on 3965 kHz has continued active.

''We have had a lot of folks helping out on the Emergency Net, and that has been a blessing,'' Carter said. ''We're getting good information back that we are able to send to the National Weather Service.''

Hams in Texas, Louisiana, and Mississippi were cooperating with regional HF nets for emergency and health-and-welfare traffic as well as linked VHF/UHF repeaters.

>Committee."

That restriction is not as bad as you would think, because it
opens the door to some horetrading versus a restriction that is
an outright ban on all antennas with no approval/waiver provision.

>This restriction is clearly in conflict with Federal Law.

It is not in conflict unless the approval is de-facto withheld
by unreasonable regulations or time delays.

>If requested, the FCC would preempt the restriction.

The key word is UNREASONABLE. Preemption would not be
forthcoming otherwise.

>Once preempted, would this
>not open up the can of worms in regards to all antennas?

Not at all. Step back a minute and see what the pre-emption
Order covers:

Point A - Antennas used to receive radio/TV/satellite video services

The discussion in the preemption Order was very specific that
it did not cover antennas which are used for any other purpose,
and in fact there was a discussion of whether antennas used
for a back-channel in a two-way delicery scheme were covered

(they are if the transmission function is limited to control of program delivery).

Point B - Installed on property owned or under the exclusive control of the user.

This, too, was covered in the discussion. The Order did not apply to antennas installed on "common use" property or on rental property.

Part of my law practice is consulting with and preparing standards/regulations for several local condo and townhouse associations who see the handwriting on the wall and are willing to set up reasonable regulations - including written permission from the Association - for radio/TV/satellite video receiving antennas installed on common-use property such as balconies, outside walls, and roof areas.

HAMFEST/COMPUTERFEST CALENDAR 1998 - NORTHERN ILLINOIS
last updated September 14, 1998

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, Tom Harker, and ARRL for providing some of the information.

OCTOBER 1998

Oct 4 (Sun), Wheaton, IL - Giant Computer show (see below). Dupage County Fairgrounds.

Oct 11 (Sun), Orland Park, IL Giant Computer Show & Sale * (see below). orland Park Civic Center.

Oct 17 (Sat), Grayslake, IL. Computer Country Expo (see details below). Lake County Fairgrouds.

NOVEMBER 1998

Nov 22 (Sun), Wheaton, IL. GMRS Electronics Flea Market. Dupage County Fairgrounds. Sponsored by GMRS of Illinois, Inc. Admission $5. Kids under 12 free. Open for setup at 6:30 AM. Building doors open for buyers at 8 AM. Info: (815)756-3933 or (630)393-3937.

Nov 28 (Sat), Grayslake, IL. Computer Country Expo (see details below). Lake County Fairgrouds.

DECEMBER 1998

Dec 19 (Sat), Grayslake, IL. Computer Country Expo (see details below). Lake County Fairgrouds.

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (847)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer expo. The event is held on designated Saturdays from 9:30 AM to 3:00 PM. This show features computers, supplies, games, parts, software, accessories, CD-ROM, monitors, diskettes, printers, keyboards, modems, disk drives, cables, expansion boards, services, and anything else in the domain of computers! Lake County Fairgrounds, Route 120 (Belvidere Rd.) & Route 45, in Main Exhibit Hall Building #1=9720,000 sq. feet of everything Computer! For a show map, exhibitor info, and discount coupon, visit the web site at http://www.ccxpo.com.

>
>Is that "strange"?

Misleading statements? Where do you find misleading statements in the
following?

"The idea of 500 kHz being an international calling *and* distress freq'y
was finalized at the 1932 Madrid Radio Conference (see Schroeder 1964).
I find it a shame that amateurs never implemented the idea of a calling
frequency on each band which everyone would monitor, in which short
station-to-station calls and CQs could be made, with parties moving
to another frequency for the QSO. Two-meter repeaters come close to
this idea but operators fail to QSY off the repeater to try to work
simplex. Oh well - something about Old Dogs, New Tricks..."

Do we have ITU/FCC mandated calling frequencies on each band which
everyone monitors, and where short station-to-station calls and CQs
are made, so that once contact is established stations QSY for their
QSO? Absolutely not.

The existance of "seldom observed" (your words) ARRL-designated calling
frequencies certainly does not counter the above statement.

It would temporarily, unless the FCC gave them time to rewrite during which there would be a moratorium on new antennas of any sort, they got a court order declaring a moratorium on antennas of any sort for a limited time, or they created a fall-back policy if their blanket bad was declared void by any judicial or regulatory agency.

One might hope that they are not this creative ... BTW: I missed the first part of this ... I was wondering, did you knowingly move into a place with these bizarre restrictions, or were they imposed after you arrived? 73,

4946. Re: Heath Cantenna - contains PCB'S????

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-29 00:00:00 UTC
From: bb840@scn.org
Message-ID: <F025HM.JIu@scn.org>
Source record: 160960

I'll add just a couple of quick comments:

1. I put a Heath Cantenna together in the mid 70's and bought a gallon of transformer oil at a local radio store for it. I found that having it tested to determine if it contained PCB's exceeded the cost of a new dummy load (I bought a dry one from MFJ).

2. Our area as periodic hazardous waste disposal collection sites where private citizens can take various items of hazardous waste for same disposal. No collection fees are paid. I took the Cantenna to one of these collection sites, told them it might contain PCB's, and they took it after marking it. Safely disposed.

It's very possible the transformer oil did not contain PCB's, but very likely it did. I saved the money it would have cost to test it to find out, safely disposed of it at no cost to me, and bought a new dry dummy load for $60. It would have cost more than $60 to test the oil. And the dry dummy load doesn't make a mess on the floor.

Good Luck and 73 de KD7MK

The original Heathkit DL did indeed use transformer oil that had PCB's
in it. You can dump it (safely I hope) and replace it with off the
shelf Mineral Oil. However the disapation ratings will be reduced. I
don't remember how much. I did run my SB-220 into it with no problem.

The S-meter is supposed to go up as the RF gain is turned down, so thats normal.

The LOAD problem sounds like you may have a fixed load capacitor that has gone bad. As I recall on these rigs, turn it over, take off the bottom cover, and follow the band switch shaft back under the final compartment. I believe you will see several silvered mica caps soldered to the last wafer. Find the one or ones in use for the bands which are a problem, and replace with the same value. Oh, I should have asked, is the LOAD control a problem on all bands, or just 80M?

It is quite likely that the oil does have PCB's and your average oil recycler may not be geared up to dispose of those. The laws concerning handling of waste are rather particular (and affected by CFR Title 40 for waste handling and CFR Title 49 for transportation), as someone who deals professionally with hazardous waste and hazardous material transportation I appreciate your taking the time to ask your question. The first thing you may wish to do is do a search for Barcraft on the web, if you find them go ahead and conact them and ask for a copy of the MSDS which is a Material Safety Data Sheet - this will list the chemical components and answer your PCB question. Next you should contact your local oil recyclers and inquire if they are able to handle the disposal for you, best to let them drain the can for you to minimize your risk. Oh yeah, did I forget to mention that

the total costs of this task might shock you? My cost to dispose about 5 pounds of solvent (non-carcinogenic, mixed alcohols) soaked wipes is about $120. I do not wish to dissuade you from doing the 'right thing'; just want you to be prepared for what might come. Also, many large corporations sponsor 'household hazardous waste' roundups. They do wish to have folks identify their waste as best as is possible, so that MSDS is important. Also keep in mind that if you empty the 'cantenna' yourself you should solvent flush the can and that solvent will also become hazardous waste.

Now that I have given you a fair preamble for a Masters Thesis, I recommend you visit the site shown below for the EPA - they may have some other/more useful information for you.

http://www.epa.gov/

Good Luck on your endeavor,
Howard

Jim,
As soon as I heard of the aurora I turned on the 6 meter radio, tuned through both cw (I figured cw would be the preferred mode) and voice areas of the band with my beam pointed norh by northwest. Did not hear a thing 8^{

Listening was done late evening through about 11:30 pm PDT. Having little knowledge of 'working aurora' I will presume my lack of success is due to my latitude, which is about 33 degrees in the 'RF Cesspool' of Los Angeles.

Also had gone through this ng looking for any mention of the aurora and like you found nothing.

Folks,

I have a SUN IPX workstation which I want to connect to a TNC. However, I have not been able to find patches to support AX25 KISS ... but I'm sure I've seen them out there somewhere. I have tried search engines but had no luck.

Can anyone give any pointers to either a binary (SUNOS 4.1.1) or code? If you do know, can you drop me an email as I don't get a chance to read here often.

Many Thanks

Please read part 97 again. It doesn't cover radios or frequencies used under
different services. Just radios and frequencies under part 97. Don't add
more to part 97 than what it covers, HAM RADIO.

It was in 73, in about a dozen different configurations depending on the HyGain board. There was also at least one article in QST.

73 ran perhaps 50 CB conversion articles. About a dozen years ago, I dropped Wayne Green a note asking whether he had plans to produce a compilation.

A few weeks later, I received a brief handwritten note from him asking for a proposal to do the book....

In 1998, I don't think there are enough good easily converted CBs left in the world to justify the compilation, but there are probably enough hams out there who'd buy the book that its author would earn his 15 minutes of fame.

After all, look at how long Tom Kneitel's "Surplus Conversion" books have lasted.

> Ok, this may be a dumb question, but was it originally (early part of the 20th
> century) CQD (Come Quick, Distress) or was that something else?
> Don

According to Neal McEwen, K5RW, he first use of wireless in communicating the need for assistance came in March of 1899. The East Goodwin Lightship, marking the southeastern English coast, was rammed in a fog in the early morning hours by the SS R. F. Matthews. A distress call was transmitted to a shore station at South Foreland and help was dispatched.

By 1904 there were many trans-Atlantic British ships equipped with wireless. The wireless operators came from the ranks of railroad and postal telegraphers. In England a general call on the landline wire was a "CQ." "CQ" preceded time signals and special notices. "CQ" was generally adopted by telegraph and cable stations all over the world. By using "CQ," each station receives a message from a single transmission and an economy of time and labor was realized. Naturally, "CQ," went with the operators to sea and was likewise used for a general call. This sign for "all stations" was adopted soon after wireless came into being by both ships and shore stations.

At the first international congress of wireless telegraphy in 1903, the Italians recommended the use of "SSSDDD" to be used to signal an emergency. Its use would signal all other stations to stop sending and leave the channel open for emergency traffic. Though discussed, it was not adopted. Deciding a distress signal was put on the agenda for the next meeting in 1906.

In 1904, the Marconi company filled the gap by suggesting the use of "CQD" for a distress signal. Altho generally accepted to mean, "Come Quick Danger," that is not the case. It is a general call, "CQ," followed by "D," meaning distress. A strict interpretation would be "All stations, Distress."

At the second Berlin Radiotelegraphic Conference 1906, the subject of a danger signal was again addressed. The Germans had used "SOE" as a general inquiry call and suggested its adoption as a distress call internationally. Considerable discussion ensued and there was objection because the final letter was a single dot, hard to copy in adverse conditions. The letter "S" was substituted; the thinking was that three dots, three dashes and three dots could not be misinterpreted. It was to be sent together as one string. The American distress signal "NC" for "Call for help without delay" was not adopted, although it remains as the international flag symbol for distress to this day.

The Marconi Yearbook of Wireless Telegraphy and Telephony , 1918 states, "This signal [SOS] was adopted simply on account of its easy radiation and its unmistakable character. There is no special signification in the letter themselves, and it is entirely incorrect to put full stops between them [the letters]." All the popular interpretations of "SOS," "Save or Ship," "Save Our Souls," or "Send Out Succour" are simply not valid. Stations hearing this distress call were to immediately cease handling traffic until the emergency was over and were likewise bound to answer the distress signal.

Although the use of "SOS" was officially ratified in 1908, the use of "CQD" lingered for several more years, especially in British service where it originated. It is well documented in personal accounts of Harold Bride, second Radio Officer, and in the logs of the SS Carpathia, that the Titanic first used "CQD" to call for help. When Captain Smith gave the order to radio for help, first radio officer Jack Phillips sent "CQD" six times followed by the Titanic call letters, "MGY." (By the way, the "M" prefix did not mean England like it does today, but "Marconi".) Later, at Brides suggestion, Phillips interspersed his calls with "SOS." In SOS to the Rescue, 1935, author Baarslag notes, "Although adopted intentionally in 1908, it [SOS] had not completely displaced the older 'CQD' in the British operators' affections." (It is interesting to observe that Marconi was waiting in New York to return home to England on the Titanic.)

Since PCB-bearing oil was more expensive than straight turbine oil,
transformer oil, or mineral oil, the answer probably is -- no.

Since PCB-bearing oil has a charcteristic minty, phenol-like smell, you could
sniff the cantenna and see. Believe me, if you've ever smelled PCB-bearing
oil and knew it, you'd never forget. It's a very distinctive odor.
Again, the answer probably is -- no.

Other posters have accurately described the proper disposal processes
required for PCB-bearing oil. You probably do not have this to deal
with, but if you do, remember: The greatest danger from PCB oil is from
slipping in spilled oil. The carcinogenic risk of the stuff exists, but
only if you ingest it or if you breathe its vapor or its smoke when it
is burned. Keep it contained properly, and it's safe. Like plutonium. ;)

Problem with a Cantenna is that it has a vent, but if you really did have
PCB-bearing oil you would have objected to the smell and your XYL would have
made you throw it out 20 years ago.

Hmmm, I guess you are too far South. I was just above the 46th parallel,
near Longview, WA. Interestingly, I found that the aurora signals
seemed to come from North by NorthEast on both this last event and the one
in early August. All of the visual observations were from the North
Eastern part of this continent. Is Alaska an aurora-free zone these days?
Must be that HAARP thing again :-)

Thank you very much for the detail descriptions. Sounds like I should
be looking at the Icom 2710 instead. However, the 2710 cost a lot
more than than the Yaesu 8500 does it not?

Which one are you getting?

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 30/2330Z SEPTEMBER 1998 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 30 SEPTEMBER AND FORECAST FOR 01 OCTOBER - 03 OCTOBER
STATUS INDICATORS SOL:GREEN MAG:** YELLOW ** ION: ** YELLOW (PCA)**

1A. SOLAR SUMMARY
Activity 30 Sep: Moderate

Flares Max Fadeout Begin End Freq. Sectors
M2/2N 1350UT possible lower European

Observed 10.7 cm flux/Equivalent Sunspot Number for 30 Sep: 122/75

GOES satellite data for 29 Sep
Daily Proton Fluence >1 MeV: 2.1E+06
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 2.70E+08 (moderate)
X-ray background: B2.6
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
01 Oct 02 Oct 03 Oct
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 01 Oct: 110/60
COMMENT: The M2 event was from a region beyond the west limb
of the Sun.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 30 Sep: Quiet to unsettled

Estimated Indices 30 Sep : A K
Learmonth 7 2312 2222
Fredericksburg 4
Planetary 10

Observed Indices 29 Sep : A K
Fredericksburg 6
Planetary 10 1331 2333

2B. MAGNETIC FORECAST
Date Ap Conditions
01 Oct 7 Quiet to unsettled
02 Oct 9 Quiet to unsettled

03 Oct 16 Unsettled to active
COMMENT: A small coronal hole may cause active periods 03-04
October.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
30 Sep Normal Normal Normal-poor
PCA Event : Began 1535UT 30 Sep. Currently In progress.

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
01 Oct Normal Normal Poor-fair
02 Oct Normal Normal Fair
03 Oct Normal Normal-fair Fair-poor
COMMENT: Polar HF circuits currently degraded by proton/PCA event. Also,
high latitude HF comms expected to be mildly degarded during
03-04 October due to expected mild increase in gemagnetic activity
during this interval.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
30 Sep 106

Observed Australian Regional MUFs:
Mostly near predicted monthly values, with the
exception of Darwin which was enhanced by over 50% during
local night hours.

Predicted Monthly T index for September: 89

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
01 Oct 90 near predicted monthly values
02 Oct 90 near predicted monthly values
03 Oct 90 near predicted monthly values
COMMENT: Proton/Polar cap absoprtion degrading polar HF circuits.

4982. ****TRADE: TWO MOTOROLA VOICE PAGERS****

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-30 00:00:00 UTC
From: teenham@aol.com
Message-ID: <19980929223125.12615.00001190@ng10.aol.com>
Source record: 160963

Hey,

I have two Motorola Spirit Voice Pagers (dedicated frequency recievers) for trade. Both include special "custom size" Rechargeable NiCad batteries, one "drop in" charger and one "non-drop-in" charger (the non-drop-in charger can actually charge two batteries at the same time, but you must first remove them from the receiver. The drop in charger is a single reciever charger, but you just drop the pager in and it charges--- no removal of battery.) I'll include both chargers, and of course both belt-clips. Both units work great, and and are in good condition. Both are currently set to 138.325 MHz. I have been told there is a way to change the freq to anywhere from 136-165 MHz (+ or - some) by doing some modification to it, but I just don't have the tools or knowledge for it. Would be usefull for monitoring a 2m repeater, or maybe a fire company freq when all you need to do is listen. WHAT I AM LOOKING FOR IN A TRADE: The 2m amp that RadioShack just cleared out for $29, a glass mount 2m/440 antenna (non-used, of course,) a small base 2m/440 antenna (no home-brew's please,) or just about any other ham radio related item. All offers considered. (In case you're wondering how much these recievers go for, last weekend a person at a hamfest was selling a pair of them for $45 without any charger and one battery.) *ALL OFFERS CONSIDERED* Please drop me an email.

October 2, 1998
Target: rec.radio.amateur.misc

Note: due to the amount of information available this week, the following is your advanced copy of The RSCM Wire. There will be two newsletters this week.

Welcome to The RSCM Wire, for October 2! This newsletter is distributed each Friday by the Radio Society of Central Michigan. Please feel free to distribute this newsletter to others, so long as credit is given in some way to the Society, or W8MMQ. Thank you.

For other amateur radio news, information, and links, be sure to visit our web site at http://www.qsl.net/rscm/. This site is updated on a regular basis, and may contain some information that did not make it into this issue of The RSCM Wire.

In this issue: the FCC has shifted the way that it handles amateur radio enforcement; a communications emergency is declared; the Michigan House of Representatives supports low power broadcasting; and much more!

CHANGES AT THE FCC
The Federal Communications Commission has changed the way that it handles enforcement of the amateur radio service. In a statement released in the September 28 issue of the Daily Digest, the Commission says that all "investigation, evaluation and processing of radio amateur related enforcement matters have been transferred" to the Compliance and Information Bureau:

"The Federal Communications Commission announced today a change in the handling of enforcement actions concerning the Amateur Radio Service. By internal arrangement between the FCC's Compliance and Information Bureau (CIB) and the FCC's Wireless Telecommunications Bureau (WTB), as of September 1, 1998, all investigation, evaluation and processing of radio amateur related enforcement matters have been transferred to the CIB."

The ARRL is reporting that the FCC has established an Enforcement Line, available at 202/418-1184. Callers will be prompted to leave a name, telephone number, and brief message, and a CIB official will return their call within one business day.

For more information on the FCC and its daily activities, you can read the Daily Digest online, at http://www.fcc.gov/. You can also subscribe to the Digest by email.

COMMUNICATIONS EMERGENCY DECLARED
In a September 27 bulletin issued by the American Radio Relay League, it

is announced that the FCC has declared a communications emergency, effective September 27, until further notice:

"Under the authority of Section 97.401 of the Federal Communications Commission's rules and regulations, 47 C.F.R. Part 97, a communications emergency is declared to exist in the Mississippi, Louisiana, and Texas areas, requiring the protection of amateur emergency communication frequencies. Amateurs are required to refrain from using 7285 and 7290, daytime, and 3873 and 3935, nighttime, plus or minus 3-kHz unless they are taking part in the handling of emergency traffic. This order is effective 1100 AM Central Standard Time on September 27, until rescinded."

This order was issued as a result of Hurricane Georges, which made landfall on Monday, September 28. We will have more on this story as it becomes available.

HURRICANE GEORGES DOWNGRADED
The hurricane that sparked the communications emergency order was downgraded to a tropical storm on Tuesday. As a result, the Hurricane Watch Net, which has operated on a regular basis over the last few weeks, now has time to rest. The net operates on 14.325-MHz.

During every hurricane, members of the Hurricane Watch Net gather together and provide quick and reliable data to the National Weather Service, local law enforcement, as well as other agencies.

The members of the Hurricane Watch Net give us just one example of the many aspects of this wonderful hobby, amateur radio. It is a public service, there to assist in time of need, and events such as this certainly show that.

These people should be commended for their willingness to participate, even when their own lives could be in jeopardy.

RSCM OPPOSES NEW LICENSE STRUCTURE PROPOSALS
The Radio Society of Central Michigan has formally announced its opposition to recent proposals released by the Federal Communications Commission, and the American Radio Relay League.

In their proposals, both the FCC and the ARRL call for a reduction in Morse code requirements for high frequency operations. The Radio Society of Central Michigan feels that these announcements will only bring about increased problems on the high frequencies used by amateur radio operators.

There are already existing problems in the amateur radio service, and we feel that the Commission should seek ways of resolving these problems, before attempting new changes that will only bring about additional problems.

For complete information, you may read our letter to the Commission at http://www.qsl.net/rscm/oppose.html.

MI HOUSE SUPPORTS LOW POWER BROADCASTING
The Michigan House of Representatives is now supporting licensed low power broadcasting, and is encouraging the FCC to once again begin issuing licenses to stations under 100-watts, which the Commission ceased doing in 1978.

House resolution 379 (H.R. 379) calls upon the FCC to "restore approval for low power FM radio broadcasting."

The following information was taken from the September 24 issue of the Michigan Legislature Journal of the House:

"Representatives Freeman, Baade, Ciaramitaro, Kelly, Tesanovich, Profit, Dobronski, Prusi, Gubow, Kukuk, Bodem, Godchaux, Leland, Olshove, Harder, Hale, Brater, Parks, Anthony, Scranton, Schermesser, Martinez, Kilpatrick, Bogardus, Jelinek, Scott, DeHart, Basham, Willard, Baird, Murphy, Birkholz, Richner, LaForge, Quarles, Hanley, Cherry and Varga offered the following resolution:

House Resolution No. 379

A resolution to encourage the Federal Communications Commission to restore approval for low power FM radio broadcasting.

Whereas, For many years, low power radio stations filled a unique niche in the communications needs of local communities. These operations, which used less than 100 watts of power, were licensed as Class D FM stations; and

Whereas, In 1978, The Federal Communications Commission made a policy decision to stop licensing low power radio stations. This decision was based on concerns that low power stations were a hindrance to the orderly development of FM radio and a potential impediment to the efficient operation of facilities serving greater numbers of people; and

Whereas, In recent years, the rate of consolidation in the radio broadcast market has increased. As a result, far fewer locally based radio stations have programming that serves their communities. These concerns have prompted many people to promote a change in FCC policies. A petition of rulemaking, which proposes the reestablishment of low power FM broadcast services, is currently under consideration; and

Whereas, Allowing low power FM radio to return to the airways will achieve several worthwhile goals in communications options open to people in our country. These community radio services will increase the local presence in the media, increase diversity of ownership, provide more choices to the public, offer new opportunities in business, and promote communications that better reflect the character and needs of our communities; now, therefore, be it

Resolved by the House of Representatives, That we encourage the Federal Communications Commission to restore approval for low power FM radio broadcasting; and be it further

Resolved, That copies of this resolution be transmitted to the Federal Communications Commission.

The resolution was referred to the Committee on Public Utilities."

AMATEUR RADIO RESOURCE SITE OF THE WEEK
Each week, we feature a web site that offers useful information pertaining to the amateur radio hobby. We welcome any suggestions that you might have. Simply email the URL and site title to rscm@hotmail.com. Thanks!

This week we feature DXTRA, the Radio Amateur's Premier Online DX Journal. This web site is put together by Chuck/K8ICW, and offers a wide variety of information pertaining to amateur radio "dxing."

The site is updated on a regular basis, and is a must for anyone interested in DX, and quick, accurate DX reports.

Be sure to stop by at the DXTRA web site, at http://members.tripod.com/~CYBERHAM, and let them know you found out about their site through this newsletter!

UPCOMING AMATEUR RADIO CONTESTS
For complete contest information, visit the ARRL Contest Calendar, on the internet at http://www.arrl.org/contests/.

California QSO Party
The California QSO Party will be held from 1600-Z October 3 through 2200-Z on October 4. Work stations once per band, and mode.

For additional information, visit http://www.cqp.com/. You may also contact cqp@contesting.com.

The RSGB 21/28 Mhz Contest (Phone)
The Radio Society of Great Britain's 21/28-MHz Contest will run from 0700-Z until 1900-Z on October 4. Exchange RST and serial number.

For additional information, visit the RSGB's web site at http://www.rsgb.org.uk/.

AND ... IN CLOSING
Thank you for reading this issue of The RSCM Wire. We would appreciate any comments or questions that you may have for us. Please direct them to Dan/W8MMQ at rscm@hotmail.com. Thank you.

Information from the following news sources was used in the production of this newsletter: Amateur Radio Newsline, The ARRL Letter, and The FCC Daily Digest.

For more information on the Radio Society of Central Michigan, be sure to visit our web site at http://www.qsl.net/rscm/.

If you have any information that you would like to contribute to this newsletter, you may email Dan/W8MMQ at w8mmq@juno.com. We will review all information submitted to us, and consider it for use in the newsletter.

4991. FT-1000MP

Newsgroup: rec.radio.amateur.misc
Date: 1998-09-30 00:00:00 UTC
From: rj3@nospam.earthlink.net
Message-ID: <3612541e.587040@news.earthlink.net>
Source record: 160972

To KM0T and others,

I did buy a Yaesu FT-1000MP, and soon after returned it....If you missed my previous posts on this, the FT-1000 has a VERY fussy antenna tuner.. It needs a very well matched antenna with an SWR of 3:1 or less.. It would barely load on an antenna that all my other radios tune with NO PROBLEM.. I even took the radio to the Yaesu repair here in California, they even suggested a different antenna for the 'low' and 'high' end of 40 where I was having the most problems..

A great solution to an antenna that has no problems loading on any frequency on 40 or 15..(ON another radio. (TS-440at)

For this kind of money, I would expect a tuner that works AT LEAST as well or forgiving as other radios like the 440 or the ICOM 746..

That's my 2 cents on the FT-1000MP. NO thanks!

Rick N1QQ

From: sugarbear@rocketmail.com
Message-ID: <6uu134$6am$1@nnrp1.dejanews.com>
Source record: 160977

Hi there

I have a Yeasu FT-101ZD rig but before I start transmitting I want to find out a few things that I'm not too sure about - it's my first HF rig. Firstly, what does 'tuning up' mean? I've heard the expression quite a lot but don't know what it means. And how do you tune up a FT-101? Secondly, what does 'Comp level' mean (it is a control on the face of the rig)? Lastly, I don't have the AC power chord for the rig. Is there anybody with information on how to build a power chord.(I can only get hold of the power socket). Answers to some or all of these questions will greatly appreciated. Thank you.

This all looks great.... CIB seems better suited to enforcement....
they give actual addresses and a dedicated phone number....

Now, will there be time/funding/other resources to actually *do*
something?

Hi John,

Welcome to amateur radio. Don't worry about being a newcomer, we all went through it for our first few contacts. Sadly we tend to forget that at some point we were all new to the air. In some areas there are round table QSOs during drive time between folks driving home. If you check into a few of these you will get to know some of the folks in the area and only have to come up with something to say every once in awhile and not every couple of minutes like on a lot of 1 on 1 repeater contacts.

For Sale

SGC-230 ATU
Brand new in the box
Sell for £200 Buyers collects or payes postage
Specs for ATU Below
Required ..Has anyone got a copy of QRZ Ham Radio CD-ROM Ver7 (JUNE 1996)
Need the files from this cd reffering to the mods for the Yaesu
FT-747...Can Anyone help??
Also need software for IBM pc for decoding Morse/RTTY That runs under Win95
and does not require any hardware.

Power Input Range: 3 to 200 watts (PEP)
Input Impedance Range: 45 to 55 ohms
VSWR: (Typical) Typically less than 2:1
DC Input Requirement: 13.8 VDC
DC Operating Range: 10 to 15 VDC
Input Current: Average: .9 amps
Random set time: Typical: less than 2 seconds
Recurrent set time: Typical: less than 10 milliseconds
Antenna Length: 8 to 80 ft., 3.3-30 MHz
25 to 80 ft., 1.6-30 MHz
Installation: Any position
Operating Temperature: -35° to + 70°C
Size: 16D x 12W x 3H inches 40.6D x 30.5 W x 7.6H
centimeters
Weight: 8 pounds (3.5 kilos)

If anyone can Help or is interested in the ATU then Email me at
Darrenbaillie@hotmail.com

Does anyone know of commerically built equipment available or techniques to increase AM Broasdcast (540-1610 KHz) signals in a building? The receivers are part of operator stations (these are not "radio" operators) that are on the interior of of a concrete building.

If you have any ideas or references, please e-mail me. I am asking here since I assume some amateurs may have experience with this.

Thanks
